The rule incorporates by reference the ambient air quality standards in West Virginia for sulfur oxides, particulate matter, carbon monoxide, ozone, nitrogen dioxide and lead, equivalent to the national primary and secondary ambient air quality standards (NAAQS) established under §109 of the Clean Air Act, and promulgated by the United States Environmental Protection Agency under 40 C.F.R. Part 50. National primary ambient air quality standards define levels of air quality which the Administrator of the EPA judges are necessary, with an adequate margin of safety, to protect the public health. National secondary ambient air quality standards define levels of air quality which the Administrator of the EPA judges necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

The rule also incorporates by reference the ambient air monitoring reference methods and equivalent methods promulgated by the EPA under 40 C.F.R. Part 53. These reference methods are used to demonstrate attainment (or non-attainment) of the NAAQS.

The standards and methods under 40 C.F.R. Parts 50 and 53 are subject to revision, and additional primary and secondary standards may be promulgated as the Administrator of the EPA deems necessary

to protect the public health and welfare.

In accordance with §109 of the Clean Air Act (CAA), the EPA has promulgated air quality criteria and NAAQS for sulfur oxides, particulate matter, carbon monoxide, ozone, nitrogen dioxide and lead. 45 C.S.R. 8 will meet the requirements for State Implementation Plans under §110 of the CAA through the NAAQS for sulfur oxides, particulate matter, carbon monoxide, ozone, nitrogen dioxide and lead incorporated by reference in this rule.

Based on its review of the air quality criteria and the national ambient air quality standards for ozone (O3) and photochemical oxidants, the EPA revised the standard for ozone to provide requisite protection of public health and welfare, and made corresponding revisions to the data handling conventions for ozone and changes in the Air Quality Index (AQI).

With regard to primary and secondary standards for ozone (O3), the EPA revised both standards by lowering the level from 0.075 ppm to 0.070 ppm and retained their indicators, forms, and average times so as to provide increased protection against health effects associated with long and short-term exposures such as premature mortality, increased hospital admissions and emergency department visits, and
