OFFICE WEST VIRGINIA
SECRETARY OF STATE

NOTICE OF A COMMENT PERIOD ON A PROPOSED RULE

AGENCY: West Virginia Board of Education TITLE NUMBER: 126

RULE TYPE: Legislative ; CITE AUTHORITY: W. Va. Constitution, Article XII, §2; W.Va. Code §18-2-5 and §18-9A-22

AMENDMENT TO AN EXISTING RULE: YES X NO ____

IF YES, SERIES NUMBER OF RULE BEING AMENDED: 44 M

TITLE OF RULE BEING AMENDED: Content Standards and Objectives for West Virginia Schools (2520)

IF NO, SERIES NUMBER OF NEW RULE BEING PROPOSED: ____

TITLE OF RULE BEING PROPOSED: ____

IN LIEU OF A PUBLIC HEARING, A COMMENT PERIOD HAS BEEN ESTABLISHED DURING WHICH ANY INTERESTED PERSON MAY SEND COMMENTS CONCERNING THESE PROPOSED RULES. THIS COMMENT PERIOD WILL END ON June 21, 2002 AT 4:45 p.m. . ONLY WRITTEN COMMENTS WILL BE ACCEPTED AND ARE TO BE MAILED TO THE FOLLOWING ADDRESS:

Norma K. Miller Director

Office of Program Services

West Virginia Department of Education

1900 Kanawha Boulevard East, Bldg. 6, Room 243

Charleston, West Virginia 25305-0330

THE ISSUES TO BE HEARD WILL BE LIMITED TO THE PROPOSED CONTENT STANDARDS AND OBJECTIVES FOR TECHNICAL AND ADULT EDUCATION COURSES

William J. Luff, Jr.
Deputy State Superintendent of Schools

ATTACH A **BRIEF** SUMMARY OF YOUR PROPOSAL

SCANNED

EXECUTIVE SUMMARY

POLICY 2520
CONTENT STANDARDS AND OBJECTIVES FOR WEST VIRGINIA SCHOOLS

Background:
Policy 2520 defines the content standards (or instructional goals) and objectives for the programs of study required by Policy 2510 and establishes a standardized format for such. The original effective date of the policy was July, 1997. In October, 2001, a revision of the Policy incorporating the Content Standards and Objectives for Mathematics, Reading/English Language Arts, Science, Social Studies and Technology was presented to the West Virginia Board of Education. It was placed on public comment and was approved by the Board on December 13, 2001, to be effective July 1, 2003.

Purpose:
The purpose of this Board item is to seek approval for Policy 2520 as it has been revised to include content standards and objectives for the additional courses listed below.

Summary of Revisions:
The revision adds to the Content Standards and Objectives the courses for Technical and Adult Education in the areas of Agricultural Education, Business Education, Diversified Cooperative Training, Family & Consumer Sciences, Health Occupations, Lodging Management, Marketing Education, Occupational Family & Consumer Science, Technical and Industrial Education, Technology Education and Travel West Virginia.

NOTE: Because of the length of the new section for Technical and Adult Education courses, the additions have not been underlined. All pages from page 1000 to the end of the Content Standards and Objectives are added pages.

No changes were made to the Content Standards and Objectives for Mathematics, Reading/English Language Arts, Science, Social Studies and Technology.

Slight changes using the standard strikethroughs and underlines were made to the Table of Contents and the Explanation of Terms to reflect the addition of the new Content Standards and Objectives.

OFFICE WEST VIRGINIA SECRETARY OF STATE

TITLE 126
LEGISLATIVE RULE
BOARD OF EDUCATION

SERIES 44
CONTENT STANDARDS AND OBJECTIVES FOR WEST VIRGINIA SCHOOLS (2520)

§126-44-1. General.

1.1. Scope. – West Virginia Board of Education Policy 2510 provides a definition of a delivery system for, and an assessment and accountability system for, a thorough and efficient education for West Virginia public school students. Policy 2520 defines the content standards (or instructional goals) and objectives for the programs of study required by W.Va. 126CSR42 (Policy 2510).

1.2. Authority. – W.Va. Constitution, Article XII, §2, W.Va. Code §18-2-5 and §18-9A-22.

1.3. Filing Date. -- ~~December 18, 2001.~~

1.4. Effective Date. -- July 1, 2003.

1.5. Repeal of former rule. -- This legislative rule amends W.Va. 126CSR44 (Policy 2520).

§126-44-2. Purpose.

2.1. This policy defines the content standards (or instructional goals) and objectives for the programs of study required by Policy 2510 in reading and English language arts, mathematics, science, social studies, health, dance, music, theatre, visual art, geography, foreign languages, driver education, physical education, ~~and~~ the Robert C. Beach Vocational Agriculture Credit, and technical and adult courses.

§126-44-3. Incorporation by Reference.

3.1. A copy of Content Standards and Objectives for West Virginia Schools is attached and incorporated by reference into this policy. Copies may be obtained in the Office of the Secretary of State and in the West Virginia Department of Education, Office of Instructional Services and Office of Program Services.

§126-44-4. Summary of the Content Standards (or Instructional Goals) and Objectives.

4.1. The West Virginia Board of Education has the responsibility for establishing high quality standards pertaining to all educational standards pertaining to all education programs (W.Va. Code §18-9A-22). The content standards and objectives provide a focus for teachers to teach and students to learn those skills and competencies essential for future success in the workplace and further education. The document includes: content standards for reading and English language arts, mathematics, social studies, science, health, dance, music, theatre, visual art, geography, foreign languages, driver education, physical education, ~~and~~ the Robert C. Beach Vocational Agriculture Credit and technical and adult courses. Also included are program charts for K-2, 3-4, 5-8, and 9-12; instructional practices for K-12; an explanation of terms; objectives that reflect a rigorous and challenging curriculum, process/workplace objectives and computer/technology objectives.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.6.1.1 know the defining characteristics, build background knowledge and use reading skills to understand a variety of West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.6.1.2 increase amount of independent reading.
RLA.6.1.3 determine theme and locate supporting details in a literary passage and across the curriculum.
RLA.6.1.4 analyze text to determine transitional words/language.
RLA.6.1.5 use comprehension skills (e.g., draw conclusions; interpret meaning).
RLA.6.1.6 determine the elements of literature (e.g. external conflict; mood) to construct meaning and recognize author's and/or reader's purpose.
RLA.6.1.7 identify figurative language in text (e.g., simile; metaphor; personification).
RLA.6.1.8 explain text connections to self, to other text and to the world for understanding a literary passage.
RLA.6.1.9 identify and classify types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quantrain).
RLA.6.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.6.1.11 use connotation and denotation to understand meaning.
RLA.6.1.12 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.6.1.13 spell commonly misspelled words, easily confused words and words with irregular endings across the curriculum.

Performance Descriptors (RLA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students identify and classify literary types, draw and justify conclusions and opinions, explain inferences and interpret author's purpose.
- **Mastery**
  Sixth grade students performing at the mastery level read independently grade level literary types, draw and justify conclusions and summarize grade level passage.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read grade level materials to recognize literary types, draw conclusions and develop a simple summary.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.6.2.1	use pre-writing and drafting strategies (e.g., drawing; clustering; brainstorming; discussion) to generate topics and plan approaches to writing tasks.
RLA.6.2.2	from a prompt, use the writing process to develop a composition that contains specific, relevant details and transitions.
RLA.6.2.3	use writing strategies to address specific writing purposes (e.g., creative; journalistic; essay; narrative; informative; persuasive) and address various audiences (e.g., peers; teachers; employers).
RLA.6.2.4	edit own writing as well as the writing of others to correct errors in organization, content, usage, mechanics and spelling.
RLA.6.2.5	demonstrate mastery of a 3-5 paragraph composition.
RLA.6.2.6	apply capitalization rules (e.g., proper adjectives; names of written works; family relationships; nationalities; religions/religious terms).
RLA.6.2.7	apply punctuation rules (e.g., commas; apostrophes in contractions and possessives both singular and plural; colons; semicolons; quotation marks; hyphens).
RLA.6.2.8	write and punctuate simple and compound sentences with conjunctions, interjections and prepositions.
RLA.6.2.9	identify and use correct pronoun case.
RLA.6.2.10	identify action, helping and linking verbs while correctly using verb tense and subject/verb agreement in simple and compound sentences.
RLA.6.2.11	use adjectives and adverbs in comparative and superlative forms.
RLA.6.2.12	compose sentences that contain compound subjects and compound verbs.
RLA.6.2.13	organize information by combining predicates, modifiers, phrases and/or clauses and sentences.
RLA.6.2.14	identify and correct run-on sentences, sentence fragments and redundant words/sentences.
RLA.6.2.15	use the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.6.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; atlas; almanac, encyclopedia; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms; audiovisual resources).
RLA.6.2.17	begin to demonstrate the ability to identify the source, location, media type, relevancy and content validity of available resource information.
RLA.6.2.18	identify title, author, subject, call number, publisher and copyright of resources using the card catalog, either hard copy or computer database.
RLA.6.2.19	use traditional organizers to create, read, interpret and organize information in the form of tables, graphs, diagrams and charts.
RLA.6.2.20	organize information into an outline by being able to categorize information into topic, subtopic and detail.
RLA.6.2.21	identify and use correct note taking skills.

Performance Descriptors (RLA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at the distinguished level write an effective and elaborate multiple paragraph composition correct in form and language. Students independently construct and organize research notes from print and non-print sources.
- **Mastery**
  Sixth grade students performing at the mastery level write a three to five paragraph composition employing grade level grammatical/mechanical conventions. Students apply note-taking skills to organize research data into an outline or graphic representation.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level write a basic composition with a beginning, middle and end demonstrating grade level command of grammatical and mechanical conventions. Students use fundamental note-taking skills to organize information into a basic format.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.6.3.1 recognize and exhibit oral communication skills (e.g. volume; rate; audience etiquette).
RLA.6.3.2 retell simple and detailed stories sequentially.
RLA.6.3.3 listen in order to comprehend topic and purpose (e.g. of a guest speaker; informational video; televised interview; radio news program).
RLA.6.3.4 reach consensus in group discussions or settings.

Performance Descriptors (RLA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes, commanding audience attention. Students' fluent oral reading exhibits accurate pitch, tone, rate and volume.
- **Mastery**
  Sixth grade students performing at the mastery level communicate with a peer audience for different purposes. Students demonstrate receptive audience behavior and identify components of presentations. Students read orally exhibiting elements of pitch, tone, rate and volume.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level communicate in small group situations. Students demonstrate receptive audience behavior. Students read orally in small groups.

Seventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts seventh grade students will continue to build, expand and refine prior learning. Instruction in rigorous listening, speaking and viewing skills will assist in preparing students to interact and express themselves among peers, at home and in the community. Reading comprehension and vocabulary will develop through the use of a wide variety of literary genres and strategies. Writing will utilize error-free and content-rich communication in gathering, organizing, interpreting and reporting information gained through reading. The student will be exposed to these objectives not only in the language arts but across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.7.1.1 classify the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.7.1.2 increase amount of independent reading.

RLA.7.1.3 relate common themes across a variety of literature.

RLA.7.1.4 use comprehension strategies (e.g., generalize; evaluate; infer; paraphrase).

RLA.7.1.5 determine the elements of literature (e.g., internal conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.7.1.6 identify figurative language in text (e.g., jargon; idioms).

RLA.7.1.7 make text connections to self, to other text and to the real world.

RLA.7.1.8 identify literary techniques used to interpret literature (e.g., flashback; stereotype; foreshadowing; propaganda).

RLA.7.1.9 read types of poetry and the use of inversion, rhyme and rhythm in narrative poems, ballads and lyrics.

RLA.7.1.10 recognize and understand clipped or shortened words and their meaning. (e.g., bio for biography; auto for automobile).

RLA.7.1.11 compare/contrast connotation and denotation to understand and enhance meaning of words, sentences and passages.

RLA.7.1.12 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.

RLA.7.1.13 use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level read both functional and recreational materials above grade level. Students classify literary types, support inferences and paraphrase selections making connections to other texts and global situations.
- **Mastery**
  Seventh grade students performing at the mastery level read independently grade level materials to classify literary types, explain inferences and paraphrase long selections.
- **Partial Mastery**
  Seventh grade students performing a the partial mastery level read grade level materials to recognize literary types. Students use simple summarizing and paraphrasing in a simple passage.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.7.2.1 from a prompt, use the writing process to develop a focused composition that contains specific, relevant details and transition.

RLA.7.2.2 use editing and revision techniques to vary sentence length, change sentence order, use vivid and concise words and eliminate organizational errors.

RLA.7.2.3 use the writing process to compose various types of writing (e.g., creative; informative; expository; persuasive; articles; essays; journals; letters; poetry; research/reports).

RLA.7.2.4 apply capitalization rules (e.g., languages; school subjects; regions of the U.S.; dialogue; lines of poetry).
RLA.7.2.5 apply punctuation rules (e.g., commas; apostrophes in possessives and contractions; colons; semicolons; hyphens; dashes; parentheses).
RLA.7.2.6 use pronouns, pronoun cases and antecedents in correct form.
RLA.7.2.7 use and apply correct forms of adjectives and adverbs and/or complex sentence.
RLA.7.2.8 recognize and avoid use of double negatives.
RLA.7.2.9 compose and punctuate simple, compound and complex sentences with and without conjunctions.
RLA.7.2.10 organize information by combining subjects, predicates, modifiers and appositives in a sentence.
RLA.7.2.11 use correct verb tense and subject verb agreement (e.g., irregular verbs; compound subjects; indefinite pronouns; intervening phrases).
RLA.7.2.12 edit to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.7.2.13 use title page, copyright page, table of contents, appendix, bibliography, glossary and index to locate specified information.
RLA.7.2.14 identify and use traditional reference sources for different types of information (e.g., *Reader's Guide; Books In Print;* newspapers; schedules; advertisements; audiovisual resources).
RLA.7.2.15 recognize copyright laws/issues, ethical acquisition and use of digital information in citing sources for research/report.
RLA.7.2.16 identify the source, location, media type, relevancy and content validity of available information.
RLA.7.2.17 demonstrate the ability to use the card catalog in hard copy or database to identify title, author, subject, call number, publisher and copyright resources.
RLA.7.2.18 develop an outline using prepared notes to write a paragraph.

Performance Descriptors (RLA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at the distinguished level write an elaborate composition from a prompt that is well-crafted, cohesively organized and employs sophisticated transitional elements. Students construct a detailed outline to produce a research-based report.
- **Mastery**
  Seventh grade students performing at the mastery level write a focused composition from a prompt with grade level grammatical/mechanical conventions; sentence variety, supporting details and clear transition. Students develop an outline from research notes to produce a paragraph.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level write a composition form a prompt with limited grammatical/mechanical conventions; complete sentences, basic details and evidence of transition. Students produce a simple outline from notes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.7.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; audience etiquette).
RLA.7.3.2 perform dramatizations.
RLA.7.3.3 use oral/visual information to foster exploration, questioning and imagining of a topic.
RLA.7.3.4 listen in order to comprehend topic, purpose and perspective in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.7.3.5 play a variety of roles in group discussions including active listener and discussion leader.
RLA.7.3.6 distinguish between private and public information in research and reporting.

Performance Descriptors (RLA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes. Students deliver an expressive oral presentation exhibiting effective communication skills. Students respond critically to oral and visual information to oral and visual information by exploring and questioning the topic.
- **Mastery**
  Seventh grade students performing at the mastery level communicate with an audience for different purposes. Students deliver an oral presentation exhibiting communication skills by using a prepared script. Students respond to oral and visual information by exploring and questioning the topic.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level communicate with a small group for a specific purpose. Students deliver an oral presentation by reading from a prepared script. Students respond to oral and visual information by summarizing the topic.

Eighth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eighth grade students will develop strategies that support understanding language in real life situations. Writing will focus on audience, stressing mechanics, language expression and organization of ideas. Reading comprehension and vocabulary will stress development of reading and thinking skills that enable students to comprehend and react critically to various genres of regional, national and international works. The student will utilize language arts skills across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.8.1.1 analyze the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.8.1.2 relate literary theme to global situations.

RLA.8.1.3 use comprehension strategies (e.g., make judgments; hypothesize; critique; analyze).

RLA.8.1.4 determine the elements of literature (e.g., internal/external conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.8.1.5 identify figurative language in text (e.g., onomatopoeia; pun).

RLA.8.1.6 make text connections to self, to other text and to the real world.

RLA.8.1.7 identify literary technique used to interpret literature (e.g., irony; satire; persuasive language; analogies).

RLA.8.1.8 read and identify types of poetry and the use of inversion, rhyme and rhythm (e.g., narrative poem; ballad; lyric; epic).
RLA.8.1.9 recognize and understand acronyms.
RLA.8.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.8.1.11 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students extend multiple text information by making and supporting judgments, hypothesizing, critiquing and analyzing abstract themes.
- **Mastery**
  Eighth grade students performing at the mastery level read independently and analyze grade level literary genres, make and support judgments and hypothesize to connect reader's response with author's purpose.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level read grade level materials to classify literary types, explain inferences and make judgments, demonstrate literal knowledge of text and relate text to personal experience.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.8.2.1 use the writing process to demonstrate the ability to compose a variety of written work (e.g., creative; informative; expository; persuasive; chronological explanatory; compare/contrast; cause/effect; article; essay; journal; letters; reports; poetry).
RLA.8.2.2 from a prompt, develop a focused composition that contains specific, relevant details, smooth transition and vivid, precise words.
RLA.8.2.3 use revision and editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.8.2.4 recognize and write a simple thesis statement.
RLA.8.2.5 apply all capitalization rules in writing.
RLA.8.2.6 apply punctuation rules in writing (e.g., appositives; phrases; clauses).
RLA.8.2.7 compose and punctuate grammatically correct simple, compound and complex sentences.
RLA.8.2.8 identify and correct faulty parallel sentence structure such as phrases and clauses.
RLA.8.2.9 edit and revise to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.8.2.10 conduct research using parts of a book to gather, evaluate and synthesize data from a variety of sources (e.g., print; non-print; people).
RLA.8.2.11 identify and use traditional reference sources for different types of information.
RLA.8.2.12 independently resolve information conflicts and validate information through assessing, researching and comparing data.
RLA.8.2.13 demonstrate the ability to identify the source, location, media type, relevancy and content validity of available information.
RLA.8.2.14 apply use of card catalog and/or computer databases to identify title, author, subject, call number, publisher and copyright resources to gather information for a presentation.
RLA.8.2.15 use an outline to develop a written and/or oral presentation using graphic representation.

Performance Descriptors (RLA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at the distinguished level write an elaborate composition with a concise thesis statement demonstrating command of grammatical/mechanical conventions, vivid word terminology and sophisticated transitional elements to enhance meaning. Students integrate relevant, valid information in a research-based presentation.
- **Mastery**
  Eighth grade students performing at the mastery level write a composition including a thesis statement designed for a specific audience. Students apply grade level grammatical/mechanical conventions, correct word terminology and smooth transition. Students identify information that is relevant and valid for a research-based presentation.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level write a composition with evidence of grammatical/mechanical conventions, correct word terminology, transition and use of relevant information in a simple research-based presentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.8.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; speaking etiquette; audience etiquette).

