**W. Va. Code §§29A-3B-1, et seq.; W. Va. Board of Education v. Hechler, 180 W. Va. 451; 376 S.E.2d 839
(1988)**

THE ABOVE RULE IS HEREBY ADOPTED AND FILED WITH THE SECRETARY OF STATE, THE
EFFECTIVE DATE OF THIS RULE IS

Tuesday, October 15, 2013

BY CHOOSING 'YES', I ATTEST THAT THE PREVIOUS STATEMENTS ARE TRUE AND CORRECT.

Yes

**Charles K Heinlein -- By my signature, I certify that I am the person authorized to file legislative rules, in
accordance with West Virginia Code §29A-3-11 and §39A-3-2.**

Title-Series: 126-044R

Rule Id: 9225

Document: 25308

**TITLE 126
LEGISLATIVE RULE
BOARD OF EDUCATION**

**SERIES 44R
21st CENTURY SCIENCE 9-12 CONTENT STANDARDS AND
OBJECTIVES FOR WEST VIRGINIA SCHOOLS (2520.35)**

§126-44R-1. General.

1.1. Scope. -- West Virginia Board of Education Policy 2510 provides a definition of a delivery system for, and an assessment and accountability system for, a thorough and efficient education for West Virginia public school students. Policy 2520.35 defines the content standards (or instructional goals) and objectives for science 9-12 as required by W. Va. 126CSR42 (Policy 2510).

1.2. Authority. -- W. Va. Constitution, Article XII, §2, W. Va. Code §§18-2-5 and 18-9A-22.

1.3. Filing Date. -- September 13, 2013

1.4. Effective Date. -- October 15, 2013

1.5. Repeal of former rule. -- This legislative rule amends W. Va. 126CSR44R West Virginia Board of Education Policy 2520.35 “21st Century Science 9-12 Mathematics Content Standards and Objectives for West Virginia Schools (2520.35)” filed April 16, 2010 and effective July 1, 2010.

§126-44R-2. Purpose.

2.1. This policy defines the content standards (or instructional goals) and objectives for the program of study required by Policy 2510 in science 9-12.

§126-44R-3. Incorporation by Reference.

3.1. A copy of 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools is attached and incorporated by reference into this policy. Copies may be obtained in the Office of the Secretary of State and in the West Virginia Department of Education, Office of Instruction.

§126-44R-4. Summary of the Content Standards and Objectives.

4.1. The West Virginia Board of Education has the responsibility for establishing high quality standards pertaining to all educational standards (W. Va. Code §18-9A-22). The content standards and objectives provide a focus for teachers to teach and students to learn those skills and competencies essential for future success in the workplace and further education. The document includes content standards for science, an explanation of terms, objectives that reflect a rigorous and challenging curriculum, and performance descriptors.

§126-44R-5. Severability.

5.1 If any provision of this rule or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this rule .

Foreword

A 21st century science curriculum is an increasingly important component in the development learners prepared for success in the 21st century. Thus, the West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520.35, 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools. The West Virginia Science Standards for 21st Century Learning includes 21st century *content* standards and objectives as well as 21st century standards and objectives for *learning skills* and *technology tools*. This broadened scope of science curriculum is built on the firm belief that quality engaging instruction must be built on a curriculum that triangulates rigorous 21st century content, 21st century learning skills and the use of 21st century technology tools.

Committees of educators from across the state convened to revise the content standards and objectives. The overarching goal was to build a rigorous, relevant and challenging science curriculum that would prepare students for the 21st century. West Virginia educators, including regular classroom teachers, special education teachers, and teachers representing higher education institutions played a key role in shaping the content standards to align with national standards, rigorous national assessments, and research and best practice in the field of science education. The contribution of these professionals was critical in creating a policy that is meaningful to classroom teachers and appears in a format that can easily be used and understood.

Policy 2520.35 is organized around the three major components of a standards-based curriculum: learning standards, instructional objectives and performance descriptors. The learning standards are the *broad descriptions* of what *all* students must know and be able to do at the conclusion of the instructional sequence. The accompanying grade-level objectives are specific descriptors of knowledge, skills and attitudes that when mastered will enable the student to attain the standard. The instructional objectives guide instructional *planning* and provide a basis for determining appropriate *assessments, instructional strategies and resources*. The performance descriptors provide the basis for *assessing* overall student competence of grade level standards. The performance descriptors define the five student performance levels ranging from novice to distinguished. With the ultimate goal of “learning for all,” these descriptors allow the teacher, students and parents to judge the *level* of student proficiency in each 21st century learning standard.

In combination, the use of learning standards, instructional objectives and performance descriptors become a comprehensive guide for delivering a rigorous and relevant science curriculum to all West Virginia students. These elements, when used to guide the instructional process and when delivered with the creativity and instructional expertise of West Virginia teachers, will become a powerful resource for preparing students to meet the challenges of the 21st century.

Explanation of Terms

Content Standards are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by course title and are organized around the content standards.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Line breaks within the narrative format indicate clusters of concepts and skills. West Virginia has designed five performance levels: distinguished, above mastery, mastery, partial mastery and novice. Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills students need to acquire. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Distinguished: A student at this level has demonstrated exemplary performance. The work shows a distinctive and sophisticated application of knowledge and skills in real world situations that go beyond course or grade level applications.

Above Mastery: A student at this level has demonstrated effective performance and exceeds the standard. The work shows a thorough and effective application of knowledge and skills in real world situations within the subject matter and grade level..

Mastery: A student at this level has demonstrated competency over challenging subject matter, including knowledge and skills that are appropriate to the subject matter and grade level. The work is accurate, complete and addresses real world applications. The work shows solid academic performance at the course or grade level.

Partial Mastery: A student at this level has demonstrated limited knowledge and skills toward meeting the standard. The work shows basic but inconsistent application of knowledge and skills characterized by errors and/or omissions. Performance needs further development.

Novice: A student at this level has demonstrated minimal fundamental knowledge and skills needed to meet the standard. Performance at this level is fragmented and/or incomplete and needs considerable development.

Numbering of Standards

The number for each content standard is composed of four parts, each part separated by a period:

- the content area code is SC for Science,
- the letter S, for Standard,
- the grade level and

the standard number.

Illustration: SC.S.C.1 refers to Chemistry science content standard #1.

Numbering of Objectives

The number of each objective is composed of five parts, each part separated by a period:

- the content area code (SC for Science),
- the letter O is for Objective,
- the course title,
- the number of the content standard addressed, and
- the objective number.

Illustration: SC.O.C.2.3 refers to a Chemistry objective that addresses standard #2 in science, and that is the third objective listed under that standard.

Numbering of Performance Descriptors

- The number for each group of three performance descriptors is composed of four parts, each part separated by a period:
- the content area (SC for Science),
- the letters PD are for Performance Descriptors,
- the course title, and
- the standard number.

Illustration: SC.PD.C.2 refers to science performance descriptors for Chemistry, content standard 2.

Unique Electronic Numbers (UENs)

Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520.35 is available on the Web, each standard, each objective, and each group of five performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520.35 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520.35 is approved by the State Board of Education.

The prefix for the UENs for each content area in Policy 2520.35 is noted at the top of each page containing standards, objectives and performance descriptors. As sections of 2520.35 are revised, UENs will be changed to reflect the new approval date.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for fifth grade science standard #2 will be “200602.SC.S.5.2”.

CP	Conceptual Physics
E	Earth Science
ENV	Environmental Science
F	Forensic Science
HA	Human Anatomy and Physiology
P	Physics
PII	Physics II
PS	Physical Science

SCIENCE – POLICY 2520.35

The high school science content standards identify what students should know, understand and be able to do in the natural sciences throughout the eighth grade. Because each content standard utilizes the knowledge and skills of other standards, they are designed to be used as an integrated whole. Although material can be added to the content standards, using only a subset of the standards will leave gaps in the students' scientific literacy.

