POLICY BULLETIN NO. 39

TITLE: MEASLES AND RUBELLA IMMUNIZATION POLICY

Section 1. General

1.1 Scope - These rules promulgate policy and procedures regarding the requirement for measles and rubella immunization of students enrolled in colleges and universities of the State System of Higher Education.

1.2 Authority - West Virginia Code §18-26-8

1.3 Filing Date - June ²³~~22~~, 1987

1.4 Effective Date - ~~July 20~~, 1987
Aug 22

Section 2. Background

2.1 Vaccine preventable diseases (VPD's) have declined dramatically during the past 20 years as a cause of morbidity and mortality in the United States. While these declines have been dramatic, significant morbidity and some mortality from these VPDs persist. College-aged students remain particularly susceptible to measles and rubella and these diseases continue to be associated with outbreaks on college campuses. During the recent past, there have been numerous outbreaks on college campuses in the United States and some deaths have occurred at an out-of-state college campus. In view of these circumstances, the West Virginia State Director of Health requests that proof of valid measles and rubella immunization be an enrollment requirement for students enrolling in West Virginia state colleges and universities. In the interest of student health, the West Virginia Board of Regents, at the request of and in collaboration with, the West Virginia State Department of Health, establishes the following immunization policy with regard to measles and rubella.

1987 JUN 23 PM 1:30
SECRETARY'S OFFICE
F11111

Section 3. Purpose

3.1 The primary purpose of a mandatory measles and rubella immunization requirement for college and university students is to prevent the introduction and spread of these vaccine preventable diseases among students in state colleges and universities. Accordingly, these regulations require proof of immunity as a requirement for enrollment in the state institutions of higher education. The Admissions Officers shall administer the requirement as an aspect of the enrollment and registration process for their respective institutions.

Section 4. Immunization Requirement

4.1 All students of the State System of Higher Education under the jurisdiction of the West Virginia Board of Regents who were born after January 1, 1957, except those exempted by this policy statement, shall be required to provide proof of immunity to measles and rubella. To facilitate the implementation of this policy, the student shall be requested to provide proof of immunity on or before the date of enrollment. The student shall have proof of immunity by the following semester or will not be permitted to enroll in classes. See Section 8 - Enforcement.

4.2 In lieu of an immunization record signed by a physician, this requirement is satisfied if a college or university receives an official copy of the permanent health record with report of immunization transmitted to it from a high school located in West Virginia.

4.3 Immunity to measles and rubella is defined as follows:

4.3.1 Measles

4.3.1.1 The person was born before January 1, 1957; therefore, the person is considered exempt; or

4.3.1.2 Measles vaccine was administered to the person after 1967 and was given after one year of age; or

4.3.1.3 The person presents a report of immune titer or a positive antibody test proving immunity.

4.3.1.4 The person presents a history of having had the disease signed by a physician.

4.3.2 Rubella

4.3.2.1 The rubella vaccine was given after one year of age; or

4.3.2.2 The person presents a report of immune titer or a positive antibody test.

4.3.2.3 History of disease IS NOT acceptable.

Section 5. Applicability

5.1 This immunization requirement applies to all undergraduate students who are enrolling for the first time in a state college or university who are classified as full-time students. It also applies to all part-time newly enrolled students (those enrolled in fewer than 12 semester hours of coursework) who will be or are residing in college residence halls.

5.2 This immunization requirement also applies to undergraduate students who transfer in from out-of-state, regardless of undergraduate grade level.

5.3 This proof of immunity shall be required beginning with the spring semester of the 1987-88 school year commencing on or about January 1, 1988.

Section 6. Exemptions

6.1 The student may be exempted from proof of immunity or from the requirement to receive measles or rubella vaccine for three reasons: medical, religious, and student enrollment classification.

6.2 Medical exemption - Students presenting a statement from a licensed physician which certifies that the immunization is or may be detrimental to a person's health shall be exempt.

6.3 Religious exemption - If the bona fide religious beliefs of the student are contrary to these immunization requirements, the student shall be exempt. Upon submission of a written, signed and notarized statement of the bona fide religious beliefs and opposition to the immunization requirements, the person may attend college without proof of immunity. (See sample statement form at Appendix C.)