RLA.8.3.2 present an oral report with graphic aids (e.g., tables; graphs; diagrams; charts).

RLA.8.3.3 think critically about oral/visual information presented; relate personal experiences and apply the information to global situations.

RLA.8.3.4 listen in order to analyze and critique information received in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).

RLA.8.3.5 play a variety of roles in group discussions including active listener, discussion leader and/or facilitator.

RLA.8.3.6 properly use private and public information.

Performance Descriptors (RLA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at the distinguished level plan, design and deliver an enhanced oral/visual presentation justifying their opinions on global situations. Students evaluate sources and the use of public/private information, and apply communication skills required for various careers.
- **Mastery**
  Eighth grade students performing at the mastery level plan, design and deliver an effective oral presentation. Students relate personal experiences to oral/visual information, distinguish between public and private information and identify communication skills required for various careers.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level deliver oral presentations, communicate personal experiences, locate information and investigate communication skills required for various careers.

Ninth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts ninth grade students will focus on the effective use of written language in educational and occupational endeavors and interpersonal communications. Instructional delivery will be enhanced through a wide range of media. Frequent interaction with a broad array of quality literature will encourage an appreciation for the power of the written and spoken word. All language arts skills and strategies will be utilized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.9.1.1 identify historical, cultural and biographical influences of literary works.
RLA.9.1.2 recognize literary styles according to genre.
RLA.9.1.3 increase the amount of independent reading with emphasis on fiction and nonfiction.
RLA.9.1.4 develop various reading skills for literary experience, information and/or performing a task (e.g., skimming; scanning; note taking; SQ3R).
RLA.9.1.5 locate specific information in text (e.g., main and supporting ideas; specific facts; statistics; definition).
RLA.9.1.6 expand the use of various strategies to establish word meanings (e.g., context clues; affixes; multiple meanings).
RLA.9.1.7 recognize and explain the function of illustration within a specific text (e.g., pictures; artwork; graphic organizers such as maps - charts - lists - graphs).
RLA.9.1.8 recognize literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.9.1.9 identify literary elements within specific genre (e.g., point of view; theme; conflict; characterization; voice).
RLA.9.1.10 recognize the elements, structures and tone of various genres (e.g., novels; short stories; poetry; drama).

Performance Descriptors (RLA.PD.9.1)

- **Distinguished**
  Ninth grade students performing at the distinguished level read, analyze and evaluate advanced level texts to draw supportable conclusions about historical, cultural and biographical influences on literary works. Students analyze and evaluate literary devices and elements, author's voice and modes of characterization.
- **Mastery**
  Ninth grade students performing at the mastery level read, analyze and synthesize grade level texts to explain historical, cultural and biographical influences on literary works. Students explain literary devices and elements, author's voice and modes of characterization.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level read grade level texts to identify historical, cultural, and biographical influences on literary works. Students recognize basic literary devices and elements.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.9.2.1	address specific purposes (e.g., narrative; expository; descriptive; persuasive) by employing writing strategies.
RLA.9.2.2	generate topics and plan approaches to writing by using pre-writing strategies.
RLA.9.2.3	employ drafting strategies for specific writing tasks.
RLA.9.2.4	create a well-developed composition from a prompt.
RLA.9.2.5	develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement.
RLA.9.2.6	develop a composition that is focused and coherent and has a clear, logical progression of ideas (e.g., spatial order in a descriptive essay; chronological order in a process essay).
RLA.9.2.7	use different transitional devices (e.g., introductory and transitional phrases/conjunctions) between paragraphs.
RLA.9.2.8	develop a composition that uses complete and varied sentences.
RLA.9.2.9	develop a composition with appropriate and precise word choice.
RLA.9.2.10	use revision and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.9.2.11	access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog, electronic media).
RLA.9.2.12	extend note-taking skills to process and organize information.
RLA.9.2.13	recognize the concept of intellectual property and plagiarism (e.g., media copyright laws; public/private domain).
RLA.9.2.14	develop outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.9.2.15	practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.9.2.16	recognize choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.9.2.17	recognize the parts of speech within a sentence.
RLA.9.2.18	recognize the various parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive).
RLA.9.2.19	identify editing strategies to correct errors in capitalization and punctuation.
RLA.9.2.20	recognize and correct errors in subject/verb agreement.
RLA.9.2.21	recognize and correct errors in pronoun case usage and pronoun/antecedent agreement.
RLA.9.2.22	recognize and correct run-on sentences, fragments, misplaced modifiers and awkward constructions.
RLA.9.2.23	form supportable predictions, opinions, inferences and conclusions based upon text.
RLA.9.2.24	expand vocabulary through various literary works.
RLA.9.2.25	identify word etymologies to determine meaning.

Performance Descriptors (RLA.PD.9.2)

- **Distinguished**
  Ninth grade students performing at the distinguished level write compositions that contain a refined thesis statement, subtle transition, elevated diction and pertinent sentence structure germane to the writing. Students independently apply the rules of intellectual property.
- **Mastery**
  Ninth grade students performing at the mastery level write diverse compositions that integrate a clear and logical thesis statement, transitional devices, precise diction, varied sentence structure and a clear, logical progression of supported ideas. Students extend research skills by applying the rules of intellectual property to compositions.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.6.1.1 know the defining characteristics, build background knowledge and use reading skills to understand a variety of West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.6.1.2 increase amount of independent reading.
RLA.6.1.3 determine theme and locate supporting details in a literary passage and across the curriculum.
RLA.6.1.4 analyze text to determine transitional words/language.
RLA.6.1.5 use comprehension skills (e.g., draw conclusions; interpret meaning).
RLA.6.1.6 determine the elements of literature (e.g. external conflict; mood) to construct meaning and recognize author's and/or reader's purpose.
RLA.6.1.7 identify figurative language in text (e.g., simile; metaphor; personification).
RLA.6.1.8 explain text connections to self, to other text and to the world for understanding a literary passage.
RLA.6.1.9 identify and classify types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quantrain).
RLA.6.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.6.1.11 use connotation and denotation to understand meaning.
RLA.6.1.12 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.6.1.13 spell commonly misspelled words, easily confused words and words with irregular endings across the curriculum.

Performance Descriptors (RLA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students identify and classify literary types, draw and justify conclusions and opinions, explain inferences and interpret author's purpose.
- **Mastery**
  Sixth grade students performing at the mastery level read independently grade level literary types, draw and justify conclusions and summarize grade level passage.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read grade level materials to recognize literary types, draw conclusions and develop a simple summary.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.6.2.1	use pre-writing and drafting strategies (e.g., drawing; clustering; brainstorming; discussion) to generate topics and plan approaches to writing tasks.
RLA.6.2.2	from a prompt, use the writing process to develop a composition that contains specific, relevant details and transitions.
RLA.6.2.3	use writing strategies to address specific writing purposes (e.g., creative; journalistic; essay; narrative; informative; persuasive) and address various audiences (e.g., peers; teachers; employers).
RLA.6.2.4	edit own writing as well as the writing of others to correct errors in organization, content, usage, mechanics and spelling.
RLA.6.2.5	demonstrate mastery of a 3-5 paragraph composition.
RLA.6.2.6	apply capitalization rules (e.g., proper adjectives; names of written works; family relationships; nationalities; religions/religious terms).
RLA.6.2.7	apply punctuation rules (e.g., commas; apostrophes in contractions and possessives both singular and plural; colons; semicolons; quotation marks; hyphens).
RLA.6.2.8	write and punctuate simple and compound sentences with conjunctions, interjections and prepositions.
RLA.6.2.9	identify and use correct pronoun case.
RLA.6.2.10	identify action, helping and linking verbs while correctly using verb tense and subject/verb agreement in simple and compound sentences.
RLA.6.2.11	use adjectives and adverbs in comparative and superlative forms.
RLA.6.2.12	compose sentences that contain compound subjects and compound verbs.
RLA.6.2.13	organize information by combining predicates, modifiers, phrases and/or clauses and sentences.
RLA.6.2.14	identify and correct run-on sentences, sentence fragments and redundant words/sentences.
RLA.6.2.15	use the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.6.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; atlas; almanac, encyclopedia; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms; audiovisual resources).
RLA.6.2.17	begin to demonstrate the ability to identify the source, location, media type, relevancy and content validity of available resource information.
RLA.6.2.18	identify title, author, subject, call number, publisher and copyright of resources using the card catalog, either hard copy or computer database.
RLA.6.2.19	use traditional organizers to create, read, interpret and organize information in the form of tables, graphs, diagrams and charts.
RLA.6.2.20	organize information into an outline by being able to categorize information into topic, subtopic and detail.
RLA.6.2.21	identify and use correct note taking skills.

Performance Descriptors (RLA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at the distinguished level write an effective and elaborate multiple paragraph composition correct in form and language. Students independently construct and organize research notes from print and non-print sources.
- **Mastery**
  Sixth grade students performing at the mastery level write a three to five paragraph composition employing grade level grammatical/mechanical conventions. Students apply note-taking skills to organize research data into an outline or graphic representation.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level write a basic composition with a beginning, middle and end demonstrating grade level command of grammatical and mechanical conventions. Students use fundamental note-taking skills to organize information into a basic format.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.6.3.1 recognize and exhibit oral communication skills (e.g. volume; rate; audience etiquette).
RLA.6.3.2 retell simple and detailed stories sequentially.
RLA.6.3.3 listen in order to comprehend topic and purpose (e.g. of a guest speaker; informational video; televised interview; radio news program).
RLA.6.3.4 reach consensus in group discussions or settings.

Performance Descriptors (RLA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes, commanding audience attention. Students' fluent oral reading exhibits accurate pitch, tone, rate and volume.
- **Mastery**
  Sixth grade students performing at the mastery level communicate with a peer audience for different purposes. Students demonstrate receptive audience behavior and identify components of presentations. Students read orally exhibiting elements of pitch, tone, rate and volume.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level communicate in small group situations. Students demonstrate receptive audience behavior. Students read orally in small groups.

Seventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts seventh grade students will continue to build, expand and refine prior learning. Instruction in rigorous listening, speaking and viewing skills will assist in preparing students to interact and express themselves among peers, at home and in the community. Reading comprehension and vocabulary will develop through the use of a wide variety of literary genres and strategies. Writing will utilize error-free and content-rich communication in gathering, organizing, interpreting and reporting information gained through reading. The student will be exposed to these objectives not only in the language arts but across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.7.1.1 classify the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.7.1.2 increase amount of independent reading.

RLA.7.1.3 relate common themes across a variety of literature.

RLA.7.1.4 use comprehension strategies (e.g., generalize; evaluate; infer; paraphrase).

RLA.7.1.5 determine the elements of literature (e.g., internal conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.7.1.6 identify figurative language in text (e.g., jargon; idioms).

RLA.7.1.7 make text connections to self, to other text and to the real world.

RLA.7.1.8 identify literary techniques used to interpret literature (e.g., flashback; stereotype; foreshadowing; propaganda).

RLA.7.1.9 read types of poetry and the use of inversion, rhyme and rhythm in narrative poems, ballads and lyrics.

RLA.7.1.10 recognize and understand clipped or shortened words and their meaning. (e.g., bio for biography; auto for automobile).

RLA.7.1.11 compare/contrast connotation and denotation to understand and enhance meaning of words, sentences and passages.

RLA.7.1.12 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.

RLA.7.1.13 use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level read both functional and recreational materials above grade level. Students classify literary types, support inferences and paraphrase selections making connections to other texts and global situations.
- **Mastery**
  Seventh grade students performing at the mastery level read independently grade level materials to classify literary types, explain inferences and paraphrase long selections.
- **Partial Mastery**
  Seventh grade students performing a the partial mastery level read grade level materials to recognize literary types. Students use simple summarizing and paraphrasing in a simple passage.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.7.2.1 from a prompt, use the writing process to develop a focused composition that contains specific, relevant details and transition.

RLA.7.2.2 use editing and revision techniques to vary sentence length, change sentence order, use vivid and concise words and eliminate organizational errors.

RLA.7.2.3 use the writing process to compose various types of writing (e.g., creative; informative; expository; persuasive; articles; essays; journals; letters; poetry; research/reports).

RLA.7.2.4 apply capitalization rules (e.g., languages; school subjects; regions of the U.S.; dialogue; lines of poetry).
RLA.7.2.5 apply punctuation rules (e.g., commas; apostrophes in possessives and contractions; colons; semicolons; hyphens; dashes; parentheses).
RLA.7.2.6 use pronouns, pronoun cases and antecedents in correct form.
RLA.7.2.7 use and apply correct forms of adjectives and adverbs and/or complex sentence.
RLA.7.2.8 recognize and avoid use of double negatives.
RLA.7.2.9 compose and punctuate simple, compound and complex sentences with and without conjunctions.
RLA.7.2.10 organize information by combining subjects, predicates, modifiers and appositives in a sentence.
RLA.7.2.11 use correct verb tense and subject verb agreement (e.g., irregular verbs; compound subjects; indefinite pronouns; intervening phrases).
RLA.7.2.12 edit to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.7.2.13 use title page, copyright page, table of contents, appendix, bibliography, glossary and index to locate specified information.
RLA.7.2.14 identify and use traditional reference sources for different types of information (e.g., *Reader's Guide; Books In Print;* newspapers; schedules; advertisements; audiovisual resources).
RLA.7.2.15 recognize copyright laws/issues, ethical acquisition and use of digital information in citing sources for research/report.
RLA.7.2.16 identify the source, location, media type, relevancy and content validity of available information.
RLA.7.2.17 demonstrate the ability to use the card catalog in hard copy or database to identify title, author, subject, call number, publisher and copyright resources.
RLA.7.2.18 develop an outline using prepared notes to write a paragraph.

Performance Descriptors (RLA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at the distinguished level write an elaborate composition from a prompt that is well-crafted, cohesively organized and employs sophisticated transitional elements. Students construct a detailed outline to produce a research-based report.
- **Mastery**
  Seventh grade students performing at the mastery level write a focused composition from a prompt with grade level grammatical/mechanical conventions; sentence variety, supporting details and clear transition. Students develop an outline from research notes to produce a paragraph.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level write a composition form a prompt with limited grammatical/mechanical conventions; complete sentences, basic details and evidence of transition. Students produce a simple outline from notes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.7.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; audience etiquette).
RLA.7.3.2 perform dramatizations.
RLA.7.3.3 use oral/visual information to foster exploration, questioning and imagining of a topic.
RLA.7.3.4 listen in order to comprehend topic, purpose and perspective in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.7.3.5 play a variety of roles in group discussions including active listener and discussion leader.
RLA.7.3.6 distinguish between private and public information in research and reporting.

Performance Descriptors (RLA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes. Students deliver an expressive oral presentation exhibiting effective communication skills. Students respond critically to oral and visual information to oral and visual information by exploring and questioning the topic.
- **Mastery**
  Seventh grade students performing at the mastery level communicate with an audience for different purposes. Students deliver an oral presentation exhibiting communication skills by using a prepared script. Students respond to oral and visual information by exploring and questioning the topic.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level communicate with a small group for a specific purpose. Students deliver an oral presentation by reading from a prepared script. Students respond to oral and visual information by summarizing the topic.

Eighth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eighth grade students will develop strategies that support understanding language in real life situations. Writing will focus on audience, stressing mechanics, language expression and organization of ideas. Reading comprehension and vocabulary will stress development of reading and thinking skills that enable students to comprehend and react critically to various genres of regional, national and international works. The student will utilize language arts skills across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.8.1.1 analyze the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.8.1.2 relate literary theme to global situations.

RLA.8.1.3 use comprehension strategies (e.g., make judgments; hypothesize; critique; analyze).

RLA.8.1.4 determine the elements of literature (e.g., internal/external conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.8.1.5 identify figurative language in text (e.g., onomatopoeia; pun).

RLA.8.1.6 make text connections to self, to other text and to the real world.

RLA.8.1.7 identify literary technique used to interpret literature (e.g., irony; satire; persuasive language; analogies).

RLA.8.1.8 read and identify types of poetry and the use of inversion, rhyme and rhythm (e.g., narrative poem; ballad; lyric; epic).
RLA.8.1.9 recognize and understand acronyms.
RLA.8.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.8.1.11 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students extend multiple text information by making and supporting judgments, hypothesizing, critiquing and analyzing abstract themes.
- **Mastery**
  Eighth grade students performing at the mastery level read independently and analyze grade level literary genres, make and support judgments and hypothesize to connect reader's response with author's purpose.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level read grade level materials to classify literary types, explain inferences and make judgments, demonstrate literal knowledge of text and relate text to personal experience.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.8.2.1 use the writing process to demonstrate the ability to compose a variety of written work (e.g., creative; informative; expository; persuasive; chronological explanatory; compare/contrast; cause/effect; article; essay; journal; letters; reports; poetry).
RLA.8.2.2 from a prompt, develop a focused composition that contains specific, relevant details, smooth transition and vivid, precise words.
RLA.8.2.3 use revision and editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.8.2.4 recognize and write a simple thesis statement.
RLA.8.2.5 apply all capitalization rules in writing.
RLA.8.2.6 apply punctuation rules in writing (e.g., appositives; phrases; clauses).
RLA.8.2.7 compose and punctuate grammatically correct simple, compound and complex sentences.
RLA.8.2.8 identify and correct faulty parallel sentence structure such as phrases and clauses.
RLA.8.2.9 edit and revise to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.8.2.10 conduct research using parts of a book to gather, evaluate and synthesize data from a variety of sources (e.g., print; non-print; people).
RLA.8.2.11 identify and use traditional reference sources for different types of information.
RLA.8.2.12 independently resolve information conflicts and validate information through assessing, researching and comparing data.
RLA.8.2.13 demonstrate the ability to identify the source, location, media type, relevancy and content validity of available information.
RLA.8.2.14 apply use of card catalog and/or computer databases to identify title, author, subject, call number, publisher and copyright resources to gather information for a presentation.
RLA.8.2.15 use an outline to develop a written and/or oral presentation using graphic representation.

Performance Descriptors (RLA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at the distinguished level write an elaborate composition with a concise thesis statement demonstrating command of grammatical/mechanical conventions, vivid word terminology and sophisticated transitional elements to enhance meaning. Students integrate relevant, valid information in a research-based presentation.
- **Mastery**
  Eighth grade students performing at the mastery level write a composition including a thesis statement designed for a specific audience. Students apply grade level grammatical/mechanical conventions, correct word terminology and smooth transition. Students identify information that is relevant and valid for a research-based presentation.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level write a composition with evidence of grammatical/mechanical conventions, correct word terminology, transition and use of relevant information in a simple research-based presentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.8.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; speaking etiquette; audience etiquette).

RLA.8.3.2 present an oral report with graphic aids (e.g., tables; graphs; diagrams; charts).

RLA.8.3.3 think critically about oral/visual information presented; relate personal experiences and apply the information to global situations.

RLA.8.3.4 listen in order to analyze and critique information received in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).