A three-dimensional instructional strategy model must be utilized to address the science curriculum and assure students' depth of understanding and breadth of knowledge in Ninth Grade Science, and Tenth Grade Science. That model uses the nature, content and application of science concepts to develop scientific inquiry and reasoning skills in students.

Standard 1: Nature of Science

The study of science as a human endeavor provides for the acquisition of ideas leading toward the current knowledge base that represents science content. The nature of science encompasses the basic values and beliefs that make up the scientific world view, how scientists go about their work and the general culture of scientific enterprise. Studying historical and current discoveries of scientists and scientific milestones provides students with information about how discoveries have influenced current scientific thought and advancements. Students should understand that the continuous development of scientific knowledge shapes history. The study of the history and nature of science clarifies scientific inquiry and the role of science in the development of world cultures. Students will engage in active inquiry through investigations and hands-on activities a minimum of 50% of the instructional time. Developing scientific literacy requires a learning environment in which students actively participate in meaningful hands-on activities while developing current technology skills. These investigations explore the natural world, require critical thinking and develop process skills. Learning activities are sequenced to shape, modify and develop students' knowledge in order for them to become independent inquirers.

Standard 2: Content of Science

Science subject matter focuses on the scientific facts, concepts, principles, theories and models that are important for all students to know, understand and apply. Through the integration of the fields of science and the development of unifying themes, students will understand the interrelationships among biology, chemistry, physics and the earth sciences. Scientifically literate students will make connections in the formal education setting and will apply their knowledge and skills to daily life experiences. The objectives describe the specific subject matter/concepts that students are to master at each grade level.

Standard 3: Application of Science

Broad unifying themes complement the perspectives presented in the other content standards. These themes are fundamental to understanding and unifying the various science disciplines. Major unifying themes are systems, models and changes. Scientific design and application permits the extension of senses, the enhancement of the knowledge base, transportation of materials and information, synthesizing of new products and the modification of the world. Students must learn to use technology to analyze situations, gather relevant information, generate and evaluate creative ideas, pose tangible solutions and communicate their analyses, results and suggestions concisely. The need to adapt to the rapid changes that are

likely to occur in the future makes it imperative that students develop a broad spectrum of technology-related skills and an openness to change. Applying science and technological innovations to personal and social issues such as health, populations, resources and environment helps students to develop decision-making skills. As students expand their conceptual horizons, they should recognize that collective individual actions manifest as societal issues. Students must recognize that society cannot afford to deal only with symptoms; personal and societal actions must be focused on elimination of the causes of problems. Students should recognize that unless imposed by legislation social change involves negotiation among different interest groups. Students must be allowed to encounter and examine social change in a variety of current and historical contexts.

A two-dimensional instructional strategy model must be utilized to address the science curriculum and assure students' depth of understanding and breadth of knowledge in Ninth Grade Physical Science, Biology, Conceptual Biology, Biology II, Chemistry, Conceptual Chemistry, Chemistry II, Physics, Conceptual Physics, Physics II, Earth Science, Environmental Science, and Human Anatomy and Physiology. This model uses the content of science with the nature and application of science to develop scientific inquiry and reasoning skills in students.

Standard 1: Nature and Application of Science

The study of science as a human endeavor provides for the acquisition of ideas leading toward the current knowledge base that represents science content. The nature and application of science encompasses the basic values and beliefs that make up the scientific world view, how scientists go about their work and the general culture of scientific enterprise. Students should understand that the continuous development of scientific knowledge shapes history. Students will engage in active inquiry through investigations and hands-on activities a minimum of 50% of the instructional time using safe procedures and practices. Developing scientific literacy requires a learning environment in which students actively participate in meaningful hands-on activities while developing current technology skills. Scientific design and application permits the extension of senses, the enhancement of the knowledge base, transportation of materials and information, synthesizing of new products and the modification of the world. These investigations explore the natural world, require critical thinking and develop process skills. Learning activities are sequenced to shape, modify and develop students' knowledge in order for them to become independent inquirers. Students must learn to analyze situations, gather relevant information, generate and evaluate creative ideas, pose tangible solutions and communicate their analyses, results and suggestions concisely.

Standard 2: Content of Science

Science subject matter focuses on the scientific facts, concepts, principles, theories and models that are important for all students to know, understand and apply. Through the integration of the fields of science and the development of unifying themes, students will understand the interrelationships among biology, chemistry, physics and the earth sciences. Scientifically literate students will make connections in the formal education setting and will apply their knowledge and skills to daily life experiences. The objectives describe the specific subject matter/concepts that students are to master at each grade level.

The Role of Technology

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning and provide the ability to adapt to change. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

Organization of the Science Program of Study

The West Virginia Science Program of Study is drawn from the National Science Education Standards and the Project 2061 Benchmarks to promote a rigorous and challenging science curriculum. Through experiencing a spiraling, inquiry-based program of study, students in grades K-8 will develop foundational knowledge and skills in the physical sciences, the life sciences, and the earth and space sciences. To assure scientific literacy for all students, a coordinated, integrated approach is utilized in grades K-8. Students in the 9th, 10th, 11th and 12th grades participate in advanced in-depth laboratory-based elective courses designed to expand their conceptual understanding and enhance their research and laboratory skills.

Ninth Grade Physical Science Content Standards and Objectives

The Ninth Grade Physical Science objectives continue the development of foundational knowledge in chemistry, physics, earth science and astronomy. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy and the use of 21st Century Skills across these major fields of science. Students will explore occupational opportunities in chemistry, engineering, earth science, and technology and evaluate the required academic preparations. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50 percent of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated in all activities. Building on the knowledge and skills acquired in Eighth Grade Science, students in Ninth Grade Physical Science will expand and deepen their understanding of major concepts such as energy interactions, chemical changes and earth processes. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade Nine	Physical Science			
Standard: 1	Nature and Application of Science

Objectives	Students will			
SC.O.PS.2.1	apply dimensional analysis and scientific notation in making metric calculations.			
SC.O.PS.2.2	predict chemical and physical properties of an element using its position in the periodic table.			
SC.O.PS.2.3	collect data to infer the relationships among density, mass and volume and apply to earth models <ul style="list-style-type: none"> • plate tectonics 			

	<ul style="list-style-type: none"> • weather systems • ocean currents.
SC.O.PS.2.4	relate molecular motion and the amount of kinetic energy to the temperature of a system.
SC.O.PS.2.5	characterize compounds as ionic, nonpolar covalent or polar covalent and distinguish the difference between molecular and ionic structures.
SC.O.PS.2.6	write formulas and name compounds given oxidation numbers of monatomic and polyatomic ions.
SC.O.PS.2.7	<p>determine the coefficients and classify the reaction type of a chemical equation</p> <ul style="list-style-type: none"> • synthesis or combination • decomposition • single replacement • double replacement • combustion.
SC.O.PS.2.8	cite evidence for the occurrence of a chemical reaction from student generated experimental data (e.g., production of color, light, heat, sound, smell, gas, or precipitate).
SC.O.PS.2.9	<p>qualitatively and quantitatively describe the law of conservation of mass/energy</p> <ul style="list-style-type: none"> • mechanical • thermal • chemical • electrical • nuclear.
SC.O.PS.2.10	<p>compare the types of particles liberated in nuclear decay and interpret half-life graphs:</p> <ul style="list-style-type: none"> • radiometric dating • nuclear medicine • nuclear waste disposal.
SC.O.PS.2.11	<p>experimentally demonstrate the relationship between heat and temperature:</p> <ul style="list-style-type: none"> • specific heat • melting point • latent heat.
SC.O.PS.2.12	predict, experimentally determine and diagram magnetic fields of magnets.
SC.O.PS.2.13	construct and diagram DC circuits and solve for unknown variables using Ohm's Law and power equations.
SC.O.PS.2.14	qualitatively explain the relationship between electricity and magnetism.
SC.O.PS.2.15	conduct experiments to verify the inverse square relationship between gravity, distance and intensity of light and sound.