6.4 Student classification - Part-time students (those enrolled in fewer than 12 credit hours of course work) not residing in college or university residence halls and undergraduate students enrolled in off-campus programs are exempt.

Section 7. Documentation

7.1 The acceptable proof of compliance would be a document which has been filled out and signed by a licensed physician. The document should include the month, day, and year the vaccine was administered.

7.2 Acceptable proof may also be provided by the West Virginia high school attended. If a college or university receives an official copy of a student's health record with report of immunization transmitted to the college from a high school located in West Virginia, this requirement is satisfied.

Section 8. Enforcement

8.1 The student shall be required to present proof of immunity on or before the date of enrollment to the Admissions Officer.

8.2 If a certificate of immunization is not received on or before the date of enrollment, the college or university shall present a notice of deficiency to the student. The student must have the required proof of immunity on or before the date of enrollment for the next semester or the student shall not be permitted to attend the school until the required immunization, proof of immunity, or documentation of approved exemption has been provided.

Section 9. Obtaining the Report of Immunity

9.1 The student shall be informed of this requirement by the Admissions Officer of the state colleges and universities as an aspect of the enrollment process.

9.2 The student and the institution should make reasonable effort to obtain proof of immunity from:

9.2.1 The family physician or from appropriate records signed by a physician or other community health provider.

9.2.2 The West Virginia high school attended. The health record with report of immunization from any high school in West Virginia shall be accepted as proof of immunization.

9.3 The college or university should advise the student to request that the student's West Virginia high school health record be transmitted to the institution of higher education at the time that the high school transmits the final official transcript of grades to the college. The institution should also communicate with West Virginia high schools for this health record as it does to obtain official transcripts of grades.

Section 10. Obtaining and Administering Immunizations

10.1 Students who are unable to provide proof of immunity may obtain the required immunization free of charge.

10.2 The West Virginia Department of Health and county health agencies in cooperation with state colleges and universities will provide the immunizations free of charge.

10.2.1 Students may obtain the required immunization free of charge at any county health agency which administers immunizations. County Health Agencies are listed in Appendix D.

10.2.2 The State Health Department will also provide vaccine to college student health centers free of charge upon request of the institution. Thus, those institutions wishing to provide this service may do so.

10.2.3 Only those student health centers with a physician in attendance may administer these vaccines. If vaccines are to be administered, the college student health center must assure that the student is advised of appropriate medical contraindications to the immunizations. The student health physician should provide the medical exemption statement when appropriate.

Section 11. Records and Reports

11.1 The college or university shall maintain on file immunization records for all persons not exempted from this requirement for immunity to measles and rubella. These records shall be open to examination by the State Department of Health during normal business hours.

Policy Bulletin No. 39
WV Board of Regents
Procedural Rule, 18-26
Series II, Section 3

11.2 When a person transfers to another college or university within the state system of higher education, the transferring institution shall, upon appropriate request, send a copy of the person's immunization record at no cost to the college or university to which the person has transferred.

11.3 The college or university shall file an immunization report with the West Virginia Board of Regents by November 15 of each year for the fall semester and by March 15 of each year for the spring semester. This report provides a statistical summary of the immunization status of new college enrollees. See Format at Appendix A.

11.4 The West Virginia Department of Health has agreed upon request to provide college student health centers with official health and immunization records for the purpose of recording immunizations which they might administer.

11.5 The West Virginia Department of Health will also provide the information document at Appendix B for use in this immunization program.

ADOPTED: June 2, 1987

IMPORTANT INFORMATION ABOUT MEASLES, MUMPS, AND RUBELLA AND MEASLES, MUMPS, AND RUBELLA VACCINES

WHAT IS MEASLES? Measles is the most serious of the common childhood diseases. Usually it causes a rash, high fever, cough, runny nose, and watery eyes lasting 1 to 2 weeks. Sometimes it is more serious. It causes an ear infection or pneumonia in nearly 1 out of 10 children who get it. Approximately 1 child out of every 1,000 who get measles has an inflammation of the brain (encephalitis). This can lead to convulsions, deafness, or mental retardation. About 2 children in every 10,000 who get measles die from it. Measles can also cause a pregnant woman to have a miscarriage or give birth to a premature baby.