RLA.8.3.5 play a variety of roles in group discussions including active listener, discussion leader and/or facilitator.

RLA.8.3.6 properly use private and public information.

Performance Descriptors (RLA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at the distinguished level plan, design and deliver an enhanced oral/visual presentation justifying their opinions on global situations. Students evaluate sources and the use of public/private information, and apply communication skills required for various careers.
- **Mastery**
  Eighth grade students performing at the mastery level plan, design and deliver an effective oral presentation. Students relate personal experiences to oral/visual information, distinguish between public and private information and identify communication skills required for various careers.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level deliver oral presentations, communicate personal experiences, locate information and investigate communication skills required for various careers.

Ninth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts ninth grade students will focus on the effective use of written language in educational and occupational endeavors and interpersonal communications. Instructional delivery will be enhanced through a wide range of media. Frequent interaction with a broad array of quality literature will encourage an appreciation for the power of the written and spoken word. All language arts skills and strategies will be utilized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.9.1.1 identify historical, cultural and biographical influences of literary works.
RLA.9.1.2 recognize literary styles according to genre.
RLA.9.1.3 increase the amount of independent reading with emphasis on fiction and nonfiction.
RLA.9.1.4 develop various reading skills for literary experience, information and/or performing a task (e.g., skimming; scanning; note taking; SQ3R).
RLA.9.1.5 locate specific information in text (e.g., main and supporting ideas; specific facts; statistics; definition).
RLA.9.1.6 expand the use of various strategies to establish word meanings (e.g., context clues; affixes; multiple meanings).
RLA.9.1.7 recognize and explain the function of illustration within a specific text (e.g., pictures; artwork; graphic organizers such as maps - charts - lists - graphs).
RLA.9.1.8 recognize literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.9.1.9 identify literary elements within specific genre (e.g., point of view; theme; conflict; characterization; voice).
RLA.9.1.10 recognize the elements, structures and tone of various genres (e.g., novels; short stories; poetry; drama).

Performance Descriptors (RLA.PD.9.1)

- **Distinguished**
  Ninth grade students performing at the distinguished level read, analyze and evaluate advanced level texts to draw supportable conclusions about historical, cultural and biographical influences on literary works. Students analyze and evaluate literary devices and elements, author's voice and modes of characterization.
- **Mastery**
  Ninth grade students performing at the mastery level read, analyze and synthesize grade level texts to explain historical, cultural and biographical influences on literary works. Students explain literary devices and elements, author's voice and modes of characterization.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level read grade level texts to identify historical, cultural, and biographical influences on literary works. Students recognize basic literary devices and elements.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.9.2.1	address specific purposes (e.g., narrative; expository; descriptive; persuasive) by employing writing strategies.
RLA.9.2.2	generate topics and plan approaches to writing by using pre-writing strategies.
RLA.9.2.3	employ drafting strategies for specific writing tasks.
RLA.9.2.4	create a well-developed composition from a prompt.
RLA.9.2.5	develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement.
RLA.9.2.6	develop a composition that is focused and coherent and has a clear, logical progression of ideas (e.g., spatial order in a descriptive essay; chronological order in a process essay).
RLA.9.2.7	use different transitional devices (e.g., introductory and transitional phrases/conjunctions) between paragraphs.
RLA.9.2.8	develop a composition that uses complete and varied sentences.
RLA.9.2.9	develop a composition with appropriate and precise word choice.
RLA.9.2.10	use revision and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.9.2.11	access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog, electronic media).
RLA.9.2.12	extend note-taking skills to process and organize information.
RLA.9.2.13	recognize the concept of intellectual property and plagiarism (e.g., media copyright laws; public/private domain).
RLA.9.2.14	develop outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.9.2.15	practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.9.2.16	recognize choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.9.2.17	recognize the parts of speech within a sentence.
RLA.9.2.18	recognize the various parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive).
RLA.9.2.19	identify editing strategies to correct errors in capitalization and punctuation.
RLA.9.2.20	recognize and correct errors in subject/verb agreement.
RLA.9.2.21	recognize and correct errors in pronoun case usage and pronoun/antecedent agreement.
RLA.9.2.22	recognize and correct run-on sentences, fragments, misplaced modifiers and awkward constructions.
RLA.9.2.23	form supportable predictions, opinions, inferences and conclusions based upon text.
RLA.9.2.24	expand vocabulary through various literary works.
RLA.9.2.25	identify word etymologies to determine meaning.

Performance Descriptors (RLA.PD.9.2)

- **Distinguished**
  Ninth grade students performing at the distinguished level write compositions that contain a refined thesis statement, subtle transition, elevated diction and pertinent sentence structure germane to the writing. Students independently apply the rules of intellectual property.
- **Mastery**
  Ninth grade students performing at the mastery level write diverse compositions that integrate a clear and logical thesis statement, transitional devices, precise diction, varied sentence structure and a clear, logical progression of supported ideas. Students extend research skills by applying the rules of intellectual property to compositions.

- **Partial Mastery**
  Ninth grade students performing at the partial mastery level write compositions that show evidence of a thesis statement, basic transition, limited diction, complete sentences and a progression of ideas. Students identify and explain the rules of intellectual property.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.9.3.1 understand, communicate and follow complex directions effectively.
RLA.9.3.2 review appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in the appropriate tone and at the appropriate time).
RLA.9.3.3 review listening behaviors prior to a school wide audience activity (e.g., staying alert; resisting distractions; identifying and adapting to the speaker's purpose).
RLA.9.3.4 listen to identify the purpose, make predictions, distinguish fact from opinion and construct meaning from discussion, speech or media.
RLA.9.3.5 recognize and correct usage errors in oral language.

Performance Descriptors (RLA.PD.9.3)

- **Distinguished**
  Ninth grade students performing at the distinguished level effectively design and communicate intricate directions. Students synthesize meaning from discussion, speech and media to communicate supportable opinions.
- **Mastery**
  Ninth grade students performing at the mastery level effectively communicate complex directions. Students construct meaning from discussion, speech and media through observation and participation.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level effectively communicate simple directions. Students determine meaning from discussion, speech and media through observation and/or participation.

Tenth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts tenth grade students will use written language for educational, occupational and personal endeavors. Preparation will include critiquing oral presentations and using listening, speaking and viewing while reading and writing. Instructional delivery will be enhanced by a wide variety of media. Frequent interaction with a broadened array of literature will encourage an increased appreciation and understanding for the power of the spoken and written word across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.6.1.1 know the defining characteristics, build background knowledge and use reading skills to understand a variety of West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.6.1.2 increase amount of independent reading.
RLA.6.1.3 determine theme and locate supporting details in a literary passage and across the curriculum.
RLA.6.1.4 analyze text to determine transitional words/language.
RLA.6.1.5 use comprehension skills (e.g., draw conclusions; interpret meaning).
RLA.6.1.6 determine the elements of literature (e.g. external conflict; mood) to construct meaning and recognize author's and/or reader's purpose.
RLA.6.1.7 identify figurative language in text (e.g., simile; metaphor; personification).
RLA.6.1.8 explain text connections to self, to other text and to the world for understanding a literary passage.
RLA.6.1.9 identify and classify types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quantrain).
RLA.6.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.6.1.11 use connotation and denotation to understand meaning.
RLA.6.1.12 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.6.1.13 spell commonly misspelled words, easily confused words and words with irregular endings across the curriculum.

Performance Descriptors (RLA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students identify and classify literary types, draw and justify conclusions and opinions, explain inferences and interpret author's purpose.
- **Mastery**
  Sixth grade students performing at the mastery level read independently grade level literary types, draw and justify conclusions and summarize grade level passage.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read grade level materials to recognize literary types, draw conclusions and develop a simple summary.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.6.2.1	use pre-writing and drafting strategies (e.g., drawing; clustering; brainstorming; discussion) to generate topics and plan approaches to writing tasks.
RLA.6.2.2	from a prompt, use the writing process to develop a composition that contains specific, relevant details and transitions.
RLA.6.2.3	use writing strategies to address specific writing purposes (e.g., creative; journalistic; essay; narrative; informative; persuasive) and address various audiences (e.g., peers; teachers; employers).
RLA.6.2.4	edit own writing as well as the writing of others to correct errors in organization, content, usage, mechanics and spelling.
RLA.6.2.5	demonstrate mastery of a 3-5 paragraph composition.
RLA.6.2.6	apply capitalization rules (e.g., proper adjectives; names of written works; family relationships; nationalities; religions/religious terms).
RLA.6.2.7	apply punctuation rules (e.g., commas; apostrophes in contractions and possessives both singular and plural; colons; semicolons; quotation marks; hyphens).
RLA.6.2.8	write and punctuate simple and compound sentences with conjunctions, interjections and prepositions.
RLA.6.2.9	identify and use correct pronoun case.
RLA.6.2.10	identify action, helping and linking verbs while correctly using verb tense and subject/verb agreement in simple and compound sentences.
RLA.6.2.11	use adjectives and adverbs in comparative and superlative forms.
RLA.6.2.12	compose sentences that contain compound subjects and compound verbs.
RLA.6.2.13	organize information by combining predicates, modifiers, phrases and/or clauses and sentences.
RLA.6.2.14	identify and correct run-on sentences, sentence fragments and redundant words/sentences.
RLA.6.2.15	use the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.6.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; atlas; almanac, encyclopedia; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms; audiovisual resources).
RLA.6.2.17	begin to demonstrate the ability to identify the source, location, media type, relevancy and content validity of available resource information.
RLA.6.2.18	identify title, author, subject, call number, publisher and copyright of resources using the card catalog, either hard copy or computer database.
RLA.6.2.19	use traditional organizers to create, read, interpret and organize information in the form of tables, graphs, diagrams and charts.
RLA.6.2.20	organize information into an outline by being able to categorize information into topic, subtopic and detail.
RLA.6.2.21	identify and use correct note taking skills.

Performance Descriptors (RLA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at the distinguished level write an effective and elaborate multiple paragraph composition correct in form and language. Students independently construct and organize research notes from print and non-print sources.
- **Mastery**
  Sixth grade students performing at the mastery level write a three to five paragraph composition employing grade level grammatical/mechanical conventions. Students apply note-taking skills to organize research data into an outline or graphic representation.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level write a basic composition with a beginning, middle and end demonstrating grade level command of grammatical and mechanical conventions. Students use fundamental note-taking skills to organize information into a basic format.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.6.3.1 recognize and exhibit oral communication skills (e.g. volume; rate; audience etiquette).
RLA.6.3.2 retell simple and detailed stories sequentially.
RLA.6.3.3 listen in order to comprehend topic and purpose (e.g. of a guest speaker; informational video; televised interview; radio news program).
RLA.6.3.4 reach consensus in group discussions or settings.

Performance Descriptors (RLA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes, commanding audience attention. Students' fluent oral reading exhibits accurate pitch, tone, rate and volume.
- **Mastery**
  Sixth grade students performing at the mastery level communicate with a peer audience for different purposes. Students demonstrate receptive audience behavior and identify components of presentations. Students read orally exhibiting elements of pitch, tone, rate and volume.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level communicate in small group situations. Students demonstrate receptive audience behavior. Students read orally in small groups.

Seventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts seventh grade students will continue to build, expand and refine prior learning. Instruction in rigorous listening, speaking and viewing skills will assist in preparing students to interact and express themselves among peers, at home and in the community. Reading comprehension and vocabulary will develop through the use of a wide variety of literary genres and strategies. Writing will utilize error-free and content-rich communication in gathering, organizing, interpreting and reporting information gained through reading. The student will be exposed to these objectives not only in the language arts but across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.7.1.1 classify the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.7.1.2 increase amount of independent reading.

RLA.7.1.3 relate common themes across a variety of literature.

RLA.7.1.4 use comprehension strategies (e.g., generalize; evaluate; infer; paraphrase).

RLA.7.1.5 determine the elements of literature (e.g., internal conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.7.1.6 identify figurative language in text (e.g., jargon; idioms).

RLA.7.1.7 make text connections to self, to other text and to the real world.

RLA.7.1.8 identify literary techniques used to interpret literature (e.g., flashback; stereotype; foreshadowing; propaganda).

RLA.7.1.9 read types of poetry and the use of inversion, rhyme and rhythm in narrative poems, ballads and lyrics.

RLA.7.1.10 recognize and understand clipped or shortened words and their meaning. (e.g., bio for biography; auto for automobile).

RLA.7.1.11 compare/contrast connotation and denotation to understand and enhance meaning of words, sentences and passages.

RLA.7.1.12 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.

RLA.7.1.13 use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level read both functional and recreational materials above grade level. Students classify literary types, support inferences and paraphrase selections making connections to other texts and global situations.
- **Mastery**
  Seventh grade students performing at the mastery level read independently grade level materials to classify literary types, explain inferences and paraphrase long selections.
- **Partial Mastery**
  Seventh grade students performing a the partial mastery level read grade level materials to recognize literary types. Students use simple summarizing and paraphrasing in a simple passage.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.7.2.1 from a prompt, use the writing process to develop a focused composition that contains specific, relevant details and transition.

RLA.7.2.2 use editing and revision techniques to vary sentence length, change sentence order, use vivid and concise words and eliminate organizational errors.

RLA.7.2.3 use the writing process to compose various types of writing (e.g., creative; informative; expository; persuasive; articles; essays; journals; letters; poetry; research/reports).

RLA.7.2.4 apply capitalization rules (e.g., languages; school subjects; regions of the U.S.; dialogue; lines of poetry).
RLA.7.2.5 apply punctuation rules (e.g., commas; apostrophes in possessives and contractions; colons; semicolons; hyphens; dashes; parentheses).
RLA.7.2.6 use pronouns, pronoun cases and antecedents in correct form.
RLA.7.2.7 use and apply correct forms of adjectives and adverbs and/or complex sentence.
RLA.7.2.8 recognize and avoid use of double negatives.
RLA.7.2.9 compose and punctuate simple, compound and complex sentences with and without conjunctions.
RLA.7.2.10 organize information by combining subjects, predicates, modifiers and appositives in a sentence.
RLA.7.2.11 use correct verb tense and subject verb agreement (e.g., irregular verbs; compound subjects; indefinite pronouns; intervening phrases).
RLA.7.2.12 edit to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.7.2.13 use title page, copyright page, table of contents, appendix, bibliography, glossary and index to locate specified information.
RLA.7.2.14 identify and use traditional reference sources for different types of information (e.g., *Reader's Guide; Books In Print;* newspapers; schedules; advertisements; audiovisual resources).
RLA.7.2.15 recognize copyright laws/issues, ethical acquisition and use of digital information in citing sources for research/report.
RLA.7.2.16 identify the source, location, media type, relevancy and content validity of available information.
RLA.7.2.17 demonstrate the ability to use the card catalog in hard copy or database to identify title, author, subject, call number, publisher and copyright resources.
RLA.7.2.18 develop an outline using prepared notes to write a paragraph.

Performance Descriptors (RLA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at the distinguished level write an elaborate composition from a prompt that is well-crafted, cohesively organized and employs sophisticated transitional elements. Students construct a detailed outline to produce a research-based report.
- **Mastery**
  Seventh grade students performing at the mastery level write a focused composition from a prompt with grade level grammatical/mechanical conventions; sentence variety, supporting details and clear transition. Students develop an outline from research notes to produce a paragraph.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level write a composition form a prompt with limited grammatical/mechanical conventions; complete sentences, basic details and evidence of transition. Students produce a simple outline from notes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.7.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; audience etiquette).
RLA.7.3.2 perform dramatizations.
RLA.7.3.3 use oral/visual information to foster exploration, questioning and imagining of a topic.
RLA.7.3.4 listen in order to comprehend topic, purpose and perspective in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.7.3.5 play a variety of roles in group discussions including active listener and discussion leader.
RLA.7.3.6 distinguish between private and public information in research and reporting.

Performance Descriptors (RLA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes. Students deliver an expressive oral presentation exhibiting effective communication skills. Students respond critically to oral and visual information to oral and visual information by exploring and questioning the topic.
- **Mastery**
  Seventh grade students performing at the mastery level communicate with an audience for different purposes. Students deliver an oral presentation exhibiting communication skills by using a prepared script. Students respond to oral and visual information by exploring and questioning the topic.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level communicate with a small group for a specific purpose. Students deliver an oral presentation by reading from a prepared script. Students respond to oral and visual information by summarizing the topic.

Eighth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eighth grade students will develop strategies that support understanding language in real life situations. Writing will focus on audience, stressing mechanics, language expression and organization of ideas. Reading comprehension and vocabulary will stress development of reading and thinking skills that enable students to comprehend and react critically to various genres of regional, national and international works. The student will utilize language arts skills across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.8.1.1 analyze the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.8.1.2 relate literary theme to global situations.

RLA.8.1.3 use comprehension strategies (e.g., make judgments; hypothesize; critique; analyze).

RLA.8.1.4 determine the elements of literature (e.g., internal/external conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.8.1.5 identify figurative language in text (e.g., onomatopoeia; pun).

RLA.8.1.6 make text connections to self, to other text and to the real world.

RLA.8.1.7 identify literary technique used to interpret literature (e.g., irony; satire; persuasive language; analogies).

RLA.8.1.8 read and identify types of poetry and the use of inversion, rhyme and rhythm (e.g., narrative poem; ballad; lyric; epic).
RLA.8.1.9 recognize and understand acronyms.
RLA.8.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.8.1.11 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students extend multiple text information by making and supporting judgments, hypothesizing, critiquing and analyzing abstract themes.
- **Mastery**
  Eighth grade students performing at the mastery level read independently and analyze grade level literary genres, make and support judgments and hypothesize to connect reader's response with author's purpose.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level read grade level materials to classify literary types, explain inferences and make judgments, demonstrate literal knowledge of text and relate text to personal experience.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.8.2.1 use the writing process to demonstrate the ability to compose a variety of written work (e.g., creative; informative; expository; persuasive; chronological explanatory; compare/contrast; cause/effect; article; essay; journal; letters; reports; poetry).
RLA.8.2.2 from a prompt, develop a focused composition that contains specific, relevant details, smooth transition and vivid, precise words.
RLA.8.2.3 use revision and editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.8.2.4 recognize and write a simple thesis statement.
RLA.8.2.5 apply all capitalization rules in writing.
RLA.8.2.6 apply punctuation rules in writing (e.g., appositives; phrases; clauses).
RLA.8.2.7 compose and punctuate grammatically correct simple, compound and complex sentences.
RLA.8.2.8 identify and correct faulty parallel sentence structure such as phrases and clauses.
RLA.8.2.9 edit and revise to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.8.2.10 conduct research using parts of a book to gather, evaluate and synthesize data from a variety of sources (e.g., print; non-print; people).
RLA.8.2.11 identify and use traditional reference sources for different types of information.
RLA.8.2.12 independently resolve information conflicts and validate information through assessing, researching and comparing data.
RLA.8.2.13 demonstrate the ability to identify the source, location, media type, relevancy and content validity of available information.
RLA.8.2.14 apply use of card catalog and/or computer databases to identify title, author, subject, call number, publisher and copyright resources to gather information for a presentation.
RLA.8.2.15 use an outline to develop a written and/or oral presentation using graphic representation.