SC.O.PS.2.16	<p>experimentally obtain data and apply graphs, vectors and mathematical models to quantify Newton's Laws of motion:</p> <ul style="list-style-type: none"> • velocity • acceleration • force • momentum • time.
SC.O.PS.2.17	conduct an experiment to calculate the mechanical advantages, work in/out and efficiencies of simple machines.
SC.O.PS.2.18	design, conduct and analyze experiments to determine variables affecting the period of pendulums.
SC.O.PS.2.19	differentiate between transverse and longitudinal waves and model examples of each type and relate to water, light and sound waves.
SC.O.PS.2.20	examine seismographic and geologic evidence to determine structure, composition and age of the Earth.
SC.O.PS.2.21	predict and present a weather forecast using a weather map and meteorological data.
SC.O.PS.2.22	analyze latitude, altitude and surface features to predict climatic conditions.
SC.O.PS.2.23	<p>research and organize evidence to support the theory and effects of plate tectonics including:</p> <ul style="list-style-type: none"> • density • force • mountain building • fossil • magnetic evidence.
SC.O.PS.2.24	apply fusion, heat transfer, gravity, and electromagnetism to the sun's evolution and its impact on the solar system.
SC.O.PS.2.25	<p>investigate theories for the origin and configuration of the solar system:</p> <ul style="list-style-type: none"> • nebular theory • Earth-Moon formation • heliocentric • geocentric models.

Biology Content Standards and Objectives

Biology is a course designed for students who desire a broader, in-depth study of the content found in many biological fields of endeavor. This course is designed to build upon and extend the Biology concepts, skills, and knowledge from the science program, using skills for the 21st Century. Students will explore occupational opportunities in health, engineering, and technology and evaluate the required academic preparations while expanding laboratory skills and experiences. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

arguments regarding the potential use and abuse of specific genetic engineering technologies, and	as potential solutions to real world problems, and			
research various biomes, analyze the interrelationships of organisms and explain factors the affect coevolution.	determine how changing environmental factors disrupt the interrelationships of organisms and affect the carrying capacity of an ecosystem.	determine how changing environmental factors disrupt the interrelationships of organisms within an ecosystem and alter energy flow.	describe how abiotic variables determine an ecosystem and identify interrelationships between organisms.	list biotic and abiotic variables within an ecosystem and identify interrelationships between organisms.
Objectives	Students will			
SC.O.B.2.1	investigate and correlate the properties of chemical and biological molecules to their function in biochemical pathways.			
SC.O.B.2.2	relate the structure of cellular organelles to their functions and interactions in eukaryotic cells.			
SC.O.B.2.3	compare and contrast cell types <ul style="list-style-type: none"> • prokaryotic/eukaryotic • plant/animal • archaea/bacteria • various body cells. 			
SC.O.B.2.4	relate the structure and function of individual body systems to the overall functioning of the organism.			
SC.O.B.2.5	predict and assess responses of organisms to internal and environmental stimuli.			
SC.O.B.2.6	analyze the chemistry and fluid mosaic model of the cell membrane as they relate to import and export of molecules necessary for life including: <ul style="list-style-type: none"> • osmosis • diffusion • active transport • passive transport • dialysis. 			
SC.O.B.2.7	quantitatively analyze the flow of energy through cellular processes: <ul style="list-style-type: none"> • photosynthesis • cellular respiration 			

	<ul style="list-style-type: none"> • fermentation.
SC.O.B.2.8	differentiate mechanisms of homeostasis in living systems (negative and positive feedback).
SC.O.B.2.9	<p>examine the processes of binary fission, mitosis, meiosis and relate them to:</p> <ul style="list-style-type: none"> • the number of chromosomes • production of daughter cells, somatic cells, and gametes • variations or lack of variations within a species.
SC.O.B.2.10	<p>use Punnett squares to predict genotypic and phenotypic ratios by applying Mendel's Laws of Genetics:</p> <ul style="list-style-type: none"> • in monohybrid and dihybrid crosses • complete dominance • incomplete dominance • codominance • sex-linked traits • multiple alleles.
SC.O.B.2.11	analyze karyotypes and pedigrees as diagnostic tools.
SC.O.B.2.12	construct and use models of DNA to explain replication and mutations.
SC.O.B.2.13	differentiate the structure and function of messenger, transfer and ribosomal RNA in the process of transcription and translation.
SC.O.B.2.14	research and debate the application of DNA technology in the context of social, ethical, and political issues.
SC.O.B.2.15	<p>evaluate the evidence for natural selection including:</p> <ul style="list-style-type: none"> • speciation • fossil record evidence • molecular similarities • homologous structures.
SC.O.B.2.16	evaluate the influence of the historical social context on the development of evolutionary theory.
SC.O.B.2.17	compare morphological, cladistic and other classification systems including domains, kingdoms and other taxa.
SC.O.B.2.18	justify the placement of viruses in classification systems.
SC.O.B.2.19	<p>examine the cycle of viruses and compare disease prevention:</p> <ul style="list-style-type: none"> • vaccinations • vector control • drug therapy.
SC.O.B.2.20	evaluate environmental factors that affect succession, populations and communities.
SC.O.B.2.21	propose ecosystem models that incorporate interactions of biotic and abiotic environmental variables in biogeochemical

	cycles.
SC.O.B.2.22	interpret changes in energy as it flows through an ecosystem to illustrate conservation of energy in the energy pyramid, food web, and food chain.
SC.O.B.2.23	analyze interrelationships of organisms within an ecosystem <ul style="list-style-type: none"> • competition <ul style="list-style-type: none"> • predation • Symbiosis • Commensalism • Mutualism • parasitism.
SC.O.B.2.24	analyze graphs, GIS data and traditional maps reflecting changes in population to predict limiting factors in ecosystems as they determine carrying capacity.

Conceptual Biology Content Standards and Objectives

Conceptual Biology is an introductory course designed for students who are interested in the field of technical biology which will give them the scientific knowledge, opportunities to develop the inquiry, problem solving skills, and decision making abilities necessary for their future vocation. Conceptual Biology is an alternative to Biology and is designed to prepare students for entry-level careers, using skills for the 21st Century. Students will explore occupational opportunities in health, engineering, and technology and evaluate the required academic preparations while expanding their knowledge and laboratory experiences. The course will provide an in-depth study in the chemical nature of life, cellular functions, microbiology, ecology, biotechnology, zoology and botany with an emphasis on application. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

SC.O.CB.2.17	evaluate forest and wildlife best management practices as they affect succession, populations and communities.