Before measles vaccine shots were available, there were hundreds of thousands of cases and hundreds of deaths each year. Nearly all children got measles by the time they were 15. Now, wide use of measles vaccine has nearly eliminated measles from the United States. However, if children are not vaccinated they have a high risk of getting measles, either now or later in life.

WHAT IS MUMPS? Mumps is a common disease of children. Usually it causes fever, headache, and inflammation of the salivary glands, which causes the cheeks to swell. Sometimes it is more serious. It causes a mild inflammation of the coverings of the brain and spinal cord (meningitis) in about 1 child in every 10 who get it. More rarely, it can cause inflammation of the brain (encephalitis) which usually goes away without leaving permanent damage. Mumps can also cause deafness. About 1 out of every 4 adolescent or adult men who get mumps develops painful inflammation and swelling of the testicles. While this condition usually goes away, on rare occasions it may cause sterility.

Before mumps vaccine shots were available, there were more than 150,000 cases each year. Now, because of the wide use of mumps vaccine, the number of cases of mumps

is much lower. However, if children are not vaccinated, they have a high risk of getting mumps.

WHAT IS RUBELLA? Rubella is also called German measles. It is a common disease of children and may also affect adults. Usually it is very mild and causes a slight fever, rash, and swelling of glands in the neck. The sickness lasts about 3 days. Sometimes, especially in adult women, there may be swelling and aching of the joints for a week or two. Very rarely, rubella can cause inflammation of the brain (encephalitis) or cause a temporary bleeding disorder (purpura).

The most serious problem with rubella is that if a pregnant woman gets this disease, there is a good chance that she may have a miscarriage or that the baby will be born crippled, blind, or with other defects. The last big rubella epidemic in the United States was in 1964. Because of that epidemic, about 25,000 children were born with serious problems such as heart defects, deafness, blindness, or mental retardation because their mothers had rubella during the pregnancy.

Before rubella vaccine shots were available, rubella was so common that most children got the disease by the time they were 15. Now, because of the wide use of rubella vaccine, the number of cases of rubella is much lower. However, if children are not vaccinated, they have a high risk of getting rubella and possibly exposing a pregnant woman to the disease. If an unvaccinated woman later becomes pregnant and catches rubella, she may have a defective baby.

Since rubella is a mild illness, many women of childbearing age do not recall if they had rubella as a child. A simple blood test can show whether a person is immune to rubella or is not protected against the disease. Overall, about one in five women of childbearing age is not protected against rubella.

Please read this carefully

MMR 3/1/83

(PLEASE READ OTHER SIDE.)

Page 8

MEASLES, MUMPS, AND RUBELLA VACCINES: The vaccines are given by injection and are very effective. Ninety percent or more of people who get the shot will have protection, probably for life. Since protection is not as likely to occur if the vaccines are given very early in life, these vaccines should be given to children after their first birthday; measles vaccine should be given at 15 months of age or older. Measles, mumps, and rubella vaccines can be given one at a time or in a combined vaccine (measles-rubella [MR], measles-mumps-rubella [MMR]) by a single shot. If they are given in combined vaccine, they should be given at 15 months of age or older.

Experts recommend that adolescents and adults—especially women of childbearing age—who are not known to be immune to rubella should receive rubella vaccine (or MMR if they might also be susceptible to measles or mumps). Women should not receive the shot if they are pregnant or might become pregnant within 3 months. There is no known risk in being vaccinated against any or all three of these diseases if you are already immune to any of them.

POSSIBLE SIDE EFFECTS FROM THE VACCINES: About 1 out of every 5 children will get a rash or slight fever lasting for a few days, 1 or 2 weeks after getting measles vaccine. Occasionally there is mild swelling of the salivary glands after mumps vaccination.

About 1 out of every 7 children who get rubella vaccine will get a rash or some swelling of the glands of the neck 1 or 2 weeks after the shot. About 1 out of every 20 children who get rubella vaccine will have some aching or swelling of the joints. This may happen anywhere from 1-3 weeks after the shot. It usually lasts only 2 or 3 days. Adults are more likely to have these problems with their joints—as many as 1 in 4 may have them. Other temporary side effects, such as pain, numbness, or tingling in the hands and feet have also occurred but are very uncommon.