Performance Descriptors (RLA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at the distinguished level write an elaborate composition with a concise thesis statement demonstrating command of grammatical/mechanical conventions, vivid word terminology and sophisticated transitional elements to enhance meaning. Students integrate relevant, valid information in a research-based presentation.
- **Mastery**
  Eighth grade students performing at the mastery level write a composition including a thesis statement designed for a specific audience. Students apply grade level grammatical/mechanical conventions, correct word terminology and smooth transition. Students identify information that is relevant and valid for a research-based presentation.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level write a composition with evidence of grammatical/mechanical conventions, correct word terminology, transition and use of relevant information in a simple research-based presentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.8.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; speaking etiquette; audience etiquette).

RLA.8.3.2 present an oral report with graphic aids (e.g., tables; graphs; diagrams; charts).

RLA.8.3.3 think critically about oral/visual information presented; relate personal experiences and apply the information to global situations.

RLA.8.3.4 listen in order to analyze and critique information received in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).

RLA.8.3.5 play a variety of roles in group discussions including active listener, discussion leader and/or facilitator.

RLA.8.3.6 properly use private and public information.

Performance Descriptors (RLA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at the distinguished level plan, design and deliver an enhanced oral/visual presentation justifying their opinions on global situations. Students evaluate sources and the use of public/private information, and apply communication skills required for various careers.
- **Mastery**
  Eighth grade students performing at the mastery level plan, design and deliver an effective oral presentation. Students relate personal experiences to oral/visual information, distinguish between public and private information and identify communication skills required for various careers.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level deliver oral presentations, communicate personal experiences, locate information and investigate communication skills required for various careers.

Ninth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts ninth grade students will focus on the effective use of written language in educational and occupational endeavors and interpersonal communications. Instructional delivery will be enhanced through a wide range of media. Frequent interaction with a broad array of quality literature will encourage an appreciation for the power of the written and spoken word. All language arts skills and strategies will be utilized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.9.1.1 identify historical, cultural and biographical influences of literary works.
RLA.9.1.2 recognize literary styles according to genre.
RLA.9.1.3 increase the amount of independent reading with emphasis on fiction and nonfiction.
RLA.9.1.4 develop various reading skills for literary experience, information and/or performing a task (e.g., skimming; scanning; note taking; SQ3R).
RLA.9.1.5 locate specific information in text (e.g., main and supporting ideas; specific facts; statistics; definition).
RLA.9.1.6 expand the use of various strategies to establish word meanings (e.g., context clues; affixes; multiple meanings).
RLA.9.1.7 recognize and explain the function of illustration within a specific text (e.g., pictures; artwork; graphic organizers such as maps - charts - lists - graphs).
RLA.9.1.8 recognize literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.9.1.9 identify literary elements within specific genre (e.g., point of view; theme; conflict; characterization; voice).
RLA.9.1.10 recognize the elements, structures and tone of various genres (e.g., novels; short stories; poetry; drama).

Performance Descriptors (RLA.PD.9.1)

- **Distinguished**
  Ninth grade students performing at the distinguished level read, analyze and evaluate advanced level texts to draw supportable conclusions about historical, cultural and biographical influences on literary works. Students analyze and evaluate literary devices and elements, author's voice and modes of characterization.
- **Mastery**
  Ninth grade students performing at the mastery level read, analyze and synthesize grade level texts to explain historical, cultural and biographical influences on literary works. Students explain literary devices and elements, author's voice and modes of characterization.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level read grade level texts to identify historical, cultural, and biographical influences on literary works. Students recognize basic literary devices and elements.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.9.2.1	address specific purposes (e.g., narrative; expository; descriptive; persuasive) by employing writing strategies.
RLA.9.2.2	generate topics and plan approaches to writing by using pre-writing strategies.
RLA.9.2.3	employ drafting strategies for specific writing tasks.
RLA.9.2.4	create a well-developed composition from a prompt.
RLA.9.2.5	develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement.
RLA.9.2.6	develop a composition that is focused and coherent and has a clear, logical progression of ideas (e.g., spatial order in a descriptive essay; chronological order in a process essay).
RLA.9.2.7	use different transitional devices (e.g., introductory and transitional phrases/conjunctions) between paragraphs.
RLA.9.2.8	develop a composition that uses complete and varied sentences.
RLA.9.2.9	develop a composition with appropriate and precise word choice.
RLA.9.2.10	use revision and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.9.2.11	access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog, electronic media).
RLA.9.2.12	extend note-taking skills to process and organize information.
RLA.9.2.13	recognize the concept of intellectual property and plagiarism (e.g., media copyright laws; public/private domain).
RLA.9.2.14	develop outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.9.2.15	practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.9.2.16	recognize choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.9.2.17	recognize the parts of speech within a sentence.
RLA.9.2.18	recognize the various parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive).
RLA.9.2.19	identify editing strategies to correct errors in capitalization and punctuation.
RLA.9.2.20	recognize and correct errors in subject/verb agreement.
RLA.9.2.21	recognize and correct errors in pronoun case usage and pronoun/antecedent agreement.
RLA.9.2.22	recognize and correct run-on sentences, fragments, misplaced modifiers and awkward constructions.
RLA.9.2.23	form supportable predictions, opinions, inferences and conclusions based upon text.
RLA.9.2.24	expand vocabulary through various literary works.
RLA.9.2.25	identify word etymologies to determine meaning.

Performance Descriptors (RLA.PD.9.2)

- **Distinguished**
  Ninth grade students performing at the distinguished level write compositions that contain a refined thesis statement, subtle transition, elevated diction and pertinent sentence structure germane to the writing. Students independently apply the rules of intellectual property.
- **Mastery**
  Ninth grade students performing at the mastery level write diverse compositions that integrate a clear and logical thesis statement, transitional devices, precise diction, varied sentence structure and a clear, logical progression of supported ideas. Students extend research skills by applying the rules of intellectual property to compositions.

- **Partial Mastery**
  Ninth grade students performing at the partial mastery level write compositions that show evidence of a thesis statement, basic transition, limited diction, complete sentences and a progression of ideas. Students identify and explain the rules of intellectual property.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.9.3.1 understand, communicate and follow complex directions effectively.
RLA.9.3.2 review appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in the appropriate tone and at the appropriate time).
RLA.9.3.3 review listening behaviors prior to a school wide audience activity (e.g., staying alert; resisting distractions; identifying and adapting to the speaker's purpose).
RLA.9.3.4 listen to identify the purpose, make predictions, distinguish fact from opinion and construct meaning from discussion, speech or media.
RLA.9.3.5 recognize and correct usage errors in oral language.

Performance Descriptors (RLA.PD.9.3)

- **Distinguished**
  Ninth grade students performing at the distinguished level effectively design and communicate intricate directions. Students synthesize meaning from discussion, speech and media to communicate supportable opinions.
- **Mastery**
  Ninth grade students performing at the mastery level effectively communicate complex directions. Students construct meaning from discussion, speech and media through observation and participation.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level effectively communicate simple directions. Students determine meaning from discussion, speech and media through observation and/or participation.

Tenth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts tenth grade students will use written language for educational, occupational and personal endeavors. Preparation will include critiquing oral presentations and using listening, speaking and viewing while reading and writing. Instructional delivery will be enhanced by a wide variety of media. Frequent interaction with a broadened array of literature will encourage an increased appreciation and understanding for the power of the spoken and written word across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.10.1.1 analyze and research historical, cultural and biographical influences of literary works.
RLA.10.1.2 compare and contrast literary styles according to genre.
RLA.10.1.3 increase the amount of independent reading with emphasis on American, British and World literature.
RLA.10.1.4 employ reading strategies necessary for various reading purposes (e.g., literary experience; information; and task performance).
RLA.10.1.5 continue to use context clues to establish word meaning (e.g., including words with multiple meanings).
RLA.10.1.6 recognize characteristics of author's style, purpose and tone.
RLA.10.1.7 form supportable predictions, opinions, inferences and conclusions based upon a text and/or implicit ideas.
RLA.10.1.8 explain the author's choice of literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.10.1.9 recognize persuasive language and techniques (e.g., advertisements; junk mail; news stories).
RLA.10.1.10 expand vocabulary through classic literature.
RLA.10.1.11 explain word etymologies to determine meaning.

Performance Descriptors (RLA.PD.10.1)

- **Distinguished**
  Tenth grade students performing at the distinguished level read, synthesize and evaluate advanced level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works. Students examine the universality of literature to determine the interrelationship among literary works.
- **Mastery**
  Tenth grade students performing at the mastery level read and analyze grade level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery read grade level texts to form predictions, opinions, inferences and conclusions. Students identify and explain the impact of historical, cultural, and biographical factors on literary works.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.10.2.1 employ writing strategies to address specific audiences (e.g., narrative; expository; descriptive; persuasive).
RLA.10.2.2 use pre-writing strategies to generate topics and plan approaches to writing by using timed writing tasks.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.6.1.1 know the defining characteristics, build background knowledge and use reading skills to understand a variety of West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.6.1.2 increase amount of independent reading.
RLA.6.1.3 determine theme and locate supporting details in a literary passage and across the curriculum.
RLA.6.1.4 analyze text to determine transitional words/language.
RLA.6.1.5 use comprehension skills (e.g., draw conclusions; interpret meaning).
RLA.6.1.6 determine the elements of literature (e.g. external conflict; mood) to construct meaning and recognize author's and/or reader's purpose.
RLA.6.1.7 identify figurative language in text (e.g., simile; metaphor; personification).
RLA.6.1.8 explain text connections to self, to other text and to the world for understanding a literary passage.
RLA.6.1.9 identify and classify types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quantrain).
RLA.6.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.6.1.11 use connotation and denotation to understand meaning.
RLA.6.1.12 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.6.1.13 spell commonly misspelled words, easily confused words and words with irregular endings across the curriculum.

Performance Descriptors (RLA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students identify and classify literary types, draw and justify conclusions and opinions, explain inferences and interpret author's purpose.
- **Mastery**
  Sixth grade students performing at the mastery level read independently grade level literary types, draw and justify conclusions and summarize grade level passage.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read grade level materials to recognize literary types, draw conclusions and develop a simple summary.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.6.2.1	use pre-writing and drafting strategies (e.g., drawing; clustering; brainstorming; discussion) to generate topics and plan approaches to writing tasks.
RLA.6.2.2	from a prompt, use the writing process to develop a composition that contains specific, relevant details and transitions.
RLA.6.2.3	use writing strategies to address specific writing purposes (e.g., creative; journalistic; essay; narrative; informative; persuasive) and address various audiences (e.g., peers; teachers; employers).
RLA.6.2.4	edit own writing as well as the writing of others to correct errors in organization, content, usage, mechanics and spelling.
RLA.6.2.5	demonstrate mastery of a 3-5 paragraph composition.
RLA.6.2.6	apply capitalization rules (e.g., proper adjectives; names of written works; family relationships; nationalities; religions/religious terms).
RLA.6.2.7	apply punctuation rules (e.g., commas; apostrophes in contractions and possessives both singular and plural; colons; semicolons; quotation marks; hyphens).
RLA.6.2.8	write and punctuate simple and compound sentences with conjunctions, interjections and prepositions.
RLA.6.2.9	identify and use correct pronoun case.
RLA.6.2.10	identify action, helping and linking verbs while correctly using verb tense and subject/verb agreement in simple and compound sentences.
RLA.6.2.11	use adjectives and adverbs in comparative and superlative forms.
RLA.6.2.12	compose sentences that contain compound subjects and compound verbs.
RLA.6.2.13	organize information by combining predicates, modifiers, phrases and/or clauses and sentences.
RLA.6.2.14	identify and correct run-on sentences, sentence fragments and redundant words/sentences.
RLA.6.2.15	use the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.6.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; atlas; almanac, encyclopedia; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms; audiovisual resources).
RLA.6.2.17	begin to demonstrate the ability to identify the source, location, media type, relevancy and content validity of available resource information.
RLA.6.2.18	identify title, author, subject, call number, publisher and copyright of resources using the card catalog, either hard copy or computer database.
RLA.6.2.19	use traditional organizers to create, read, interpret and organize information in the form of tables, graphs, diagrams and charts.
RLA.6.2.20	organize information into an outline by being able to categorize information into topic, subtopic and detail.
RLA.6.2.21	identify and use correct note taking skills.

Performance Descriptors (RLA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at the distinguished level write an effective and elaborate multiple paragraph composition correct in form and language. Students independently construct and organize research notes from print and non-print sources.
- **Mastery**
  Sixth grade students performing at the mastery level write a three to five paragraph composition employing grade level grammatical/mechanical conventions. Students apply note-taking skills to organize research data into an outline or graphic representation.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level write a basic composition with a beginning, middle and end demonstrating grade level command of grammatical and mechanical conventions. Students use fundamental note-taking skills to organize information into a basic format.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.6.3.1 recognize and exhibit oral communication skills (e.g. volume; rate; audience etiquette).
RLA.6.3.2 retell simple and detailed stories sequentially.
RLA.6.3.3 listen in order to comprehend topic and purpose (e.g. of a guest speaker; informational video; televised interview; radio news program).
RLA.6.3.4 reach consensus in group discussions or settings.

Performance Descriptors (RLA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes, commanding audience attention. Students' fluent oral reading exhibits accurate pitch, tone, rate and volume.
- **Mastery**
  Sixth grade students performing at the mastery level communicate with a peer audience for different purposes. Students demonstrate receptive audience behavior and identify components of presentations. Students read orally exhibiting elements of pitch, tone, rate and volume.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level communicate in small group situations. Students demonstrate receptive audience behavior. Students read orally in small groups.

Seventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts seventh grade students will continue to build, expand and refine prior learning. Instruction in rigorous listening, speaking and viewing skills will assist in preparing students to interact and express themselves among peers, at home and in the community. Reading comprehension and vocabulary will develop through the use of a wide variety of literary genres and strategies. Writing will utilize error-free and content-rich communication in gathering, organizing, interpreting and reporting information gained through reading. The student will be exposed to these objectives not only in the language arts but across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.7.1.1 classify the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.7.1.2 increase amount of independent reading.

RLA.7.1.3 relate common themes across a variety of literature.

RLA.7.1.4 use comprehension strategies (e.g., generalize; evaluate; infer; paraphrase).

RLA.7.1.5 determine the elements of literature (e.g., internal conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.7.1.6 identify figurative language in text (e.g., jargon; idioms).

RLA.7.1.7 make text connections to self, to other text and to the real world.

RLA.7.1.8 identify literary techniques used to interpret literature (e.g., flashback; stereotype; foreshadowing; propaganda).

RLA.7.1.9 read types of poetry and the use of inversion, rhyme and rhythm in narrative poems, ballads and lyrics.

RLA.7.1.10 recognize and understand clipped or shortened words and their meaning. (e.g., bio for biography; auto for automobile).

RLA.7.1.11 compare/contrast connotation and denotation to understand and enhance meaning of words, sentences and passages.

RLA.7.1.12 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.

RLA.7.1.13 use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level read both functional and recreational materials above grade level. Students classify literary types, support inferences and paraphrase selections making connections to other texts and global situations.
- **Mastery**
  Seventh grade students performing at the mastery level read independently grade level materials to classify literary types, explain inferences and paraphrase long selections.
- **Partial Mastery**
  Seventh grade students performing a the partial mastery level read grade level materials to recognize literary types. Students use simple summarizing and paraphrasing in a simple passage.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.7.2.1 from a prompt, use the writing process to develop a focused composition that contains specific, relevant details and transition.

RLA.7.2.2 use editing and revision techniques to vary sentence length, change sentence order, use vivid and concise words and eliminate organizational errors.

RLA.7.2.3 use the writing process to compose various types of writing (e.g., creative; informative; expository; persuasive; articles; essays; journals; letters; poetry; research/reports).

RLA.7.2.4 apply capitalization rules (e.g., languages; school subjects; regions of the U.S.; dialogue; lines of poetry).
RLA.7.2.5 apply punctuation rules (e.g., commas; apostrophes in possessives and contractions; colons; semicolons; hyphens; dashes; parentheses).
RLA.7.2.6 use pronouns, pronoun cases and antecedents in correct form.
RLA.7.2.7 use and apply correct forms of adjectives and adverbs and/or complex sentence.
RLA.7.2.8 recognize and avoid use of double negatives.
RLA.7.2.9 compose and punctuate simple, compound and complex sentences with and without conjunctions.
RLA.7.2.10 organize information by combining subjects, predicates, modifiers and appositives in a sentence.
RLA.7.2.11 use correct verb tense and subject verb agreement (e.g., irregular verbs; compound subjects; indefinite pronouns; intervening phrases).
RLA.7.2.12 edit to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.7.2.13 use title page, copyright page, table of contents, appendix, bibliography, glossary and index to locate specified information.
RLA.7.2.14 identify and use traditional reference sources for different types of information (e.g., *Reader's Guide; Books In Print;* newspapers; schedules; advertisements; audiovisual resources).
RLA.7.2.15 recognize copyright laws/issues, ethical acquisition and use of digital information in citing sources for research/report.
RLA.7.2.16 identify the source, location, media type, relevancy and content validity of available information.
RLA.7.2.17 demonstrate the ability to use the card catalog in hard copy or database to identify title, author, subject, call number, publisher and copyright resources.
RLA.7.2.18 develop an outline using prepared notes to write a paragraph.

Performance Descriptors (RLA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at the distinguished level write an elaborate composition from a prompt that is well-crafted, cohesively organized and employs sophisticated transitional elements. Students construct a detailed outline to produce a research-based report.
- **Mastery**
  Seventh grade students performing at the mastery level write a focused composition from a prompt with grade level grammatical/mechanical conventions; sentence variety, supporting details and clear transition. Students develop an outline from research notes to produce a paragraph.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level write a composition form a prompt with limited grammatical/mechanical conventions; complete sentences, basic details and evidence of transition. Students produce a simple outline from notes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.7.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; audience etiquette).
RLA.7.3.2 perform dramatizations.
RLA.7.3.3 use oral/visual information to foster exploration, questioning and imagining of a topic.
RLA.7.3.4 listen in order to comprehend topic, purpose and perspective in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.7.3.5 play a variety of roles in group discussions including active listener and discussion leader.
RLA.7.3.6 distinguish between private and public information in research and reporting.

Performance Descriptors (RLA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes. Students deliver an expressive oral presentation exhibiting effective communication skills. Students respond critically to oral and visual information to oral and visual information by exploring and questioning the topic.
- **Mastery**
  Seventh grade students performing at the mastery level communicate with an audience for different purposes. Students deliver an oral presentation exhibiting communication skills by using a prepared script. Students respond to oral and visual information by exploring and questioning the topic.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level communicate with a small group for a specific purpose. Students deliver an oral presentation by reading from a prepared script. Students respond to oral and visual information by summarizing the topic.

Eighth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eighth grade students will develop strategies that support understanding language in real life situations. Writing will focus on audience, stressing mechanics, language expression and organization of ideas. Reading comprehension and vocabulary will stress development of reading and thinking skills that enable students to comprehend and react critically to various genres of regional, national and international works. The student will utilize language arts skills across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.8.1.1 analyze the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.8.1.2 relate literary theme to global situations.