SC.O.CB.2.18	assess the implications of invasive species on native wildlife and their habitat requirements.
SC.O.CB.2.19	interpret changes in energy as it flows through an ecosystem to illustrate conservation of energy in the energy pyramid, food web, and food chain.
SC.O.CB.2.20	characterize complex interactions of organisms with ecosystems based on their niches including interspecific and intraspecific competition and symbiosis.
SC.O.CB.2.21	analyze graphs, GIS data, and traditional maps reflecting changes in populations to predict limiting factors in ecosystems and determine carrying capacity.
SC.O.CB.2.22	predict the effects of human activities on biogeochemical cycles of matter and energy in the biosphere over time: <ul style="list-style-type: none">• water quality• air quality• recycling• climate change

Biology II Content Standards and Objectives

Biology II is an advanced course that is an elective designed for students who have completed Biology or Conceptual Biology and desire an in-depth and rigorous study of the content found in many biological fields of endeavor. This course is designed to build upon and extend the Biology and Conceptual Biology concepts, skills and knowledge from a science program, using skills for the 21st Century. Students interested in health and scientific related careers will evaluate the required academic preparations while building and expanding their laboratory skills and experiences. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

development of technology as it relates to analyzing chromosomal abnormalities and correcting genetic disorders;	technology as it relates to analyzing chromosomal abnormalities and correcting genetic disorders;	analyzing chromosomal abnormalities and correcting genetic disorders;	analyzing chromosomal abnormalities and correcting genetic disorders;	analyzing chromosomal abnormalities and correcting genetic disorders;
examine the evidence that some viruses cause cancer;	compare and contrast historical and current treatments for varying viral infections;	evaluate treatment of viral diseases based on lytic and lysogenic cycles;	describe the lytic and lysogenic cycles and the treatments of viral diseases;	trace the life cycle of viruses and list of the treatments of viral diseases;
interpret the interrelatedness of living organisms through their characteristics and investigate their structures;	interpret the interrelatedness of living organisms through their characteristics;	classify and analyze living organisms by their characteristics;	describe the differences in living organisms by their characteristics;	list the characteristics of organisms;
explain how the embryonic development of animals provide evidence of a shared ancestry, and	examine the common stages of embryonic development of animals, and	survey embryonic development of animals, and	outline the embryonic development of animals, and	list the embryonic development of animals, and
examine the roles of innate and learned animal behaviors in the evolution of a species.	examine the historical study of innate and learned animal behaviors.	examine types of innate and learned animal behaviors.	compare and contrast innate and learned animal behaviors.	identify type of innate behaviors and types of learned animal behaviors.
Objectives	Students will			
SC.O.BII.2.1	correlate functional groups to unique properties of organic molecules to biochemical pathways.			
SC.O.BII.2.2	describe the transfer of energy during condensation and hydrolysis reactions of organic molecules (e.g., ATP, enzyme substrate and active site).			
SC.O.BII.2.3	summarize the electrochemical gradients in various cells and their corresponding environments.			

SC.O.BII.2.4	analyze the properties of water and its importance in biological systems: <ul style="list-style-type: none"> • polarity • solubility • specific heat • pH • and buffers.
SC.O.BII.2.5	examine the flow of energy through specific molecules in: <ul style="list-style-type: none"> • light dependent and light independent photosynthesis reactions • glycolysis • Kreb's cycle • EPS • fermentation.
SC.O.BII.2.6	interpret important research leading to the current knowledge of molecular genetics: <ul style="list-style-type: none"> • Griffith • Avery • Hershey & Chase • Chargaff • Franklin & Wilkins • Waston & Crick.
SC.O.BII.2.7	explain the use of restriction enzymes, vectors, plasmids and probes in recombinant DNA.
SC.O.BII.2.8	conduct and interpret DNA investigations such as RFLP and PCR.
SC.O.BII.2.9	analyze the process of DNA replication including: <ul style="list-style-type: none"> • DNA polymerase • semi-conservative replication • base-pairing.
SC.O.BII.2.10	apply the processes of transcription and translation to gene expression.
SC.O.BII.2.11	demonstrate the role of DNA in determining phenotype and illustrate ways of controlling and regulating expression and function of genes.
SC.O.BII.2.12	distinguish between chromosomal and gene mutations and their potential effects.
SC.O.BII.2.13	analyze a karyotype to determine chromosomal abnormalities.

SC.O.BII.2.14	<p>predict phenotypic ratios of crosses:</p> <ul style="list-style-type: none"> • pleiotropy • epistasis • multiple alleles • polygenic inheritance.
SC.O.BII.2.15	evaluate treatment of viral diseases based on lytic and lysogenic cycles.
SC.O.BII.2.16	<p>analyze the criteria for classifications of protists:</p> <ul style="list-style-type: none"> • motility • cellular structures • reproduction • energy sources.
SC.O.BII.2.17	<p>survey the fungi kingdom:</p> <ul style="list-style-type: none"> • characteristics • reproduction • relationship to humans and the ecosystem.
SC.O.BII.2.18	compare and contrast members of the plant kingdom in terms of their reproductive systems.

Objectives	Students will			

SC.O.C.2.1	classify pure substances by their chemical and physical properties.
SC.O.C.2.2	research and evaluate contributions to the evolution of the atomic theory.
SC.O.C.2.3	describe atoms using the Quantum Model.
SC.O.C.2.4	produce electron configurations and orbital diagrams for any element on the periodic table and predict the chemical properties of the element from the electron configuration.
SC.O.C.2.5	illustrate Lewis' dot structures for representative (main group) elements.
SC.O.C.2.6	generate the correct formula and/or name for ionic and molecular compounds.
SC.O.C.2.7	analyze periodic trends in atomic size, ionic size, electronegativity, ionization energy and electron affinity.
SC.O.C.2.8	predict the type of bonding that occurs between atoms and characterize the properties of the ionic, covalent or metallic substances.
SC.O.C.2.9	identify oxidation numbers to determine electron movement.
SC.O.C.2.10	construct models to explain the structure and geometry of organic and inorganic molecules.
SC.O.C.2.11	given the reactants, anticipate the products and create balanced equations for the five general types of chemical reactions: <ul style="list-style-type: none"> • synthesis or combination, • decomposition, • single replacement, • double replacement and • combustion.
SC.O.C.2.12	determine experimentally the effects of temperature and concentration on solution properties: <ul style="list-style-type: none"> • solubility, • conductivity, • density and • colligative properties.
SC.O.C.2.13	classify reactions as exothermic and endothermic reactions by the direction of heat flow in a chemical reaction.
SC.O.C.2.14	explain the chemical and physical concepts involved in dynamic equilibrium
SC.O.C.2.15	generate mole conversions that demonstrate correct application of scientific notation and significant: <ul style="list-style-type: none"> • mass to number of particles, • number of particles to volume, • volume to mass.
SC.O.C.2.16	perform calculations using the combined gas laws.

SC.O.C.2.17	perform the following “mole” calculations showing answers rounded to the correct number of significant figures: <ul style="list-style-type: none">• molarity• percentage composition• empirical formulas• molecular formulas• formulas of hydrates• mole-mole and mass-mass stoichiometry• determination of limiting reactant• theoretical yield.
SC.O.C.2.18	compare and contrast the Arrhenius and Bronsted-Lowry definitions of acids and bases.
SC.O.C.2.19	compare methods of measuring pH: <ul style="list-style-type: none">• indicators• indicator papers• pH meters.
SC.O.C.2.20	predict the product of an acid-base reaction.
SC.O.C.2.21	investigate and explain water’s role as a solvent based upon principles of polarity of substances.

Conceptual Chemistry Content Standards and Objectives

Conceptual Chemistry is an introductory level course designed for students in the skilled pathway who desire an alternative to a traditional college preparatory course emphasizing real life applications of chemical principles. Mathematical based problem solving is de-emphasized. Conceptual Chemistry is the study of matter, its composition and its changes. Emphasis is placed on the important role chemistry plays in a student's personal life, career opportunities, environment and society while developing 21st century skills. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in biology, chemistry, engineering, and technology. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

SC.O.CC.2.19	classify reactions as exothermic and endothermic reactions by the direction of heat flow in a chemical reaction.
SC.O.CC.2.20	given the reactants, anticipate the products and create balanced equations for nuclear reactions.