Although experts are not sure, it seems that *very rarely* children who get these vaccines may have a more serious reaction, such as inflammation of the brain (encephalitis), convulsions with fever, or nerve deafness.

With any vaccine or drug, there is a possibility that allergic or other more serious reactions or even death could occur.

WARNING—SOME PERSONS SHOULD NOT TAKE THESE VACCINES WITHOUT CHECKING WITH A DOCTOR:

- Anyone who is sick right now with something more serious than a cold.
- Anyone who had an allergic reaction to eating eggs so serious that it required medical treatment (does not apply to rubella vaccine).
- Anyone with cancer, leukemia, or lymphoma.
- Anyone with a disease that lowers the body's resistance to infection.
- Anyone taking a drug that lowers the body's resistance to infection (such as cortisone, prednisone or certain anticancer drugs)
- Anyone who has received a gamma globulin (immune globulin) within the preceding 3 months.
- Anyone who had an allergic reaction to an antibiotic called neomycin so serious that it required medical treatment.

PREGNANCY: Measles, mumps, and rubella vaccines are not known to cause special problems for pregnant women or their unborn babies. However, doctors usually avoid giving any drugs or vaccines to pregnant women unless there is a specific need. To be safe, pregnant women should not get these vaccines. A woman who gets any of these vaccines should wait 3 months before getting pregnant.

Vaccinating a child whose mother is pregnant is not dangerous to the pregnancy.

QUESTIONS: If you have any questions about measles, mumps, or rubella vaccination, please ask us now or call your doctor or health department before you sign this form.

REACTIONS: If the person who received the vaccine gets sick and visits a doctor, hospital, or clinic in the 4 weeks after vaccination, please report it to:

PLEASE KEEP THIS PART OF THE INFORMATION SHEET FOR YOUR RECORDS

I have read the information on this form about measles, mumps, and rubella and measles, mumps, and rubella vaccines. I have had a chance to ask questions which were answered to my satisfaction. I believe I understand the benefits and risks of measles, mumps and rubella vaccines and request that the vaccine checked below be given to me or to the person named below for whom I am authorized to make this request.

APPENDIX C
REQUEST FOR RELIGIOUS EXEMPTION TO IMMUNIZATION
FOR MEASLES AND RUBELLA

TO: Director of Admissions

State College or University

I, _____, do hereby swear or affirm
the following:

1. My religious belief or affiliation is:

2. Based upon the tenants of this belief, I am forbidden
or opposed to immunization for measles and rubella.
3. I fully comprehend the fact that failure to possess
immunity to measles and rubella may subject me to
potentially life-threatening or serious disease which
is vaccine preventable.
4. I hereby decline to receive immunization for measles
or rubella.

Signed this _____ day of _____ 19____

(Student)

Subscribed to before me on this _____ day of _____ 19____

Notary Public

My Commission Expires: _____

COUNTY HEALTH DEPARTMENTS

Many of the listed health departments operate outreach clinics at multiple locations in their respective counties which may provide immunization services. Students or institutions may obtain information about the location of clinics and hours for administering immunization by calling the appropriate county health department.

Office of the Secretary of State
State Capitol Building
Charleston, West Virginia 25305

Dear Mr. Hartman:

Re: Procedural Rule For Meetings Of The
Health Care Cost Review Council

This is to acknowledge receipt of your memorandum of June 15, 1987, which forwarded to us a copy of the Procedural Rule For Meetings Of The Health Care Cost Review Council.

Please be advised that Enrolled Committee Substitute for House Bill 2342 which was signed by the Governor and is now in effect repealed the provision of West Virginia Code, § 16-29B-6. This repeal has the effect of eliminating and terminating the Health Care Cost Review Council. Accordingly, with the termination of the council itself the procedural rule relating to the meetings of the council should be deemed repealed by House Bill 2342.

With best regards, I remain

Very truly yours,

JOHN H. KOZAK
General Counsel