RLA.8.1.3 use comprehension strategies (e.g., make judgments; hypothesize; critique; analyze).

RLA.8.1.4 determine the elements of literature (e.g., internal/external conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.8.1.5 identify figurative language in text (e.g., onomatopoeia; pun).

RLA.8.1.6 make text connections to self, to other text and to the real world.

RLA.8.1.7 identify literary technique used to interpret literature (e.g., irony; satire; persuasive language; analogies).

RLA.8.1.8 read and identify types of poetry and the use of inversion, rhyme and rhythm (e.g., narrative poem; ballad; lyric; epic).
RLA.8.1.9 recognize and understand acronyms.
RLA.8.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.8.1.11 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students extend multiple text information by making and supporting judgments, hypothesizing, critiquing and analyzing abstract themes.
- **Mastery**
  Eighth grade students performing at the mastery level read independently and analyze grade level literary genres, make and support judgments and hypothesize to connect reader's response with author's purpose.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level read grade level materials to classify literary types, explain inferences and make judgments, demonstrate literal knowledge of text and relate text to personal experience.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.8.2.1 use the writing process to demonstrate the ability to compose a variety of written work (e.g., creative; informative; expository; persuasive; chronological explanatory; compare/contrast; cause/effect; article; essay; journal; letters; reports; poetry).
RLA.8.2.2 from a prompt, develop a focused composition that contains specific, relevant details, smooth transition and vivid, precise words.
RLA.8.2.3 use revision and editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.8.2.4 recognize and write a simple thesis statement.
RLA.8.2.5 apply all capitalization rules in writing.
RLA.8.2.6 apply punctuation rules in writing (e.g., appositives; phrases; clauses).
RLA.8.2.7 compose and punctuate grammatically correct simple, compound and complex sentences.
RLA.8.2.8 identify and correct faulty parallel sentence structure such as phrases and clauses.
RLA.8.2.9 edit and revise to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.8.2.10 conduct research using parts of a book to gather, evaluate and synthesize data from a variety of sources (e.g., print; non-print; people).
RLA.8.2.11 identify and use traditional reference sources for different types of information.
RLA.8.2.12 independently resolve information conflicts and validate information through assessing, researching and comparing data.
RLA.8.2.13 demonstrate the ability to identify the source, location, media type, relevancy and content validity of available information.
RLA.8.2.14 apply use of card catalog and/or computer databases to identify title, author, subject, call number, publisher and copyright resources to gather information for a presentation.
RLA.8.2.15 use an outline to develop a written and/or oral presentation using graphic representation.

Performance Descriptors (RLA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at the distinguished level write an elaborate composition with a concise thesis statement demonstrating command of grammatical/mechanical conventions, vivid word terminology and sophisticated transitional elements to enhance meaning. Students integrate relevant, valid information in a research-based presentation.
- **Mastery**
  Eighth grade students performing at the mastery level write a composition including a thesis statement designed for a specific audience. Students apply grade level grammatical/mechanical conventions, correct word terminology and smooth transition. Students identify information that is relevant and valid for a research-based presentation.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level write a composition with evidence of grammatical/mechanical conventions, correct word terminology, transition and use of relevant information in a simple research-based presentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.8.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; speaking etiquette; audience etiquette).

RLA.8.3.2 present an oral report with graphic aids (e.g., tables; graphs; diagrams; charts).

RLA.8.3.3 think critically about oral/visual information presented; relate personal experiences and apply the information to global situations.

RLA.8.3.4 listen in order to analyze and critique information received in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).

RLA.8.3.5 play a variety of roles in group discussions including active listener, discussion leader and/or facilitator.

RLA.8.3.6 properly use private and public information.

Performance Descriptors (RLA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at the distinguished level plan, design and deliver an enhanced oral/visual presentation justifying their opinions on global situations. Students evaluate sources and the use of public/private information, and apply communication skills required for various careers.
- **Mastery**
  Eighth grade students performing at the mastery level plan, design and deliver an effective oral presentation. Students relate personal experiences to oral/visual information, distinguish between public and private information and identify communication skills required for various careers.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level deliver oral presentations, communicate personal experiences, locate information and investigate communication skills required for various careers.

Ninth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts ninth grade students will focus on the effective use of written language in educational and occupational endeavors and interpersonal communications. Instructional delivery will be enhanced through a wide range of media. Frequent interaction with a broad array of quality literature will encourage an appreciation for the power of the written and spoken word. All language arts skills and strategies will be utilized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.9.1.1 identify historical, cultural and biographical influences of literary works.
RLA.9.1.2 recognize literary styles according to genre.
RLA.9.1.3 increase the amount of independent reading with emphasis on fiction and nonfiction.
RLA.9.1.4 develop various reading skills for literary experience, information and/or performing a task (e.g., skimming; scanning; note taking; SQ3R).
RLA.9.1.5 locate specific information in text (e.g., main and supporting ideas; specific facts; statistics; definition).
RLA.9.1.6 expand the use of various strategies to establish word meanings (e.g., context clues; affixes; multiple meanings).
RLA.9.1.7 recognize and explain the function of illustration within a specific text (e.g., pictures; artwork; graphic organizers such as maps - charts - lists - graphs).
RLA.9.1.8 recognize literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.9.1.9 identify literary elements within specific genre (e.g., point of view; theme; conflict; characterization; voice).
RLA.9.1.10 recognize the elements, structures and tone of various genres (e.g., novels; short stories; poetry; drama).

Performance Descriptors (RLA.PD.9.1)

- **Distinguished**
  Ninth grade students performing at the distinguished level read, analyze and evaluate advanced level texts to draw supportable conclusions about historical, cultural and biographical influences on literary works. Students analyze and evaluate literary devices and elements, author's voice and modes of characterization.
- **Mastery**
  Ninth grade students performing at the mastery level read, analyze and synthesize grade level texts to explain historical, cultural and biographical influences on literary works. Students explain literary devices and elements, author's voice and modes of characterization.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level read grade level texts to identify historical, cultural, and biographical influences on literary works. Students recognize basic literary devices and elements.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.9.2.1	address specific purposes (e.g., narrative; expository; descriptive; persuasive) by employing writing strategies.
RLA.9.2.2	generate topics and plan approaches to writing by using pre-writing strategies.
RLA.9.2.3	employ drafting strategies for specific writing tasks.
RLA.9.2.4	create a well-developed composition from a prompt.
RLA.9.2.5	develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement.
RLA.9.2.6	develop a composition that is focused and coherent and has a clear, logical progression of ideas (e.g., spatial order in a descriptive essay; chronological order in a process essay).
RLA.9.2.7	use different transitional devices (e.g., introductory and transitional phrases/conjunctions) between paragraphs.
RLA.9.2.8	develop a composition that uses complete and varied sentences.
RLA.9.2.9	develop a composition with appropriate and precise word choice.
RLA.9.2.10	use revision and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.9.2.11	access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog, electronic media).
RLA.9.2.12	extend note-taking skills to process and organize information.
RLA.9.2.13	recognize the concept of intellectual property and plagiarism (e.g., media copyright laws; public/private domain).
RLA.9.2.14	develop outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.9.2.15	practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.9.2.16	recognize choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.9.2.17	recognize the parts of speech within a sentence.
RLA.9.2.18	recognize the various parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive).
RLA.9.2.19	identify editing strategies to correct errors in capitalization and punctuation.
RLA.9.2.20	recognize and correct errors in subject/verb agreement.
RLA.9.2.21	recognize and correct errors in pronoun case usage and pronoun/antecedent agreement.
RLA.9.2.22	recognize and correct run-on sentences, fragments, misplaced modifiers and awkward constructions.
RLA.9.2.23	form supportable predictions, opinions, inferences and conclusions based upon text.
RLA.9.2.24	expand vocabulary through various literary works.
RLA.9.2.25	identify word etymologies to determine meaning.

Performance Descriptors (RLA.PD.9.2)

- **Distinguished**
  Ninth grade students performing at the distinguished level write compositions that contain a refined thesis statement, subtle transition, elevated diction and pertinent sentence structure germane to the writing. Students independently apply the rules of intellectual property.
- **Mastery**
  Ninth grade students performing at the mastery level write diverse compositions that integrate a clear and logical thesis statement, transitional devices, precise diction, varied sentence structure and a clear, logical progression of supported ideas. Students extend research skills by applying the rules of intellectual property to compositions.

- **Partial Mastery**
  Ninth grade students performing at the partial mastery level write compositions that show evidence of a thesis statement, basic transition, limited diction, complete sentences and a progression of ideas. Students identify and explain the rules of intellectual property.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.9.3.1 understand, communicate and follow complex directions effectively.
RLA.9.3.2 review appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in the appropriate tone and at the appropriate time).
RLA.9.3.3 review listening behaviors prior to a school wide audience activity (e.g., staying alert; resisting distractions; identifying and adapting to the speaker's purpose).
RLA.9.3.4 listen to identify the purpose, make predictions, distinguish fact from opinion and construct meaning from discussion, speech or media.
RLA.9.3.5 recognize and correct usage errors in oral language.

Performance Descriptors (RLA.PD.9.3)

- **Distinguished**
  Ninth grade students performing at the distinguished level effectively design and communicate intricate directions. Students synthesize meaning from discussion, speech and media to communicate supportable opinions.
- **Mastery**
  Ninth grade students performing at the mastery level effectively communicate complex directions. Students construct meaning from discussion, speech and media through observation and participation.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level effectively communicate simple directions. Students determine meaning from discussion, speech and media through observation and/or participation.

Tenth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts tenth grade students will use written language for educational, occupational and personal endeavors. Preparation will include critiquing oral presentations and using listening, speaking and viewing while reading and writing. Instructional delivery will be enhanced by a wide variety of media. Frequent interaction with a broadened array of literature will encourage an increased appreciation and understanding for the power of the spoken and written word across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.10.1.1 analyze and research historical, cultural and biographical influences of literary works.
RLA.10.1.2 compare and contrast literary styles according to genre.
RLA.10.1.3 increase the amount of independent reading with emphasis on American, British and World literature.
RLA.10.1.4 employ reading strategies necessary for various reading purposes (e.g., literary experience; information; and task performance).
RLA.10.1.5 continue to use context clues to establish word meaning (e.g., including words with multiple meanings).
RLA.10.1.6 recognize characteristics of author's style, purpose and tone.
RLA.10.1.7 form supportable predictions, opinions, inferences and conclusions based upon a text and/or implicit ideas.
RLA.10.1.8 explain the author's choice of literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.10.1.9 recognize persuasive language and techniques (e.g., advertisements; junk mail; news stories).
RLA.10.1.10 expand vocabulary through classic literature.
RLA.10.1.11 explain word etymologies to determine meaning.

Performance Descriptors (RLA.PD.10.1)

- **Distinguished**
  Tenth grade students performing at the distinguished level read, synthesize and evaluate advanced level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works. Students examine the universality of literature to determine the interrelationship among literary works.
- **Mastery**
  Tenth grade students performing at the mastery level read and analyze grade level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery read grade level texts to form predictions, opinions, inferences and conclusions. Students identify and explain the impact of historical, cultural, and biographical factors on literary works.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.10.2.1 employ writing strategies to address specific audiences (e.g., narrative; expository; descriptive; persuasive).
RLA.10.2.2 use pre-writing strategies to generate topics and plan approaches to writing by using timed writing tasks.

RLA.10.2.3 from a writing prompt, create a well-developed composition illustrating various points of view (e.g., omniscient or limited).
RLA.10.2.4 develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement which is supported by relevant details.
RLA.10.2.5 develop a timed writing that is focused and coherent and has a clear, logical progression of ideas.
RLA.10.2.6 use different transitional devices (e.g., introductory and internal transitional phrases/conjunctions).
RLA.10.2.7 develop a composition that contains sentence variety.
RLA.10.2.8 develop a composition where word choice is vivid, precise and economical.
RLA.10.2.9 correct errors in timed writing to correct errors in organization, content, usage, mechanics (e.g., capitalization; punctuation) and spelling using revision and editing strategies.
RLA.10.2.10 access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog; electronic media; newspapers).
RLA.10.2.11 extend note-taking skills to process and organize information (e.g., paraphrase; summary; quote).
RLA.10.2.12 explain the concept of intellectual property and plagiarism in all media (e.g., media copyright laws; public/private domain).
RLA.10.2.13 expand outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.10.2.14 practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.10.2.15 explain word etymologies to determine meaning.
RLA.10.2.16 compare and contrast choice of pronunciation and spelling (e.g. dictionary; spell check; thesaurus).
RLA.10.2.17 classify the parts of speech within a sentence.
RLA.10.2.18 recognize the parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive; word usage variations).
RLA.10.2.19 recognize and correct errors in subject/verb agreement with emphasis on indefinite pronouns.
RLA.10.2.20 use correct verb tense by recognizing appropriate situations for tense shifts.
RLA.10.2.21 recognize and correct errors in sentence structure (e.g., parallelism; redundancy; misplaced modifiers; subordination).

Performance Descriptors (RLA.PD.10.2)

- **Distinguished**
  Tenth grade students performing at the distinguished level write focused compositions that exhibit a well-discerned and placed thesis statement, sophisticated diction and insightful detail. Students experiment with point of view leading to the development of a personal voice. Students extend research skills by incorporating information into compositions using correct documentation.
- **Mastery**
  Tenth grade students performing at the mastery level write focused compositions. Students integrate a correctly placed thesis statement, vivid and economical diction, specific, relevant details and various points of view. Students extend research skills incorporating information into compositions using correct documentation.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery write basic compositions with limited focus. Students incorporate a thesis statement, simplistic diction, sporadic detail and a shifting point of view. Students extend research skills by transferring information into compositions using documentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.10.3.1 communicate and follow intricate directions.
RLA.10.3.2 employ appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in appropriate tone and at the appropriate time).

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.6.1.1 know the defining characteristics, build background knowledge and use reading skills to understand a variety of West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.6.1.2 increase amount of independent reading.
RLA.6.1.3 determine theme and locate supporting details in a literary passage and across the curriculum.
RLA.6.1.4 analyze text to determine transitional words/language.
RLA.6.1.5 use comprehension skills (e.g., draw conclusions; interpret meaning).
RLA.6.1.6 determine the elements of literature (e.g. external conflict; mood) to construct meaning and recognize author's and/or reader's purpose.
RLA.6.1.7 identify figurative language in text (e.g., simile; metaphor; personification).
RLA.6.1.8 explain text connections to self, to other text and to the world for understanding a literary passage.
RLA.6.1.9 identify and classify types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quantrain).
RLA.6.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.6.1.11 use connotation and denotation to understand meaning.
RLA.6.1.12 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.6.1.13 spell commonly misspelled words, easily confused words and words with irregular endings across the curriculum.

Performance Descriptors (RLA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students identify and classify literary types, draw and justify conclusions and opinions, explain inferences and interpret author's purpose.
- **Mastery**
  Sixth grade students performing at the mastery level read independently grade level literary types, draw and justify conclusions and summarize grade level passage.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read grade level materials to recognize literary types, draw conclusions and develop a simple summary.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.6.2.1	use pre-writing and drafting strategies (e.g., drawing; clustering; brainstorming; discussion) to generate topics and plan approaches to writing tasks.
RLA.6.2.2	from a prompt, use the writing process to develop a composition that contains specific, relevant details and transitions.
RLA.6.2.3	use writing strategies to address specific writing purposes (e.g., creative; journalistic; essay; narrative; informative; persuasive) and address various audiences (e.g., peers; teachers; employers).
RLA.6.2.4	edit own writing as well as the writing of others to correct errors in organization, content, usage, mechanics and spelling.
RLA.6.2.5	demonstrate mastery of a 3-5 paragraph composition.
RLA.6.2.6	apply capitalization rules (e.g., proper adjectives; names of written works; family relationships; nationalities; religions/religious terms).
RLA.6.2.7	apply punctuation rules (e.g., commas; apostrophes in contractions and possessives both singular and plural; colons; semicolons; quotation marks; hyphens).
RLA.6.2.8	write and punctuate simple and compound sentences with conjunctions, interjections and prepositions.
RLA.6.2.9	identify and use correct pronoun case.
RLA.6.2.10	identify action, helping and linking verbs while correctly using verb tense and subject/verb agreement in simple and compound sentences.
RLA.6.2.11	use adjectives and adverbs in comparative and superlative forms.
RLA.6.2.12	compose sentences that contain compound subjects and compound verbs.
RLA.6.2.13	organize information by combining predicates, modifiers, phrases and/or clauses and sentences.
RLA.6.2.14	identify and correct run-on sentences, sentence fragments and redundant words/sentences.
RLA.6.2.15	use the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.6.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; atlas; almanac, encyclopedia; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms; audiovisual resources).
RLA.6.2.17	begin to demonstrate the ability to identify the source, location, media type, relevancy and content validity of available resource information.
RLA.6.2.18	identify title, author, subject, call number, publisher and copyright of resources using the card catalog, either hard copy or computer database.
RLA.6.2.19	use traditional organizers to create, read, interpret and organize information in the form of tables, graphs, diagrams and charts.
RLA.6.2.20	organize information into an outline by being able to categorize information into topic, subtopic and detail.
RLA.6.2.21	identify and use correct note taking skills.

Performance Descriptors (RLA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at the distinguished level write an effective and elaborate multiple paragraph composition correct in form and language. Students independently construct and organize research notes from print and non-print sources.
- **Mastery**
  Sixth grade students performing at the mastery level write a three to five paragraph composition employing grade level grammatical/mechanical conventions. Students apply note-taking skills to organize research data into an outline or graphic representation.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level write a basic composition with a beginning, middle and end demonstrating grade level command of grammatical and mechanical conventions. Students use fundamental note-taking skills to organize information into a basic format.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.6.3.1 recognize and exhibit oral communication skills (e.g. volume; rate; audience etiquette).
RLA.6.3.2 retell simple and detailed stories sequentially.
RLA.6.3.3 listen in order to comprehend topic and purpose (e.g. of a guest speaker; informational video; televised interview; radio news program).
RLA.6.3.4 reach consensus in group discussions or settings.

Performance Descriptors (RLA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes, commanding audience attention. Students' fluent oral reading exhibits accurate pitch, tone, rate and volume.
- **Mastery**
  Sixth grade students performing at the mastery level communicate with a peer audience for different purposes. Students demonstrate receptive audience behavior and identify components of presentations. Students read orally exhibiting elements of pitch, tone, rate and volume.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level communicate in small group situations. Students demonstrate receptive audience behavior. Students read orally in small groups.

Seventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts seventh grade students will continue to build, expand and refine prior learning. Instruction in rigorous listening, speaking and viewing skills will assist in preparing students to interact and express themselves among peers, at home and in the community. Reading comprehension and vocabulary will develop through the use of a wide variety of literary genres and strategies. Writing will utilize error-free and content-rich communication in gathering, organizing, interpreting and reporting information gained through reading. The student will be exposed to these objectives not only in the language arts but across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.7.1.1 classify the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.7.1.2 increase amount of independent reading.