Chemistry II Content Standards and Objectives

Chemistry II is an advanced level course that is an elective designed for students who have completed Chemistry and desire a broader, in-depth study of the content found in the science field of chemistry. Chemistry is the study of matter, its composition and its changes. This course is designed to prepare students to be critical and independent thinkers who are able to function effectively in a scientific and technological society, and to build upon and extend the chemistry concepts, skills and knowledge from the previous chemistry class. This course is designed not only to prepare a student for college chemistry but to make the college chemistry experience much easier as the student will have already studied much of the material reserved for college chemistry at the high school level. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in biology, chemistry, engineering, and technology. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Chemistry II students at the distinguished level will: utilize VSEPR theory to make predictions about valence bonds that can be used to compare and contrast binding forces; justify the ideal gas laws on the basis of the kinetic-molecular theory; predict theoretical yield, limiting reactant, excess reactant, percent yield, and experimental error from a designed experiment that includes the appropriate stoichiometric applications;	Chemistry II students at the above mastery level will: utilize VSEPR theory to explain valence bonding; and the types of binding forces; assess the ideal gas laws on the basis of the kinetic-molecular theory; explain from experimental data and appropriate stoichiometric applications the limiting reactant, excess reactant, and theoretical yield;	Chemistry II students at the mastery level will: investigate valence bonds and binding forces; interpret the ideal gas laws on the basis of the kinetic-molecular theory; perform stoichiometric calculations utilizing Avogadro's concepts, significant figures, and mathematical applications for molar mass, theoretical yield, and limiting reactant;	Chemistry II students at the partial mastery level will: match types of bonding forces including all that contain valence bonds; explain the ideal gas laws on the basis of the kinetic-molecular theory; perform stoichiometric calculations utilizing Avogadro's concepts, significant figures, and mathematical applications for molar mass, theoretical yield, and limiting reactant;	Chemistry II students at the novice level will: describe valence bonds and types of binding forces; state the ideal gas laws and describe their basis on kinetic molecular theory; calculate theoretical yield that is expressed in correct significant figures and determine the molar mass, theoretical yield, and limiting reactant;

<p>design an experiment to illustrate the effect of changing concentration on the colligative properties of solutions, change of state, and molar mass;</p>	<p>evaluate experiments that effect colligative properties and states of matter by changing concentration;</p>	<p>explain by concentration calculations the effect of changing concentration on the colligative properties of solutions and on changes of state;</p>	<p>calculate molar mass and concentration then describe the effect of changing concentration on colligative properties and change of state:</p>	<p>match molar mass and the effect of concentration changes on colligative properties and changes of state;</p>
<p>evaluate systems based on the physical and chemical dynamic equilibrium concepts that include equilibrium constants and system directional change according to Le Chatelier's principle;</p>	<p>illustrate physical and chemical dynamic equilibrium concepts by calculating equilibrium constants and applying Le Chatelier's principle to predict system change:</p>	<p>explain the physical and chemical dynamic equilibrium concepts through calculation of equilibrium constants and application of Le Chatelier's principle;</p>	<p>describe the physical and chemical dynamic equilibrium concepts that include the calculation of equilibrium constants and Le Chatelier's principle;</p>	<p>define physical and chemical dynamic equilibrium concepts, equilibrium constants and Le Chatelier's principle;</p>
<p>design an effective battery using the voltage calculated from the Nernst equation;</p>	<p>predict the voltage using the Nernst equation and use this to compare chemical cells;</p>	<p>identify oxidation numbers for the ions that are used to calculate the electron movement in a redox reaction and calculate the voltage using the Nernst equation;</p>	<p>use oxidation numbers for ions in a compound to calculate the electron movement in a redox reaction and calculate the voltage using the Nernst equation;</p>	<p>recognize the oxidation numbers for ions in a compound used to calculate the electron movement in a redox reaction and match the voltage using the Nernst equation;</p>
<p>design and conduct experiments to collect and graphically analyze data to investigate reaction rate and predict reactant order;</p>	<p>demonstrate reactant order, rate constants, reaction rate laws, rate calculations and predict the effect of temperature on rate changes;</p>	<p>determine reactant order, rate constants, and reaction rate laws using rate calculation and describe the effect of temperature on rate changes;</p>	<p>estimate reactant order using rate constants, reaction rate laws, rate calculations, and temperature's influence on rate changes;</p>	<p>match reactant order, rate constants, or reaction rate laws, calculate the rate of reaction and describe the effect of temperature on rate changes;</p>
<p>design and conduct experiments to</p>	<p>demonstrate experimentally and</p>	<p>determine the heat of formation, heat of</p>	<p>state the second law of thermodynamics and</p>	<p>identify Hess's Law and the dependence of free</p>

<p>experimentally and mathematically demonstrate the first and second law of thermodynamics including the reaction spontaneity;</p> <p>calculate and explain the relationships among weak acids, pH, pOH, pK, K_a, K_b, K_w, ionization constants, and percent ionization, K_{sp};</p> <p>prove the presence of specific cations and anions in an unknown mixture through experimental data;</p> <p>solve complex problems involving radioactive decay and write nuclear equations for decay, fission, and fusion;</p> <p>perform calculations involving the addition of a strong acid or base to a buffer; experimentally justify the hydrolysis of a salt and equivalence point of a titration curve, and</p>	<p>mathematically applications of Hess's Law, spontaneous reactions, and the second law of thermodynamics;</p> <p>explain weak electrolytes, ionization constants, and percent ionization;</p> <p>design a qualitative analysis for an unknown mixture;</p> <p>investigate the similarities and differences between radioactive processes, nuclear fission, and fusion;</p> <p>predict the pH of a salt from its formula then calculate the pH of the salt; write the reaction of hydrolyzed salt; interpret the effect of a buffer on an aqueous system, and</p>	<p>reaction, heat of vaporization and heat of fusion while using applications of Hess's Law and use the second law of thermodynamics;</p> <p>identify weak electrolytes, pH, pOH, pK, K_a, K_b, K_w, K_{sp} and calculate pH and pOH; measure pH with indicator papers and electronic meters;</p> <p>analyze a solution that contains known cations and a solution that contains known anions;</p> <p>express radioactive decay in an equation format and solve simple problems for the half-life of an isotope;</p> <p>identify the components of a buffer and the use of buffers, and</p>	<p>applications of Hess's Law that include calculations of the free energy of formation and the free energy of reaction;</p> <p>identify weak electrolytes, pH, pOH, pK, K_a, K_b, K_w, K_{sp} and calculate pH and pOH; measure pH with indicator papers and electronic meters;</p> <p>construct a data table for cation and anion analysis;</p> <p>categorize by using the properties of the different types of radiation emitted during radioactive decay;</p> <p>identify salts that undergo hydrolysis and match the reaction for the ion with water; interpret a titration curve to identify the equivalence point, and</p>	<p>energy on enthalpy and entropy changes:</p> <p>define weak electrolytes, pH, pOH, pK, K_a, K_b, K_w, K_{sp}; calculate pH and pOH and measure pH with indicator papers or electronic meters;</p> <p>identify the colors of specific cation and anion precipitates;</p> <p>identify a nuclear equation and generally describe radioactive decay;</p> <p>identify the equivalence point on a titration curve, and</p>
---	---	---	---	--

evaluate organic structures and compounds based on functional groups.	differentiate, classify and characterize simple organic functional groups and compounds.	recognize and classify simple organic functional groups.	identify simple organic functional groups and compounds.	match simple organic functional groups and compounds.
Objectives	Students will			
SC.O.CII.2.1	identify types of binding forces such as: <ul style="list-style-type: none"> • ionic • covalent • metallic • van der Waals forces (including London) and relate binding forces to state, structure, and properties of matter.			
SC.O.CII.2.2	investigate the valence bond including the concepts of: <ul style="list-style-type: none"> • hybridization of orbitals • resonance • formation of sigma and pi bonds and demonstrate an understanding of the VSEPR theory.			
SC.O.CII.2.3	apply the principles of chemical reactivity, products of chemical reactions, and relationships on periodic table to predict the ions in a descriptive chemistry experiment.			
SC.O.CII.2.4	interpret the ideal gas laws on the basis of the kinetic-molecular theory.			
SC.O.CII.2.5	relate Avogadro's hypothesis and its relation to the mole concept.			
SC.O.CII.2.6	define changes of state, including critical temperatures and triple points, based on the kinetic molecular theory.			
SC.O.CII.2.7	calculate concentration and explain the effect of changing concentration on the colligative properties of solutions.			
SC.O.CII.2.8	identify oxidation numbers for ions and for any element in a compound to calculate the electron movement in a redox reaction and calculate the voltage using the Nernst equation.			
SC.O.CII.2.9	explain physical and chemical dynamic concepts; calculate equilibrium constants K_p , K_c , K_{sp} , K_a , and apply Le Chatelier's principle.			
SC.O.CII.2.10	use experimental data and graphical analysis to determine reactant order, rate constants, and reaction rate laws, calculate the rate of reaction and explain the effect of temperature on rate changes.			
SC.O.CII.2.11	determine the heat of formation, heat of reaction, heat of vaporization and heat of fusion; apply Hess's Law.			
SC.O.CII.2.12	using the second law of thermodynamics, calculate the free energy of formation, free energy of reaction and the dependence of free energy on enthalpy and entropy changes.			
SC.O.CII.2.13	perform all calculations with attention given to significant figures, precision of measured values, and the use of logarithmic			