RLA.7.1.3 relate common themes across a variety of literature.

RLA.7.1.4 use comprehension strategies (e.g., generalize; evaluate; infer; paraphrase).

RLA.7.1.5 determine the elements of literature (e.g., internal conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.7.1.6 identify figurative language in text (e.g., jargon; idioms).

RLA.7.1.7 make text connections to self, to other text and to the real world.

RLA.7.1.8 identify literary techniques used to interpret literature (e.g., flashback; stereotype; foreshadowing; propaganda).

RLA.7.1.9 read types of poetry and the use of inversion, rhyme and rhythm in narrative poems, ballads and lyrics.

RLA.7.1.10 recognize and understand clipped or shortened words and their meaning. (e.g., bio for biography; auto for automobile).

RLA.7.1.11 compare/contrast connotation and denotation to understand and enhance meaning of words, sentences and passages.

RLA.7.1.12 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.

RLA.7.1.13 use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level read both functional and recreational materials above grade level. Students classify literary types, support inferences and paraphrase selections making connections to other texts and global situations.
- **Mastery**
  Seventh grade students performing at the mastery level read independently grade level materials to classify literary types, explain inferences and paraphrase long selections.
- **Partial Mastery**
  Seventh grade students performing a the partial mastery level read grade level materials to recognize literary types. Students use simple summarizing and paraphrasing in a simple passage.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.7.2.1 from a prompt, use the writing process to develop a focused composition that contains specific, relevant details and transition.

RLA.7.2.2 use editing and revision techniques to vary sentence length, change sentence order, use vivid and concise words and eliminate organizational errors.

RLA.7.2.3 use the writing process to compose various types of writing (e.g., creative; informative; expository; persuasive; articles; essays; journals; letters; poetry; research/reports).

RLA.7.2.4 apply capitalization rules (e.g., languages; school subjects; regions of the U.S.; dialogue; lines of poetry).
RLA.7.2.5 apply punctuation rules (e.g., commas; apostrophes in possessives and contractions; colons; semicolons; hyphens; dashes; parentheses).
RLA.7.2.6 use pronouns, pronoun cases and antecedents in correct form.
RLA.7.2.7 use and apply correct forms of adjectives and adverbs and/or complex sentence.
RLA.7.2.8 recognize and avoid use of double negatives.
RLA.7.2.9 compose and punctuate simple, compound and complex sentences with and without conjunctions.
RLA.7.2.10 organize information by combining subjects, predicates, modifiers and appositives in a sentence.
RLA.7.2.11 use correct verb tense and subject verb agreement (e.g., irregular verbs; compound subjects; indefinite pronouns; intervening phrases).
RLA.7.2.12 edit to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.7.2.13 use title page, copyright page, table of contents, appendix, bibliography, glossary and index to locate specified information.
RLA.7.2.14 identify and use traditional reference sources for different types of information (e.g., *Reader's Guide; Books In Print;* newspapers; schedules; advertisements; audiovisual resources).
RLA.7.2.15 recognize copyright laws/issues, ethical acquisition and use of digital information in citing sources for research/report.
RLA.7.2.16 identify the source, location, media type, relevancy and content validity of available information.
RLA.7.2.17 demonstrate the ability to use the card catalog in hard copy or database to identify title, author, subject, call number, publisher and copyright resources.
RLA.7.2.18 develop an outline using prepared notes to write a paragraph.

Performance Descriptors (RLA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at the distinguished level write an elaborate composition from a prompt that is well-crafted, cohesively organized and employs sophisticated transitional elements. Students construct a detailed outline to produce a research-based report.
- **Mastery**
  Seventh grade students performing at the mastery level write a focused composition from a prompt with grade level grammatical/mechanical conventions; sentence variety, supporting details and clear transition. Students develop an outline from research notes to produce a paragraph.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level write a composition form a prompt with limited grammatical/mechanical conventions; complete sentences, basic details and evidence of transition. Students produce a simple outline from notes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.7.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; audience etiquette).
RLA.7.3.2 perform dramatizations.
RLA.7.3.3 use oral/visual information to foster exploration, questioning and imagining of a topic.
RLA.7.3.4 listen in order to comprehend topic, purpose and perspective in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.7.3.5 play a variety of roles in group discussions including active listener and discussion leader.
RLA.7.3.6 distinguish between private and public information in research and reporting.

Performance Descriptors (RLA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes. Students deliver an expressive oral presentation exhibiting effective communication skills. Students respond critically to oral and visual information to oral and visual information by exploring and questioning the topic.
- **Mastery**
  Seventh grade students performing at the mastery level communicate with an audience for different purposes. Students deliver an oral presentation exhibiting communication skills by using a prepared script. Students respond to oral and visual information by exploring and questioning the topic.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level communicate with a small group for a specific purpose. Students deliver an oral presentation by reading from a prepared script. Students respond to oral and visual information by summarizing the topic.

Eighth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eighth grade students will develop strategies that support understanding language in real life situations. Writing will focus on audience, stressing mechanics, language expression and organization of ideas. Reading comprehension and vocabulary will stress development of reading and thinking skills that enable students to comprehend and react critically to various genres of regional, national and international works. The student will utilize language arts skills across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.8.1.1 analyze the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.8.1.2 relate literary theme to global situations.

RLA.8.1.3 use comprehension strategies (e.g., make judgments; hypothesize; critique; analyze).

RLA.8.1.4 determine the elements of literature (e.g., internal/external conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.8.1.5 identify figurative language in text (e.g., onomatopoeia; pun).

RLA.8.1.6 make text connections to self, to other text and to the real world.

RLA.8.1.7 identify literary technique used to interpret literature (e.g., irony; satire; persuasive language; analogies).

RLA.8.1.8 read and identify types of poetry and the use of inversion, rhyme and rhythm (e.g., narrative poem; ballad; lyric; epic).
RLA.8.1.9 recognize and understand acronyms.
RLA.8.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.8.1.11 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students extend multiple text information by making and supporting judgments, hypothesizing, critiquing and analyzing abstract themes.
- **Mastery**
  Eighth grade students performing at the mastery level read independently and analyze grade level literary genres, make and support judgments and hypothesize to connect reader's response with author's purpose.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level read grade level materials to classify literary types, explain inferences and make judgments, demonstrate literal knowledge of text and relate text to personal experience.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.8.2.1 use the writing process to demonstrate the ability to compose a variety of written work (e.g., creative; informative; expository; persuasive; chronological explanatory; compare/contrast; cause/effect; article; essay; journal; letters; reports; poetry).
RLA.8.2.2 from a prompt, develop a focused composition that contains specific, relevant details, smooth transition and vivid, precise words.
RLA.8.2.3 use revision and editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.8.2.4 recognize and write a simple thesis statement.
RLA.8.2.5 apply all capitalization rules in writing.
RLA.8.2.6 apply punctuation rules in writing (e.g., appositives; phrases; clauses).
RLA.8.2.7 compose and punctuate grammatically correct simple, compound and complex sentences.
RLA.8.2.8 identify and correct faulty parallel sentence structure such as phrases and clauses.
RLA.8.2.9 edit and revise to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.8.2.10 conduct research using parts of a book to gather, evaluate and synthesize data from a variety of sources (e.g., print; non-print; people).
RLA.8.2.11 identify and use traditional reference sources for different types of information.
RLA.8.2.12 independently resolve information conflicts and validate information through assessing, researching and comparing data.
RLA.8.2.13 demonstrate the ability to identify the source, location, media type, relevancy and content validity of available information.
RLA.8.2.14 apply use of card catalog and/or computer databases to identify title, author, subject, call number, publisher and copyright resources to gather information for a presentation.
RLA.8.2.15 use an outline to develop a written and/or oral presentation using graphic representation.

Performance Descriptors (RLA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at the distinguished level write an elaborate composition with a concise thesis statement demonstrating command of grammatical/mechanical conventions, vivid word terminology and sophisticated transitional elements to enhance meaning. Students integrate relevant, valid information in a research-based presentation.
- **Mastery**
  Eighth grade students performing at the mastery level write a composition including a thesis statement designed for a specific audience. Students apply grade level grammatical/mechanical conventions, correct word terminology and smooth transition. Students identify information that is relevant and valid for a research-based presentation.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level write a composition with evidence of grammatical/mechanical conventions, correct word terminology, transition and use of relevant information in a simple research-based presentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.8.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; speaking etiquette; audience etiquette).

RLA.8.3.2 present an oral report with graphic aids (e.g., tables; graphs; diagrams; charts).

RLA.8.3.3 think critically about oral/visual information presented; relate personal experiences and apply the information to global situations.

RLA.8.3.4 listen in order to analyze and critique information received in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).

RLA.8.3.5 play a variety of roles in group discussions including active listener, discussion leader and/or facilitator.

RLA.8.3.6 properly use private and public information.

Performance Descriptors (RLA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at the distinguished level plan, design and deliver an enhanced oral/visual presentation justifying their opinions on global situations. Students evaluate sources and the use of public/private information, and apply communication skills required for various careers.
- **Mastery**
  Eighth grade students performing at the mastery level plan, design and deliver an effective oral presentation. Students relate personal experiences to oral/visual information, distinguish between public and private information and identify communication skills required for various careers.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level deliver oral presentations, communicate personal experiences, locate information and investigate communication skills required for various careers.

Ninth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts ninth grade students will focus on the effective use of written language in educational and occupational endeavors and interpersonal communications. Instructional delivery will be enhanced through a wide range of media. Frequent interaction with a broad array of quality literature will encourage an appreciation for the power of the written and spoken word. All language arts skills and strategies will be utilized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.9.1.1 identify historical, cultural and biographical influences of literary works.
RLA.9.1.2 recognize literary styles according to genre.
RLA.9.1.3 increase the amount of independent reading with emphasis on fiction and nonfiction.
RLA.9.1.4 develop various reading skills for literary experience, information and/or performing a task (e.g., skimming; scanning; note taking; SQ3R).
RLA.9.1.5 locate specific information in text (e.g., main and supporting ideas; specific facts; statistics; definition).
RLA.9.1.6 expand the use of various strategies to establish word meanings (e.g., context clues; affixes; multiple meanings).
RLA.9.1.7 recognize and explain the function of illustration within a specific text (e.g., pictures; artwork; graphic organizers such as maps - charts - lists - graphs).
RLA.9.1.8 recognize literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.9.1.9 identify literary elements within specific genre (e.g., point of view; theme; conflict; characterization; voice).
RLA.9.1.10 recognize the elements, structures and tone of various genres (e.g., novels; short stories; poetry; drama).

Performance Descriptors (RLA.PD.9.1)

- **Distinguished**
  Ninth grade students performing at the distinguished level read, analyze and evaluate advanced level texts to draw supportable conclusions about historical, cultural and biographical influences on literary works. Students analyze and evaluate literary devices and elements, author's voice and modes of characterization.
- **Mastery**
  Ninth grade students performing at the mastery level read, analyze and synthesize grade level texts to explain historical, cultural and biographical influences on literary works. Students explain literary devices and elements, author's voice and modes of characterization.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level read grade level texts to identify historical, cultural, and biographical influences on literary works. Students recognize basic literary devices and elements.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.9.2.1	address specific purposes (e.g., narrative; expository; descriptive; persuasive) by employing writing strategies.
RLA.9.2.2	generate topics and plan approaches to writing by using pre-writing strategies.
RLA.9.2.3	employ drafting strategies for specific writing tasks.
RLA.9.2.4	create a well-developed composition from a prompt.
RLA.9.2.5	develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement.
RLA.9.2.6	develop a composition that is focused and coherent and has a clear, logical progression of ideas (e.g., spatial order in a descriptive essay; chronological order in a process essay).
RLA.9.2.7	use different transitional devices (e.g., introductory and transitional phrases/conjunctions) between paragraphs.
RLA.9.2.8	develop a composition that uses complete and varied sentences.
RLA.9.2.9	develop a composition with appropriate and precise word choice.
RLA.9.2.10	use revision and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.9.2.11	access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog, electronic media).
RLA.9.2.12	extend note-taking skills to process and organize information.
RLA.9.2.13	recognize the concept of intellectual property and plagiarism (e.g., media copyright laws; public/private domain).
RLA.9.2.14	develop outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.9.2.15	practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.9.2.16	recognize choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.9.2.17	recognize the parts of speech within a sentence.
RLA.9.2.18	recognize the various parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive).
RLA.9.2.19	identify editing strategies to correct errors in capitalization and punctuation.
RLA.9.2.20	recognize and correct errors in subject/verb agreement.
RLA.9.2.21	recognize and correct errors in pronoun case usage and pronoun/antecedent agreement.
RLA.9.2.22	recognize and correct run-on sentences, fragments, misplaced modifiers and awkward constructions.
RLA.9.2.23	form supportable predictions, opinions, inferences and conclusions based upon text.
RLA.9.2.24	expand vocabulary through various literary works.
RLA.9.2.25	identify word etymologies to determine meaning.

Performance Descriptors (RLA.PD.9.2)

- **Distinguished**
  Ninth grade students performing at the distinguished level write compositions that contain a refined thesis statement, subtle transition, elevated diction and pertinent sentence structure germane to the writing. Students independently apply the rules of intellectual property.
- **Mastery**
  Ninth grade students performing at the mastery level write diverse compositions that integrate a clear and logical thesis statement, transitional devices, precise diction, varied sentence structure and a clear, logical progression of supported ideas. Students extend research skills by applying the rules of intellectual property to compositions.

- **Partial Mastery**
  Ninth grade students performing at the partial mastery level write compositions that show evidence of a thesis statement, basic transition, limited diction, complete sentences and a progression of ideas. Students identify and explain the rules of intellectual property.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.9.3.1 understand, communicate and follow complex directions effectively.
RLA.9.3.2 review appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in the appropriate tone and at the appropriate time).
RLA.9.3.3 review listening behaviors prior to a school wide audience activity (e.g., staying alert; resisting distractions; identifying and adapting to the speaker's purpose).
RLA.9.3.4 listen to identify the purpose, make predictions, distinguish fact from opinion and construct meaning from discussion, speech or media.
RLA.9.3.5 recognize and correct usage errors in oral language.

Performance Descriptors (RLA.PD.9.3)

- **Distinguished**
  Ninth grade students performing at the distinguished level effectively design and communicate intricate directions. Students synthesize meaning from discussion, speech and media to communicate supportable opinions.
- **Mastery**
  Ninth grade students performing at the mastery level effectively communicate complex directions. Students construct meaning from discussion, speech and media through observation and participation.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level effectively communicate simple directions. Students determine meaning from discussion, speech and media through observation and/or participation.

Tenth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts tenth grade students will use written language for educational, occupational and personal endeavors. Preparation will include critiquing oral presentations and using listening, speaking and viewing while reading and writing. Instructional delivery will be enhanced by a wide variety of media. Frequent interaction with a broadened array of literature will encourage an increased appreciation and understanding for the power of the spoken and written word across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.10.1.1 analyze and research historical, cultural and biographical influences of literary works.
RLA.10.1.2 compare and contrast literary styles according to genre.
RLA.10.1.3 increase the amount of independent reading with emphasis on American, British and World literature.
RLA.10.1.4 employ reading strategies necessary for various reading purposes (e.g., literary experience; information; and task performance).
RLA.10.1.5 continue to use context clues to establish word meaning (e.g., including words with multiple meanings).
RLA.10.1.6 recognize characteristics of author's style, purpose and tone.
RLA.10.1.7 form supportable predictions, opinions, inferences and conclusions based upon a text and/or implicit ideas.
RLA.10.1.8 explain the author's choice of literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.10.1.9 recognize persuasive language and techniques (e.g., advertisements; junk mail; news stories).
RLA.10.1.10 expand vocabulary through classic literature.
RLA.10.1.11 explain word etymologies to determine meaning.

Performance Descriptors (RLA.PD.10.1)

- **Distinguished**
  Tenth grade students performing at the distinguished level read, synthesize and evaluate advanced level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works. Students examine the universality of literature to determine the interrelationship among literary works.
- **Mastery**
  Tenth grade students performing at the mastery level read and analyze grade level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery read grade level texts to form predictions, opinions, inferences and conclusions. Students identify and explain the impact of historical, cultural, and biographical factors on literary works.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.10.2.1 employ writing strategies to address specific audiences (e.g., narrative; expository; descriptive; persuasive).
RLA.10.2.2 use pre-writing strategies to generate topics and plan approaches to writing by using timed writing tasks.

RLA.10.2.3 from a writing prompt, create a well-developed composition illustrating various points of view (e.g., omniscient or limited).
RLA.10.2.4 develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement which is supported by relevant details.
RLA.10.2.5 develop a timed writing that is focused and coherent and has a clear, logical progression of ideas.
RLA.10.2.6 use different transitional devices (e.g., introductory and internal transitional phrases/conjunctions).
RLA.10.2.7 develop a composition that contains sentence variety.
RLA.10.2.8 develop a composition where word choice is vivid, precise and economical.
RLA.10.2.9 correct errors in timed writing to correct errors in organization, content, usage, mechanics (e.g., capitalization; punctuation) and spelling using revision and editing strategies.
RLA.10.2.10 access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog; electronic media; newspapers).
RLA.10.2.11 extend note-taking skills to process and organize information (e.g., paraphrase; summary; quote).
RLA.10.2.12 explain the concept of intellectual property and plagiarism in all media (e.g., media copyright laws; public/private domain).
RLA.10.2.13 expand outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.10.2.14 practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.10.2.15 explain word etymologies to determine meaning.
RLA.10.2.16 compare and contrast choice of pronunciation and spelling (e.g. dictionary; spell check; thesaurus).
RLA.10.2.17 classify the parts of speech within a sentence.
RLA.10.2.18 recognize the parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive; word usage variations).
RLA.10.2.19 recognize and correct errors in subject/verb agreement with emphasis on indefinite pronouns.
RLA.10.2.20 use correct verb tense by recognizing appropriate situations for tense shifts.
RLA.10.2.21 recognize and correct errors in sentence structure (e.g., parallelism; redundancy; misplaced modifiers; subordination).

Performance Descriptors (RLA.PD.10.2)

- **Distinguished**
  Tenth grade students performing at the distinguished level write focused compositions that exhibit a well-discerned and placed thesis statement, sophisticated diction and insightful detail. Students experiment with point of view leading to the development of a personal voice. Students extend research skills by incorporating information into compositions using correct documentation.
- **Mastery**
  Tenth grade students performing at the mastery level write focused compositions. Students integrate a correctly placed thesis statement, vivid and economical diction, specific, relevant details and various points of view. Students extend research skills incorporating information into compositions using correct documentation.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery write basic compositions with limited focus. Students incorporate a thesis statement, simplistic diction, sporadic detail and a shifting point of view. Students extend research skills by transferring information into compositions using documentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.10.3.1 communicate and follow intricate directions.
RLA.10.3.2 employ appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in appropriate tone and at the appropriate time).

RLA.10.3.3 listen to a speech (e.g., funeral orations from Shakespeare's *Julius Caesar*) to identify specific examples of central idea, fact versus opinion and persuasive devices.

RLA.10.3.4 recognize and correct usage errors in oral language (e.g., distinguishing colloquial - dialectical - slang - formal versus informal).

RLA.10.3.5 practice and master listening, speaking and viewing by using a variety of techniques (e.g., videos, power point presentations; audiotape; web pages).

Performance Descriptors (RLA.PD.10.3)

- **Distinguished**
  Tenth grade students performing at the distinguished level automatically evaluate and apply conventions of oral language. Students assess the merit of persuasive devices from multiple sources to determine and debate credibility.
- **Mastery**
  Tenth grade students performing at the mastery level recognize and apply conventions of oral language by distinguishing colloquial, dialectical, slang and formal language. Students construct meaning from multiple sources by analyzing persuasive devices to determine credibility.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery level recognize conventions of oral language. Students determine basic meaning from multiple sources by identifying and paraphrasing persuasive language.

Eleventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eleventh grade students will refine and enhance foundational literary and communication skills through academic rigor and depth. Career formalization, including college entrance exam preparation and workplace readiness skills, will become a primary focus. Challenging research and writing skills will be emphasized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.11.1.1 research, analyze and evaluate the historical, cultural and biographical influences of literary works.

RLA.11.1.2 analyze literary styles according to genre.

RLA.11.1.3 increase the amount of independent reading with emphasis on classic American, British and World literature.

RLA.11.1.4 select appropriate reading strategies necessary for various reading purposes (e.g., literary experience; information; task performance).

RLA.11.1.5 analyze characteristics of author's style, purpose and technique from a variety of selections (e.g., critical review; literary/character analysis).

RLA.11.1.6 draw supportable conclusions, make inferences and generalizations, and interpret character traits.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.6.1.1 know the defining characteristics, build background knowledge and use reading skills to understand a variety of West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.6.1.2 increase amount of independent reading.
RLA.6.1.3 determine theme and locate supporting details in a literary passage and across the curriculum.
RLA.6.1.4 analyze text to determine transitional words/language.
RLA.6.1.5 use comprehension skills (e.g., draw conclusions; interpret meaning).
RLA.6.1.6 determine the elements of literature (e.g. external conflict; mood) to construct meaning and recognize author's and/or reader's purpose.
RLA.6.1.7 identify figurative language in text (e.g., simile; metaphor; personification).
RLA.6.1.8 explain text connections to self, to other text and to the world for understanding a literary passage.
RLA.6.1.9 identify and classify types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quantrain).
RLA.6.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.6.1.11 use connotation and denotation to understand meaning.
RLA.6.1.12 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.6.1.13 spell commonly misspelled words, easily confused words and words with irregular endings across the curriculum.

Performance Descriptors (RLA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students identify and classify literary types, draw and justify conclusions and opinions, explain inferences and interpret author's purpose.
- **Mastery**
  Sixth grade students performing at the mastery level read independently grade level literary types, draw and justify conclusions and summarize grade level passage.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read grade level materials to recognize literary types, draw conclusions and develop a simple summary.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.6.2.1	use pre-writing and drafting strategies (e.g., drawing; clustering; brainstorming; discussion) to generate topics and plan approaches to writing tasks.
RLA.6.2.2	from a prompt, use the writing process to develop a composition that contains specific, relevant details and transitions.
RLA.6.2.3	use writing strategies to address specific writing purposes (e.g., creative; journalistic; essay; narrative; informative; persuasive) and address various audiences (e.g., peers; teachers; employers).
RLA.6.2.4	edit own writing as well as the writing of others to correct errors in organization, content, usage, mechanics and spelling.
RLA.6.2.5	demonstrate mastery of a 3-5 paragraph composition.
RLA.6.2.6	apply capitalization rules (e.g., proper adjectives; names of written works; family relationships; nationalities; religions/religious terms).
RLA.6.2.7	apply punctuation rules (e.g., commas; apostrophes in contractions and possessives both singular and plural; colons; semicolons; quotation marks; hyphens).
RLA.6.2.8	write and punctuate simple and compound sentences with conjunctions, interjections and prepositions.
RLA.6.2.9	identify and use correct pronoun case.
RLA.6.2.10	identify action, helping and linking verbs while correctly using verb tense and subject/verb agreement in simple and compound sentences.
RLA.6.2.11	use adjectives and adverbs in comparative and superlative forms.
RLA.6.2.12	compose sentences that contain compound subjects and compound verbs.
RLA.6.2.13	organize information by combining predicates, modifiers, phrases and/or clauses and sentences.
RLA.6.2.14	identify and correct run-on sentences, sentence fragments and redundant words/sentences.
RLA.6.2.15	use the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.6.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; atlas; almanac, encyclopedia; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms; audiovisual resources).
RLA.6.2.17	begin to demonstrate the ability to identify the source, location, media type, relevancy and content validity of available resource information.
RLA.6.2.18	identify title, author, subject, call number, publisher and copyright of resources using the card catalog, either hard copy or computer database.
RLA.6.2.19	use traditional organizers to create, read, interpret and organize information in the form of tables, graphs, diagrams and charts.
RLA.6.2.20	organize information into an outline by being able to categorize information into topic, subtopic and detail.
RLA.6.2.21	identify and use correct note taking skills.

Performance Descriptors (RLA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at the distinguished level write an effective and elaborate multiple paragraph composition correct in form and language. Students independently construct and organize research notes from print and non-print sources.
- **Mastery**
  Sixth grade students performing at the mastery level write a three to five paragraph composition employing grade level grammatical/mechanical conventions. Students apply note-taking skills to organize research data into an outline or graphic representation.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level write a basic composition with a beginning, middle and end demonstrating grade level command of grammatical and mechanical conventions. Students use fundamental note-taking skills to organize information into a basic format.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.6.3.1 recognize and exhibit oral communication skills (e.g. volume; rate; audience etiquette).
RLA.6.3.2 retell simple and detailed stories sequentially.
RLA.6.3.3 listen in order to comprehend topic and purpose (e.g. of a guest speaker; informational video; televised interview; radio news program).
RLA.6.3.4 reach consensus in group discussions or settings.

Performance Descriptors (RLA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes, commanding audience attention. Students' fluent oral reading exhibits accurate pitch, tone, rate and volume.
- **Mastery**
  Sixth grade students performing at the mastery level communicate with a peer audience for different purposes. Students demonstrate receptive audience behavior and identify components of presentations. Students read orally exhibiting elements of pitch, tone, rate and volume.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level communicate in small group situations. Students demonstrate receptive audience behavior. Students read orally in small groups.

Seventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts seventh grade students will continue to build, expand and refine prior learning. Instruction in rigorous listening, speaking and viewing skills will assist in preparing students to interact and express themselves among peers, at home and in the community. Reading comprehension and vocabulary will develop through the use of a wide variety of literary genres and strategies. Writing will utilize error-free and content-rich communication in gathering, organizing, interpreting and reporting information gained through reading. The student will be exposed to these objectives not only in the language arts but across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.7.1.1 classify the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.7.1.2 increase amount of independent reading.

RLA.7.1.3 relate common themes across a variety of literature.

RLA.7.1.4 use comprehension strategies (e.g., generalize; evaluate; infer; paraphrase).

RLA.7.1.5 determine the elements of literature (e.g., internal conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.7.1.6 identify figurative language in text (e.g., jargon; idioms).

RLA.7.1.7 make text connections to self, to other text and to the real world.

RLA.7.1.8 identify literary techniques used to interpret literature (e.g., flashback; stereotype; foreshadowing; propaganda).

RLA.7.1.9 read types of poetry and the use of inversion, rhyme and rhythm in narrative poems, ballads and lyrics.

RLA.7.1.10 recognize and understand clipped or shortened words and their meaning. (e.g., bio for biography; auto for automobile).

RLA.7.1.11 compare/contrast connotation and denotation to understand and enhance meaning of words, sentences and passages.

RLA.7.1.12 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.

RLA.7.1.13 use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level read both functional and recreational materials above grade level. Students classify literary types, support inferences and paraphrase selections making connections to other texts and global situations.
- **Mastery**
  Seventh grade students performing at the mastery level read independently grade level materials to classify literary types, explain inferences and paraphrase long selections.
- **Partial Mastery**
  Seventh grade students performing a the partial mastery level read grade level materials to recognize literary types. Students use simple summarizing and paraphrasing in a simple passage.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.7.2.1 from a prompt, use the writing process to develop a focused composition that contains specific, relevant details and transition.

RLA.7.2.2 use editing and revision techniques to vary sentence length, change sentence order, use vivid and concise words and eliminate organizational errors.

RLA.7.2.3 use the writing process to compose various types of writing (e.g., creative; informative; expository; persuasive; articles; essays; journals; letters; poetry; research/reports).

RLA.7.2.4 apply capitalization rules (e.g., languages; school subjects; regions of the U.S.; dialogue; lines of poetry).
RLA.7.2.5 apply punctuation rules (e.g., commas; apostrophes in possessives and contractions; colons; semicolons; hyphens; dashes; parentheses).
RLA.7.2.6 use pronouns, pronoun cases and antecedents in correct form.
RLA.7.2.7 use and apply correct forms of adjectives and adverbs and/or complex sentence.
RLA.7.2.8 recognize and avoid use of double negatives.
RLA.7.2.9 compose and punctuate simple, compound and complex sentences with and without conjunctions.
RLA.7.2.10 organize information by combining subjects, predicates, modifiers and appositives in a sentence.
RLA.7.2.11 use correct verb tense and subject verb agreement (e.g., irregular verbs; compound subjects; indefinite pronouns; intervening phrases).
RLA.7.2.12 edit to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.7.2.13 use title page, copyright page, table of contents, appendix, bibliography, glossary and index to locate specified information.
RLA.7.2.14 identify and use traditional reference sources for different types of information (e.g., *Reader's Guide; Books In Print;* newspapers; schedules; advertisements; audiovisual resources).
RLA.7.2.15 recognize copyright laws/issues, ethical acquisition and use of digital information in citing sources for research/report.
RLA.7.2.16 identify the source, location, media type, relevancy and content validity of available information.
RLA.7.2.17 demonstrate the ability to use the card catalog in hard copy or database to identify title, author, subject, call number, publisher and copyright resources.
RLA.7.2.18 develop an outline using prepared notes to write a paragraph.

Performance Descriptors (RLA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at the distinguished level write an elaborate composition from a prompt that is well-crafted, cohesively organized and employs sophisticated transitional elements. Students construct a detailed outline to produce a research-based report.
- **Mastery**
  Seventh grade students performing at the mastery level write a focused composition from a prompt with grade level grammatical/mechanical conventions; sentence variety, supporting details and clear transition. Students develop an outline from research notes to produce a paragraph.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level write a composition form a prompt with limited grammatical/mechanical conventions; complete sentences, basic details and evidence of transition. Students produce a simple outline from notes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.7.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; audience etiquette).
RLA.7.3.2 perform dramatizations.
RLA.7.3.3 use oral/visual information to foster exploration, questioning and imagining of a topic.
RLA.7.3.4 listen in order to comprehend topic, purpose and perspective in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.7.3.5 play a variety of roles in group discussions including active listener and discussion leader.
RLA.7.3.6 distinguish between private and public information in research and reporting.

Performance Descriptors (RLA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes. Students deliver an expressive oral presentation exhibiting effective communication skills. Students respond critically to oral and visual information to oral and visual information by exploring and questioning the topic.
- **Mastery**
  Seventh grade students performing at the mastery level communicate with an audience for different purposes. Students deliver an oral presentation exhibiting communication skills by using a prepared script. Students respond to oral and visual information by exploring and questioning the topic.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level communicate with a small group for a specific purpose. Students deliver an oral presentation by reading from a prepared script. Students respond to oral and visual information by summarizing the topic.

Eighth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eighth grade students will develop strategies that support understanding language in real life situations. Writing will focus on audience, stressing mechanics, language expression and organization of ideas. Reading comprehension and vocabulary will stress development of reading and thinking skills that enable students to comprehend and react critically to various genres of regional, national and international works. The student will utilize language arts skills across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.8.1.1 analyze the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.8.1.2 relate literary theme to global situations.

RLA.8.1.3 use comprehension strategies (e.g., make judgments; hypothesize; critique; analyze).

RLA.8.1.4 determine the elements of literature (e.g., internal/external conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.8.1.5 identify figurative language in text (e.g., onomatopoeia; pun).

RLA.8.1.6 make text connections to self, to other text and to the real world.

RLA.8.1.7 identify literary technique used to interpret literature (e.g., irony; satire; persuasive language; analogies).

RLA.8.1.8 read and identify types of poetry and the use of inversion, rhyme and rhythm (e.g., narrative poem; ballad; lyric; epic).
RLA.8.1.9 recognize and understand acronyms.
RLA.8.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.8.1.11 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students extend multiple text information by making and supporting judgments, hypothesizing, critiquing and analyzing abstract themes.
- **Mastery**
  Eighth grade students performing at the mastery level read independently and analyze grade level literary genres, make and support judgments and hypothesize to connect reader's response with author's purpose.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level read grade level materials to classify literary types, explain inferences and make judgments, demonstrate literal knowledge of text and relate text to personal experience.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.8.2.1 use the writing process to demonstrate the ability to compose a variety of written work (e.g., creative; informative; expository; persuasive; chronological explanatory; compare/contrast; cause/effect; article; essay; journal; letters; reports; poetry).
RLA.8.2.2 from a prompt, develop a focused composition that contains specific, relevant details, smooth transition and vivid, precise words.
RLA.8.2.3 use revision and editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.8.2.4 recognize and write a simple thesis statement.
RLA.8.2.5 apply all capitalization rules in writing.
RLA.8.2.6 apply punctuation rules in writing (e.g., appositives; phrases; clauses).
RLA.8.2.7 compose and punctuate grammatically correct simple, compound and complex sentences.
RLA.8.2.8 identify and correct faulty parallel sentence structure such as phrases and clauses.
RLA.8.2.9 edit and revise to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.8.2.10 conduct research using parts of a book to gather, evaluate and synthesize data from a variety of sources (e.g., print; non-print; people).
RLA.8.2.11 identify and use traditional reference sources for different types of information.
RLA.8.2.12 independently resolve information conflicts and validate information through assessing, researching and comparing data.
RLA.8.2.13 demonstrate the ability to identify the source, location, media type, relevancy and content validity of available information.
RLA.8.2.14 apply use of card catalog and/or computer databases to identify title, author, subject, call number, publisher and copyright resources to gather information for a presentation.
RLA.8.2.15 use an outline to develop a written and/or oral presentation using graphic representation.

Performance Descriptors (RLA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at the distinguished level write an elaborate composition with a concise thesis statement demonstrating command of grammatical/mechanical conventions, vivid word terminology and sophisticated transitional elements to enhance meaning. Students integrate relevant, valid information in a research-based presentation.
- **Mastery**
  Eighth grade students performing at the mastery level write a composition including a thesis statement designed for a specific audience. Students apply grade level grammatical/mechanical conventions, correct word terminology and smooth transition. Students identify information that is relevant and valid for a research-based presentation.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level write a composition with evidence of grammatical/mechanical conventions, correct word terminology, transition and use of relevant information in a simple research-based presentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.8.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; speaking etiquette; audience etiquette).

RLA.8.3.2 present an oral report with graphic aids (e.g., tables; graphs; diagrams; charts).

RLA.8.3.3 think critically about oral/visual information presented; relate personal experiences and apply the information to global situations.

RLA.8.3.4 listen in order to analyze and critique information received in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).

RLA.8.3.5 play a variety of roles in group discussions including active listener, discussion leader and/or facilitator.

RLA.8.3.6 properly use private and public information.

Performance Descriptors (RLA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at the distinguished level plan, design and deliver an enhanced oral/visual presentation justifying their opinions on global situations. Students evaluate sources and the use of public/private information, and apply communication skills required for various careers.
- **Mastery**
  Eighth grade students performing at the mastery level plan, design and deliver an effective oral presentation. Students relate personal experiences to oral/visual information, distinguish between public and private information and identify communication skills required for various careers.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level deliver oral presentations, communicate personal experiences, locate information and investigate communication skills required for various careers.

Ninth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts ninth grade students will focus on the effective use of written language in educational and occupational endeavors and interpersonal communications. Instructional delivery will be enhanced through a wide range of media. Frequent interaction with a broad array of quality literature will encourage an appreciation for the power of the written and spoken word. All language arts skills and strategies will be utilized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.9.1.1 identify historical, cultural and biographical influences of literary works.
RLA.9.1.2 recognize literary styles according to genre.
RLA.9.1.3 increase the amount of independent reading with emphasis on fiction and nonfiction.
RLA.9.1.4 develop various reading skills for literary experience, information and/or performing a task (e.g., skimming; scanning; note taking; SQ3R).
RLA.9.1.5 locate specific information in text (e.g., main and supporting ideas; specific facts; statistics; definition).
RLA.9.1.6 expand the use of various strategies to establish word meanings (e.g., context clues; affixes; multiple meanings).
RLA.9.1.7 recognize and explain the function of illustration within a specific text (e.g., pictures; artwork; graphic organizers such as maps - charts - lists - graphs).
RLA.9.1.8 recognize literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.9.1.9 identify literary elements within specific genre (e.g., point of view; theme; conflict; characterization; voice).
RLA.9.1.10 recognize the elements, structures and tone of various genres (e.g., novels; short stories; poetry; drama).

Performance Descriptors (RLA.PD.9.1)

- **Distinguished**
  Ninth grade students performing at the distinguished level read, analyze and evaluate advanced level texts to draw supportable conclusions about historical, cultural and biographical influences on literary works. Students analyze and evaluate literary devices and elements, author's voice and modes of characterization.
- **Mastery**
  Ninth grade students performing at the mastery level read, analyze and synthesize grade level texts to explain historical, cultural and biographical influences on literary works. Students explain literary devices and elements, author's voice and modes of characterization.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level read grade level texts to identify historical, cultural, and biographical influences on literary works. Students recognize basic literary devices and elements.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.9.2.1	address specific purposes (e.g., narrative; expository; descriptive; persuasive) by employing writing strategies.
RLA.9.2.2	generate topics and plan approaches to writing by using pre-writing strategies.
RLA.9.2.3	employ drafting strategies for specific writing tasks.
RLA.9.2.4	create a well-developed composition from a prompt.
RLA.9.2.5	develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement.
RLA.9.2.6	develop a composition that is focused and coherent and has a clear, logical progression of ideas (e.g., spatial order in a descriptive essay; chronological order in a process essay).
RLA.9.2.7	use different transitional devices (e.g., introductory and transitional phrases/conjunctions) between paragraphs.
RLA.9.2.8	develop a composition that uses complete and varied sentences.
RLA.9.2.9	develop a composition with appropriate and precise word choice.
RLA.9.2.10	use revision and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.9.2.11	access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog, electronic media).
RLA.9.2.12	extend note-taking skills to process and organize information.
RLA.9.2.13	recognize the concept of intellectual property and plagiarism (e.g., media copyright laws; public/private domain).
RLA.9.2.14	develop outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.9.2.15	practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.9.2.16	recognize choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.9.2.17	recognize the parts of speech within a sentence.
RLA.9.2.18	recognize the various parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive).
RLA.9.2.19	identify editing strategies to correct errors in capitalization and punctuation.
RLA.9.2.20	recognize and correct errors in subject/verb agreement.
RLA.9.2.21	recognize and correct errors in pronoun case usage and pronoun/antecedent agreement.
RLA.9.2.22	recognize and correct run-on sentences, fragments, misplaced modifiers and awkward constructions.
RLA.9.2.23	form supportable predictions, opinions, inferences and conclusions based upon text.
RLA.9.2.24	expand vocabulary through various literary works.
RLA.9.2.25	identify word etymologies to determine meaning.