	and exponential relationships.
SC.O.CII.2.14	calculate molar masses from gas density, freezing-point, and boiling-point measurements.
SC.O.CII.2.15	experimentally determine the properties of acids: <ul style="list-style-type: none"> • identify weak electrolytes; • define pH, pOH, pK, K_a, K_b, K_w, ionization constant, percent ionization, K_{sp}; • calculate pH and pOH; • measure pH with indicator papers and electronic meters; • recognize salts that undergo hydrolysis • write a reaction for the ion with water • interpret a titration curve to identify the equivalence point and • calculate the range of a buffer.
SC.O.CII.2.16	perform stoichiometric calculations to produce values for theoretical yield and to decide the limiting reactant of a given chemical reaction.
SC.O.CII.2.17	recognize simple organic functional groups and classify simple organic compounds by name.
SC.O.CII.2.18	given the reactants, anticipate the products and create balanced equations for nuclear reactions.

Earth Science Content Standards and Objectives

Earth Science is an advanced level lab course that is an elective designed for students who desire a broader understanding of the fundamentals of earth science and includes geology, oceanography, meteorology and astronomy. This course is designed to build on knowledge, skills, and dispositions developed during the science progression, which included the traditional disciplines of biology, chemistry, and physics where appropriate. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in geology, astronomy, astronomy, and ecology. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

use models and mathematical calculations to explain how the principles of physics and chemistry are used to determine the movements and compositions of structures within the solar system and universe, and	use models to explain how the principles of physics and chemistry are used to determine the movements and composition of structures within the solar system and universe, and	use models to relate principles of physics and chemistry to the movements and composition of structures within the solar system and universe, and	use diagrams and models to explain the movements and composition of structures within the solar system and universe, and	use diagrams and models to identify structures within the solar system and universe, and
research and debate solutions to ecological, economical, and societal conflicts.	research propose solutions to ecological, economical, and societal conflicts.	research and evaluate factors ecological, economical, and societal conflicts.	research and describe factors related to ecological, economical, and societal conflicts.	list ecological, economical, and societal conflicts related to Earth Science.
Objectives	Students will			
SC.O.ES.2.1	identify and describe the structure, origin, and evolution of the lithosphere, hydrosphere, atmosphere and biosphere.			
SC.O.ES.2.2	analyze seismic, density, gravity, and magnetic data to explain the structure of the earth.			
SC.O.ES.2.3	characterize the eras, epochs and periods in relation to earth history and geologic development.			
SC.O.ES.2.4	analyze radiometric dating and rock and fossil evidence to determine the age of substances.			
SC.O.ES.2.5	use chemical and physical properties to distinguish between common minerals and explain their economic uses.			
SC.O.ES.2.6	use rock characteristics to predict paleoenvironments or geologic conditions which existed during the formation of a given rock sample.			
SC.O.ES.2.7	investigate and describe the properties of water, which contribute to its critical role in physical and chemical weathering.			
SC.O.ES.2.8	compare and contrast the effectiveness of agents and processes of degradation: <ul style="list-style-type: none"> • weathering by gravity • wind • water • ice 			
SC.O.ES.2.9	predict geologic activity associated with specific plate boundaries and interactions.			
SC.O.ES.2.10	analyze modern and historical seismic information to determine epicenter location and magnitude of earthquakes.			
SC.O.ES.2.11	evaluate current explanations for mechanisms, which drive the motion of plates (convection, slab-pull, plate push).			

SC.O.ES.2.12	<p>relate the effect of degradation and tectonic forces on the earth's surface features:</p> <ul style="list-style-type: none"> • weathering • physical features of the ocean floor • life with the oceans.
SC.O.ES.2.13	construct and/or interpret information on topographic maps.
SC.O.ES.2.14	<p>identify and describe chemical and physical properties of oceans:</p> <ul style="list-style-type: none"> • composition • currents • physical features of the ocean floor.
SC.O.ES.2.15	compare and contrast characteristics of the various oceans, including their lateral and vertical motions.
SC.O.ES.2.16	<p>analyze the evolution of the ocean floor.</p> <ul style="list-style-type: none"> • ocean crust • sedimentation • active and passive continental margins.
SC.O.ES.2.17	<p>examine the stratification of the oceans:</p> <ul style="list-style-type: none"> • temperature • salinity zones • biological zones.
SC.O.ES.2.18	<p>investigate to explain heat transfer in the atmosphere and its relationship to meteorological processes:</p> <ul style="list-style-type: none"> • pressure • winds • evaporation • condensation • precipitation.
SC.O.ES.2.19	predict the effects of ocean currents on climate.
SC.O.ES.2.20	<p>use meteorological evidence and weather maps to forecast weather::</p> <ul style="list-style-type: none"> • air masses • wind • barometric pressure • temperature data.

SC.O.ES.2.21	<p>examine global change over time:</p> <ul style="list-style-type: none"> • climatic trends • global warming • ozone depletion.
SC.O.ES.2.22	apply Newton's Law of Universal Gravitation to the motion of celestial objects to explain phenomenon observed in the sun-earth-moon system.
SC.O.ES.2.23	analyze several origin theories of the solar system and universe and use them to explain the celestial bodies and their movements.
SC.O.ES.2.24	<p>compare ancient and modern methods of studying and uses for astronomy</p> <ul style="list-style-type: none"> • calendar • navigation.
SC.O.ES.2.25	Use various wavelengths of the electromagnetic spectrum to investigate the observable universe.
SC.O.ES.2.26	compare the relationship between earth processes and natural disasters with their impact on humans.
SC.O.ES.2.27	evaluate the potential conflicts, which arise between societal reliance on natural resources and the need to act as responsible stewards to reclaim the earth, including disposal of hazardous and non-hazardous waste.
SC.O.ES.2.28	research alternative energy sources and evaluate the ecological, environmental and economic cost-benefit ratio.

Environmental Science Content Standards and Objectives

Environmental Science is an elective, advanced level lab course which builds on foundational knowledge of the chemical, physical, biological, geological processes and focuses on the natural world. Through an inquiry-based program of study, all students will demonstrate environmental literacy as they explore the economic, social, political, and ecological interdependence in urban and rural areas. Students will synthesize information and experiences across disciplines as they acquire knowledge, values, and skills needed to protect and improve the environment. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50 percent of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated in all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

SC.O.ENV.2.27	<p>evaluate solid waste management practices:</p> <ul style="list-style-type: none"> • recycling • incineration • sanitary landfills • hazardous waste disposal.

Forensic Science Content Standards and Objectives

Forensic Science is an advanced level course that is an elective designed to provide students with hands-on experience in various aspects of a criminal investigation. Utilizing 21st Century skills students will demonstrate proficiency in evidence collection; interpretation and analysis of collected data, maintenance of data integrity, formulation of a conclusion/summary, and succinct communication of findings. -Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in science, technology, engineering, and math. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools, and content standards and objectives.

High School	Forensic Science			
Standard: 1	Nature and Application of Science

SC.O.FS.2.15	identify and describe agents and processes of degradation of evidence: <ul style="list-style-type: none"> • weathering • scavengers.
SC.O.FS.2.16	solve multi-step problems involving velocity, acceleration, net force, and projectile motion during analysis of crime scene: <ul style="list-style-type: none"> • ballistics • vehicular collisions • blood spatter.
SC.O.FS.2.17	investigate and analyze forensic evidence utilizing optical and acoustical applications
SC.O.FS.2.18	utilize biometric techniques for forensic science investigations: <ul style="list-style-type: none"> • prints • recognition scans • anthropometry.
SC.O.FS.2.19	research and evaluate technological advances and careers related to the field of forensics.

Human Anatomy and Physiology Content Standards and Objectives

Human Anatomy and Physiology is an advanced course that is an elective designed for those students wanting a deeper understanding of the structure and function of the human body. The body will be viewed as a whole using anatomical terminology necessary to describe location. Focus will be at both micro and macro levels reviewing cellular functions, biochemical processes, tissue interactions, organ systems and the interaction of those systems as it relates to the human organism. Systems covered include integumentary, skeletal, muscular, respiratory, circulatory, digestive, excretory, reproductive immunological, nervous and endocrine. This course will develop 21st century skills and be appropriate for college bound students as well as those choosing a health services career cluster. Students will engage in active inquiries, investigation, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in health and medical fields. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Objectives	Students will
SC.O.HAP.2.1	<p>apply directional terminology to locate human body structures:</p> <ul style="list-style-type: none"> • proximal • dorsal • medial • visceral • superficial • deep.
SC.O.HAP.2.2	<p>describe the organizational levels, interdependency and the interaction of</p> <ul style="list-style-type: none"> • cells • tissues • organs • organ systems.
SC.O.HAP.2.3	<p>categorize, by structure and function, the various types of human tissue:</p> <ul style="list-style-type: none"> • muscle • epithelial • connective • nervous.
SC.O.HAP.2.4	<p>relate the structure of the integumentary system to its function as a/an:</p> <ul style="list-style-type: none"> • sensory organ • environmental barrier • temperature regulator.
SC.O.HAP.2.5	relate how bone tissue is important to the development of the human skeleton.
SC.O.HAP.2.6	<p>correlate the structure and function of the elements of the skeletal system:</p> <ul style="list-style-type: none"> • bone • articulations • insertions.
SC.O.HAP.2.7	model the mechanisms of muscular contraction on the cellular and molecular levels.
SC.O.HAP.2.8	integrate the skeletal, muscular and nervous systems to the functioning of the organism.
SC.O.HAP.2.9	<p>model the muscular system including:</p> <ul style="list-style-type: none"> • locations • origins

	<ul style="list-style-type: none"> • insertions • muscle groups • types of muscles.
SC.O.HAP.2.10	classify the various types of neurons emphasizing the relationship of structure and function.
SC.O.HAP.2.11	model the mechanism of a nerve impulse at the cellular and molecular levels.
SC.O.HAP.2.12	compare and contrast the parts and functions of the central and peripheral nervous system including the autonomic portions.
SC.O.HAP.2.13	apply the structure of the ear and eye to their function/dysfunction in relation to environmental perception.
SC.O.HAP.2.14	apply the action of specific enzymes to their roles in bodily functions.
SC.O.HAP.2.15	incorporate the role of endocrine glands and their hormones into the overall functions and dysfunctions of the body.
SC.O.HAP.2.16	analyze the role of components and processes of the digestive system in supplying essential nutrients.
SC.O.HAP.2.17	explain how structures of the respiratory system are essential to cellular respiration, gas exchange and communication.
SC.O.HAP.2.18	<p>illustrate the structures of the circulatory and lymphatic systems and the function of blood to the role of:</p> <ul style="list-style-type: none"> • transportation • cellular support • defense.
SC.O.HAP.2.19	compare the compatibility of blood types and assess the molecular basis for blood functions.
SC.O.HAP.2.20	integrate the functions of the excretory system to the maintenance of the other body systems.
SC.O.HAP.2.21	compare and contrast the structure and function of male and female reproductive systems.
SC.O.HAP.2.22	outline the events of reproduction for the formation of gametes through fertilizations and embryological development.
SC.O.HAP.2.23	assess the role of components of the immune system in defending the body.
SC.O.HAP.2.24	research disease causative factors, symptoms, prevention and treatment.

Physics Content Standards and Objectives

Physics is an advanced level course that is an elective designed for students desiring a broader, in-depth study of the content found in the science field of physics. As a college preparatory course, Advanced Physics is a laboratory driven, advanced study of nature's universal laws with emphasis on process skills, using 21st century skills. This course is designed to build upon and extend the Physics concepts, skills, and knowledge from the science program. The course emphasizes a mathematical approach to the areas of kinematics, dynamics, thermodynamics, light and optics, electricity and magnetism and modern physics. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in biology, engineering and technology. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

<p>Objectives</p>	<p>Students will</p>			

SC.O.P.2.1	construct and interpret graphs of: <ul style="list-style-type: none"> • position versus time • velocity versus time • acceleration versus time.
SC.O.P.2.2	appraise data, either textbook generated or laboratory collected, for motion in one and/or two dimensions, then select the correct mathematical method for communicating the value of unknown variables.
SC.O.P.2.3	develop solutions for multi-step problems involving: <ul style="list-style-type: none"> • velocity • acceleration • momentum • net force.
SC.O.P.2.4	interpret graphical, algebraic and/or trigonometric solutions to prove the values for vector components and resultants.
SC.O.P.2.5	justify Newton's Laws of Motion in terms of equilibrium and net force situations.
SC.O.P.2.6	evaluate the conservation of energy and momentum and deduce solutions for elastic and inelastic collisions.
SC.O.P.2.7	assess the magnitude of buoyant force on submerged and floating objects.
SC.O.P.2.8	compare the pressure exerted by a fluid to the depth of an object in the fluid.
SC.O.P.2.9	anticipate the effects of Bernoulli's principle on fluid motion.
SC.O.P.2.10	examine the reflective, refractive and diffractive properties of mechanical and transverse waves.
SC.O.P.2.11	perform calculations to determine wave properties: <ul style="list-style-type: none"> • wavelength • frequency • velocity • energy.
SC.O.P.2.12	compare and contrast the physical properties of mechanical and transverse waves.
SC.O.P.2.13	research applications of Doppler shift in determining an approaching or receding source in wave propagation.
SC.O.P.2.14	apply ray optics diagrams to lenses and mirrors; use the lens/mirror equation and the magnification equation to solve optics problems.
SC.O.P.2.15	justify the image results obtained by diagramming the ray optics of lenses and mirrors and/or by deducing the image information from the lens/mirror equation.
SC.O.P.2.16	construct and analyze electrical circuits and calculate Ohm's law problems for series and parallel circuits.
SC.O.P.2.17	distinguish between direct and alternating current and identify ways of generating each type.
SC.O.P.2.18	analyze the motion of a projectile.

Conceptual Physics Content Standards and Objectives

Conceptual Physics is an advanced level course that is an elective designed for students who desire a physics course that will prepare them for technical careers. This course is an alternative to the traditional mathematical approach to physics. This approach covers the physics principles in a traditional sequence with an emphasis on conceptual understanding. While mathematics is de-emphasized, laboratory work will require traditional physics measurements to be made. Emphasis will be on the concepts that underlie the natural laws of the universe. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in biology, engineering and technology. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

High School	Conceptual Physics			
Standard: 1	Nature and Application of Science

Objectives	Students will			
SC.O.CP.1.1	implement safe procedures and practices when manipulating equipment, materials, organisms, and models.			
SC.O.CP.1.2	formulate scientific explanations based on historical observations and experimental evidence, accounting for variability in experimental results.			
SC.O.CP.1.3	conduct and/or design investigations that incorporate the skills and attitudes and/or values of scientific inquiry (e.g., established research protocol, accurate record keeping, replication of results and peer review, objectivity, openness, skepticism, fairness, or creativity and logic).			
SC.O.CP.1.4	design, conduct, evaluate and revise experiments (e.g., compose a question to be investigated, design a controlled investigation that produces numeric data, evaluate the data in the context of scientific laws and principles, construct a conclusion based on findings, propose revisions to investigations based on manipulation of variables and/or analysis of error, or communicate and defend the results and conclusions).			
SC.O.CP.1.5	draw conclusions from a variety of data sources to analyze and interpret systems and models (e.g., use graphs and equations to measure and apply variables such as rate and scale, evaluate changes in trends and cycles, or predict the influence of external variances such as potential sources of error, or interpret maps).			
SC.O.CP.1.6	investigate, compare and design scientific and technological solutions to address personal and societal problems.			
SC.O.CP.1.7	given current science-technology-societal issues, construct and defend potential solutions.			
SC.O.CP.1.8	relate societal, cultural and economic issues to key scientific innovations.			
SC.O.CP.1.9	synthesize concepts across various science disciplines to better understand the natural world (e.g., form and function, systems, or change over time).

and contrast between the flow of electrons in AC and DC circuits.	distinguish between the flow of electrons in AC and DC circuits.	distinguish between AC and DC circuits, describing how AC is converted to DC.	and alternating current.	
Objectives	Students will			
SC.O.CP.2.1	solve right triangle vector problems both graphically and algebraically.			
SC.O.CP.2.2	compare and contrast distance, velocity and acceleration of moving objects to describe accelerated and non-accelerated motions of a particle from textbook or lab collected data.			
SC.O.CP.2.3	analyze the motion of a projectile.			
SC.O.CP.2.4	illustrate forces acting on objects with free body diagrams.			
SC.O.CP.2.5	interpret Newton's Laws in terms of natural phenomena.			
SC.O.CP.2.6	compare and contrast kinetic and potential energies and recognize situations where mechanical energy is conserved.			
SC.O.CP.2.7	deduce work, energy, power and efficiency in mechanical systems.			
SC.O.CP.2.8	analyze Archimedes' and Pascal's principles to solve problems involving equilibrium and stability of floating systems.			
SC.O.CP.2.9	recognize the effects of Bernoulli's principle on fluid motion.			
SC.O.CP.2.10	compare and contrast the common temperature scales, convert from one temperature scale to another and evaluate temperature in terms of kinetic energy.			
SC.O.CP.2.11	apply the mechanism of heat transfer and relate to environmental and energy conservation issues.			
SC.O.CP.2.12	relate the first law of thermodynamics to energy conservation.			
SC.O.CP.2.13	compare and contrast sound and light waves using the concepts of reflection, refraction, and interference.			
SC.O.CP.2.14	solve problems involving wave speed, frequency and wavelength; determine factors that affect the speed of sound; recognize that the speed of light is a constant.			
SC.O.CP.2.15	model the production of a standing wave and propose a practical application of such a wave.			
SC.O.CP.2.16	compare the Doppler shift effect for sound and light and point out examples of its occurrences and applications.			
SC.O.CP.2.17	diagram image location: <ul style="list-style-type: none"> • plane and spherical mirrors • concave and convex lenses. 			
SC.O.CP.2.18	illustrate the applications of colored lights and pigments.			
SC.O.CP.2.19	examine the concept of polarization.			
SC.O.CP.2.20	analyze simple direct current circuits using Ohm's Law.			
SC.O.CP.2.21	distinguish between direct current and alternating current circuits and describe how AC is converted to DC.			

Physics II Content Standards and Objectives

Physics II advanced level course that is an elective designed for students who have completed Physics and desire a broader, in-depth study of physics content beyond those studied in Physics. As a college preparatory course, Physics II is a laboratory driven, advanced study of nature’s universal laws with emphasis on process skills, using 21st century skills. This course is designed to build upon and extend the Physics concepts, skills, and knowledge from the science program. The course emphasizes a mathematical approach to the area of mechanics, thermodynamics, light and optics, electricity and magnetism and modern physics. Students will engage in active inquires, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills as they evaluate the academic requirements and prepare for occupational opportunities in engineering and technology. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Kills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

categorize nuclei based on their placement on the periodic table and proton to neutron ratio to demonstrate different types of decay processes.	using the proton to neutron ratio, predict the type of nuclear decay that could occur for nuclei.	differentiate between stable and nuclear nuclei, and if the nucleus is unstable predict the type(s) of nuclear decay.	differentiate between stable and unstable nuclei and list types of decay that the unstable nuclei could display.	define stable and unstable nuclei and list types of decay that the unstable nuclei could display.
Objectives	Students will			
SC.O.PII.2.1	apply graphical analysis to interpret motion in terms of: <ul style="list-style-type: none"> • position • velocity • acceleration • time. 			
SC.O.PII.2.2	use data to deduce mathematical relationships involving one and two dimensional motion.			
SC.O.PII.2.3	experimentally verify laws of motion including: <ul style="list-style-type: none"> • Newton's Laws • Conservation of Momentum (linear and angular) • Conservation of Energy. 			
SC.O.PII.2.4	using knowledge of linear motion equations, synthesize concepts of rotational motion: <ul style="list-style-type: none"> • angular speed and acceleration • centripetal acceleration • Newtonian gravitation • Kepler's Laws 			

	<ul style="list-style-type: none"> • torque.
SC.O.PII.2.5	predict and verify the effect of variables on the properties and dynamics of fluids.
SC.O.PII.2.6	<p>interpret and apply concepts of thermal physics:</p> <ul style="list-style-type: none"> • distinction of heat and temperature • thermal expansion • properties of Ideal Gases • Kinetic Theory • specific heat • energy transfer.
SC.O.PII.2.7	<p>deduce the relative values of electric force and field strength based on the magnitude of and the distance from the point charge:</p> <ul style="list-style-type: none"> • Coulomb's Law • inverse square law.
SC.O.PII.2.8	construct, diagram and evaluate complex electrical circuits.
SC.O.PII.2.9	predict and interpret magnetic forces and magnetic fields, and apply their effect on the motion of a point charge and to the electric current in a wire or coil.
SC.O.PII.2.10	critique electromagnetic induction and evaluate its application to electric circuits and various devices.
SC.O.PII.2.11	investigate, analyze, and evaluate the concepts of solid-state physics and the application of semiconductors and superconductors in the advancement of electronics through the development of diodes, transistors, and integrated circuits.
SC.O.PII.2.12	<p>apply knowledge of simple harmonic motion - to calculate the kinetic and potential energies of the oscillating system:</p> <ul style="list-style-type: none"> • springs • pendulums • other oscillating objects.
SC.O.PII.2.13	<p>examine wave properties and their interactions:</p> <ul style="list-style-type: none"> • reflection • refraction • dispersion • total internal deflection • interference • diffraction • Doppler Shift • beats • polarization.

SC.O.PII.2.14	evaluate the application of wave properties to the development of optical and acoustical devices.
SC.O.PII.2.15	critique the role of technology in the development of historical models of the atom: <ul style="list-style-type: none">• radioactivity• atomic spectra• particle accelerators, etc.
SC.O.PII.2.16	examine evidence for the historical development of the quantum mechanical theory: <ul style="list-style-type: none">• Planck's blackbody radiation• Einstein's photoelectric effect• deBroglie's duality.
SC.O.PII.2.17	calculate an atom's binding energy as related to Einstein's special theory of relativity, and interpret the nuclear forces present.
SC.O.PII.2.18	differentiate between stable and unstable nuclei, and if the nucleus is unstable predict the type(s) of nuclear decay.