Performance Descriptors (RLA.PD.9.2)

- **Distinguished**
  Ninth grade students performing at the distinguished level write compositions that contain a refined thesis statement, subtle transition, elevated diction and pertinent sentence structure germane to the writing. Students independently apply the rules of intellectual property.
- **Mastery**
  Ninth grade students performing at the mastery level write diverse compositions that integrate a clear and logical thesis statement, transitional devices, precise diction, varied sentence structure and a clear, logical progression of supported ideas. Students extend research skills by applying the rules of intellectual property to compositions.

- **Partial Mastery**
  Ninth grade students performing at the partial mastery level write compositions that show evidence of a thesis statement, basic transition, limited diction, complete sentences and a progression of ideas. Students identify and explain the rules of intellectual property.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.9.3.1 understand, communicate and follow complex directions effectively.
RLA.9.3.2 review appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in the appropriate tone and at the appropriate time).
RLA.9.3.3 review listening behaviors prior to a school wide audience activity (e.g., staying alert; resisting distractions; identifying and adapting to the speaker's purpose).
RLA.9.3.4 listen to identify the purpose, make predictions, distinguish fact from opinion and construct meaning from discussion, speech or media.
RLA.9.3.5 recognize and correct usage errors in oral language.

Performance Descriptors (RLA.PD.9.3)

- **Distinguished**
  Ninth grade students performing at the distinguished level effectively design and communicate intricate directions. Students synthesize meaning from discussion, speech and media to communicate supportable opinions.
- **Mastery**
  Ninth grade students performing at the mastery level effectively communicate complex directions. Students construct meaning from discussion, speech and media through observation and participation.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level effectively communicate simple directions. Students determine meaning from discussion, speech and media through observation and/or participation.

Tenth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts tenth grade students will use written language for educational, occupational and personal endeavors. Preparation will include critiquing oral presentations and using listening, speaking and viewing while reading and writing. Instructional delivery will be enhanced by a wide variety of media. Frequent interaction with a broadened array of literature will encourage an increased appreciation and understanding for the power of the spoken and written word across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.10.1.1 analyze and research historical, cultural and biographical influences of literary works.
RLA.10.1.2 compare and contrast literary styles according to genre.
RLA.10.1.3 increase the amount of independent reading with emphasis on American, British and World literature.
RLA.10.1.4 employ reading strategies necessary for various reading purposes (e.g., literary experience; information; and task performance).
RLA.10.1.5 continue to use context clues to establish word meaning (e.g., including words with multiple meanings).
RLA.10.1.6 recognize characteristics of author's style, purpose and tone.
RLA.10.1.7 form supportable predictions, opinions, inferences and conclusions based upon a text and/or implicit ideas.
RLA.10.1.8 explain the author's choice of literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.10.1.9 recognize persuasive language and techniques (e.g., advertisements; junk mail; news stories).
RLA.10.1.10 expand vocabulary through classic literature.
RLA.10.1.11 explain word etymologies to determine meaning.

Performance Descriptors (RLA.PD.10.1)

- **Distinguished**
  Tenth grade students performing at the distinguished level read, synthesize and evaluate advanced level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works. Students examine the universality of literature to determine the interrelationship among literary works.
- **Mastery**
  Tenth grade students performing at the mastery level read and analyze grade level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery read grade level texts to form predictions, opinions, inferences and conclusions. Students identify and explain the impact of historical, cultural, and biographical factors on literary works.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.10.2.1 employ writing strategies to address specific audiences (e.g., narrative; expository; descriptive; persuasive).
RLA.10.2.2 use pre-writing strategies to generate topics and plan approaches to writing by using timed writing tasks.

RLA.10.2.3 from a writing prompt, create a well-developed composition illustrating various points of view (e.g., omniscient or limited).
RLA.10.2.4 develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement which is supported by relevant details.
RLA.10.2.5 develop a timed writing that is focused and coherent and has a clear, logical progression of ideas.
RLA.10.2.6 use different transitional devices (e.g., introductory and internal transitional phrases/conjunctions).
RLA.10.2.7 develop a composition that contains sentence variety.
RLA.10.2.8 develop a composition where word choice is vivid, precise and economical.
RLA.10.2.9 correct errors in timed writing to correct errors in organization, content, usage, mechanics (e.g., capitalization; punctuation) and spelling using revision and editing strategies.
RLA.10.2.10 access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog; electronic media; newspapers).
RLA.10.2.11 extend note-taking skills to process and organize information (e.g., paraphrase; summary; quote).
RLA.10.2.12 explain the concept of intellectual property and plagiarism in all media (e.g., media copyright laws; public/private domain).
RLA.10.2.13 expand outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.10.2.14 practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.10.2.15 explain word etymologies to determine meaning.
RLA.10.2.16 compare and contrast choice of pronunciation and spelling (e.g. dictionary; spell check; thesaurus).
RLA.10.2.17 classify the parts of speech within a sentence.
RLA.10.2.18 recognize the parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive; word usage variations).
RLA.10.2.19 recognize and correct errors in subject/verb agreement with emphasis on indefinite pronouns.
RLA.10.2.20 use correct verb tense by recognizing appropriate situations for tense shifts.
RLA.10.2.21 recognize and correct errors in sentence structure (e.g., parallelism; redundancy; misplaced modifiers; subordination).

Performance Descriptors (RLA.PD.10.2)

- **Distinguished**
  Tenth grade students performing at the distinguished level write focused compositions that exhibit a well-discerned and placed thesis statement, sophisticated diction and insightful detail. Students experiment with point of view leading to the development of a personal voice. Students extend research skills by incorporating information into compositions using correct documentation.
- **Mastery**
  Tenth grade students performing at the mastery level write focused compositions. Students integrate a correctly placed thesis statement, vivid and economical diction, specific, relevant details and various points of view. Students extend research skills incorporating information into compositions using correct documentation.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery write basic compositions with limited focus. Students incorporate a thesis statement, simplistic diction, sporadic detail and a shifting point of view. Students extend research skills by transferring information into compositions using documentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.10.3.1 communicate and follow intricate directions.
RLA.10.3.2 employ appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in appropriate tone and at the appropriate time).

RLA.10.3.3 listen to a speech (e.g., funeral orations from Shakespeare's *Julius Caesar*) to identify specific examples of central idea, fact versus opinion and persuasive devices.

RLA.10.3.4 recognize and correct usage errors in oral language (e.g., distinguishing colloquial - dialectical - slang - formal versus informal).

RLA.10.3.5 practice and master listening, speaking and viewing by using a variety of techniques (e.g., videos, power point presentations; audiotape; web pages).

Performance Descriptors (RLA.PD.10.3)

- **Distinguished**
  Tenth grade students performing at the distinguished level automatically evaluate and apply conventions of oral language. Students assess the merit of persuasive devices from multiple sources to determine and debate credibility.
- **Mastery**
  Tenth grade students performing at the mastery level recognize and apply conventions of oral language by distinguishing colloquial, dialectical, slang and formal language. Students construct meaning from multiple sources by analyzing persuasive devices to determine credibility.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery level recognize conventions of oral language. Students determine basic meaning from multiple sources by identifying and paraphrasing persuasive language.

Eleventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eleventh grade students will refine and enhance foundational literary and communication skills through academic rigor and depth. Career formalization, including college entrance exam preparation and workplace readiness skills, will become a primary focus. Challenging research and writing skills will be emphasized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.11.1.1 research, analyze and evaluate the historical, cultural and biographical influences of literary works.

RLA.11.1.2 analyze literary styles according to genre.

RLA.11.1.3 increase the amount of independent reading with emphasis on classic American, British and World literature.

RLA.11.1.4 select appropriate reading strategies necessary for various reading purposes (e.g., literary experience; information; task performance).

RLA.11.1.5 analyze characteristics of author's style, purpose and technique from a variety of selections (e.g., critical review; literary/character analysis).

RLA.11.1.6 draw supportable conclusions, make inferences and generalizations, and interpret character traits.

RLA.11.1.7 expand vocabulary through various literary works and apply word etymologies to determine meaning.
RLA.11.1.8 recognize and interpret various literary devices, in particular, figurative language (e.g., personification; archetypes; allegorical patterns).
RLA.11.1.9 analyze types of texts according to content, structure and tone.
RLA.11.1.10 read literary criticism applicable to the genre being studied.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:
RLA.11.2.1 employ writing strategies to address specific purposes and audiences (e.g., narrative; expository; descriptive and/or persuasive).
RLA.11.2.2 generate topics and plan approaches to writing (e.g., graphic organizers; outlines) using pre-writing strategies.
RLA.11.2.3 employ drafting strategies for interdisciplinary writing tasks.
RLA.11.2.4 develop a composition from a student-generated clearly worded and correctly placed thesis statement which is supported by relevant details.
RLA.11.2.5 develop a composition that is focused and coherent and has a clear, logical progression of ideas.
RLA.11.2.6 use vocabulary that is vivid, precise and economical.
RLA.11.2.7 identify and use subtle forms of transition in a composition (e.g., sentence links; repetition of key words or sentences).
RLA.11.2.8 identify rhetorical devices (e.g., parallel structure; antithesis; narrative pace).
RLA.11.2.9 produce functional writing (e.g., letter of job application; scholarship application; essay; personal letter).
RLA.11.2.10 produce a researched essay or project following an accepted format (e.g., MLA; APA).
RLA.11.2.11 find and develop personal style and voice in writing.
RLA.11.2.12 in functional and research writing, use revisions and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.11.2.13 access and evaluate information through a variety of sources (e.g., *Reader's Guide*; card catalog; electronic media).
RLA.11.2.14 extend efficient note taking skills with careful attention to identifying purpose, main ideas/key facts and overall themes in order to synthesize information into a well-developed essay.
RLA.11.2.15 apply the concept of intellectual property and plagiarism in all media (e.g., media copyright laws; private/public domain).
RLA.11.2.16 produce a suitable outline for use in a researched essay or project.
RLA.11.2.17 apply choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.11.2.18 analyze the parts of a sentence (e.g., direct object; predicate adjective, gerund; infinitive; word usage variations).
RLA.11.2.19 select appropriate editing strategies to correct errors in punctuation.
RLA.11.2.20 recognize and correct errors in subject verb agreement and verb tense.
RLA.11.2.21 recognize and correct errors in sentence structure and usage (e.g., parallelism; redundancy; misplaced modifiers; subordination).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.6.1.1 know the defining characteristics, build background knowledge and use reading skills to understand a variety of West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.6.1.2 increase amount of independent reading.
RLA.6.1.3 determine theme and locate supporting details in a literary passage and across the curriculum.
RLA.6.1.4 analyze text to determine transitional words/language.
RLA.6.1.5 use comprehension skills (e.g., draw conclusions; interpret meaning).
RLA.6.1.6 determine the elements of literature (e.g. external conflict; mood) to construct meaning and recognize author's and/or reader's purpose.
RLA.6.1.7 identify figurative language in text (e.g., simile; metaphor; personification).
RLA.6.1.8 explain text connections to self, to other text and to the world for understanding a literary passage.
RLA.6.1.9 identify and classify types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quantrain).
RLA.6.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.6.1.11 use connotation and denotation to understand meaning.
RLA.6.1.12 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.6.1.13 spell commonly misspelled words, easily confused words and words with irregular endings across the curriculum.

Performance Descriptors (RLA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students identify and classify literary types, draw and justify conclusions and opinions, explain inferences and interpret author's purpose.
- **Mastery**
  Sixth grade students performing at the mastery level read independently grade level literary types, draw and justify conclusions and summarize grade level passage.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read grade level materials to recognize literary types, draw conclusions and develop a simple summary.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.6.2.1	use pre-writing and drafting strategies (e.g., drawing; clustering; brainstorming; discussion) to generate topics and plan approaches to writing tasks.
RLA.6.2.2	from a prompt, use the writing process to develop a composition that contains specific, relevant details and transitions.
RLA.6.2.3	use writing strategies to address specific writing purposes (e.g., creative; journalistic; essay; narrative; informative; persuasive) and address various audiences (e.g., peers; teachers; employers).
RLA.6.2.4	edit own writing as well as the writing of others to correct errors in organization, content, usage, mechanics and spelling.
RLA.6.2.5	demonstrate mastery of a 3-5 paragraph composition.
RLA.6.2.6	apply capitalization rules (e.g., proper adjectives; names of written works; family relationships; nationalities; religions/religious terms).
RLA.6.2.7	apply punctuation rules (e.g., commas; apostrophes in contractions and possessives both singular and plural; colons; semicolons; quotation marks; hyphens).
RLA.6.2.8	write and punctuate simple and compound sentences with conjunctions, interjections and prepositions.
RLA.6.2.9	identify and use correct pronoun case.
RLA.6.2.10	identify action, helping and linking verbs while correctly using verb tense and subject/verb agreement in simple and compound sentences.
RLA.6.2.11	use adjectives and adverbs in comparative and superlative forms.
RLA.6.2.12	compose sentences that contain compound subjects and compound verbs.
RLA.6.2.13	organize information by combining predicates, modifiers, phrases and/or clauses and sentences.
RLA.6.2.14	identify and correct run-on sentences, sentence fragments and redundant words/sentences.
RLA.6.2.15	use the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.6.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; atlas; almanac, encyclopedia; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms; audiovisual resources).
RLA.6.2.17	begin to demonstrate the ability to identify the source, location, media type, relevancy and content validity of available resource information.
RLA.6.2.18	identify title, author, subject, call number, publisher and copyright of resources using the card catalog, either hard copy or computer database.
RLA.6.2.19	use traditional organizers to create, read, interpret and organize information in the form of tables, graphs, diagrams and charts.
RLA.6.2.20	organize information into an outline by being able to categorize information into topic, subtopic and detail.
RLA.6.2.21	identify and use correct note taking skills.

Performance Descriptors (RLA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at the distinguished level write an effective and elaborate multiple paragraph composition correct in form and language. Students independently construct and organize research notes from print and non-print sources.
- **Mastery**
  Sixth grade students performing at the mastery level write a three to five paragraph composition employing grade level grammatical/mechanical conventions. Students apply note-taking skills to organize research data into an outline or graphic representation.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level write a basic composition with a beginning, middle and end demonstrating grade level command of grammatical and mechanical conventions. Students use fundamental note-taking skills to organize information into a basic format.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.6.3.1 recognize and exhibit oral communication skills (e.g. volume; rate; audience etiquette).
RLA.6.3.2 retell simple and detailed stories sequentially.
RLA.6.3.3 listen in order to comprehend topic and purpose (e.g. of a guest speaker; informational video; televised interview; radio news program).
RLA.6.3.4 reach consensus in group discussions or settings.

Performance Descriptors (RLA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes, commanding audience attention. Students' fluent oral reading exhibits accurate pitch, tone, rate and volume.
- **Mastery**
  Sixth grade students performing at the mastery level communicate with a peer audience for different purposes. Students demonstrate receptive audience behavior and identify components of presentations. Students read orally exhibiting elements of pitch, tone, rate and volume.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level communicate in small group situations. Students demonstrate receptive audience behavior. Students read orally in small groups.

Seventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts seventh grade students will continue to build, expand and refine prior learning. Instruction in rigorous listening, speaking and viewing skills will assist in preparing students to interact and express themselves among peers, at home and in the community. Reading comprehension and vocabulary will develop through the use of a wide variety of literary genres and strategies. Writing will utilize error-free and content-rich communication in gathering, organizing, interpreting and reporting information gained through reading. The student will be exposed to these objectives not only in the language arts but across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.7.1.1 classify the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.7.1.2 increase amount of independent reading.

RLA.7.1.3 relate common themes across a variety of literature.

RLA.7.1.4 use comprehension strategies (e.g., generalize; evaluate; infer; paraphrase).

RLA.7.1.5 determine the elements of literature (e.g., internal conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.7.1.6 identify figurative language in text (e.g., jargon; idioms).

RLA.7.1.7 make text connections to self, to other text and to the real world.

RLA.7.1.8 identify literary techniques used to interpret literature (e.g., flashback; stereotype; foreshadowing; propaganda).

RLA.7.1.9 read types of poetry and the use of inversion, rhyme and rhythm in narrative poems, ballads and lyrics.

RLA.7.1.10 recognize and understand clipped or shortened words and their meaning. (e.g., bio for biography; auto for automobile).

RLA.7.1.11 compare/contrast connotation and denotation to understand and enhance meaning of words, sentences and passages.

RLA.7.1.12 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.

RLA.7.1.13 use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level read both functional and recreational materials above grade level. Students classify literary types, support inferences and paraphrase selections making connections to other texts and global situations.
- **Mastery**
  Seventh grade students performing at the mastery level read independently grade level materials to classify literary types, explain inferences and paraphrase long selections.
- **Partial Mastery**
  Seventh grade students performing a the partial mastery level read grade level materials to recognize literary types. Students use simple summarizing and paraphrasing in a simple passage.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.7.2.1 from a prompt, use the writing process to develop a focused composition that contains specific, relevant details and transition.

RLA.7.2.2 use editing and revision techniques to vary sentence length, change sentence order, use vivid and concise words and eliminate organizational errors.

RLA.7.2.3 use the writing process to compose various types of writing (e.g., creative; informative; expository; persuasive; articles; essays; journals; letters; poetry; research/reports).

RLA.7.2.4 apply capitalization rules (e.g., languages; school subjects; regions of the U.S.; dialogue; lines of poetry).
RLA.7.2.5 apply punctuation rules (e.g., commas; apostrophes in possessives and contractions; colons; semicolons; hyphens; dashes; parentheses).
RLA.7.2.6 use pronouns, pronoun cases and antecedents in correct form.
RLA.7.2.7 use and apply correct forms of adjectives and adverbs and/or complex sentence.
RLA.7.2.8 recognize and avoid use of double negatives.
RLA.7.2.9 compose and punctuate simple, compound and complex sentences with and without conjunctions.
RLA.7.2.10 organize information by combining subjects, predicates, modifiers and appositives in a sentence.
RLA.7.2.11 use correct verb tense and subject verb agreement (e.g., irregular verbs; compound subjects; indefinite pronouns; intervening phrases).
RLA.7.2.12 edit to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.7.2.13 use title page, copyright page, table of contents, appendix, bibliography, glossary and index to locate specified information.
RLA.7.2.14 identify and use traditional reference sources for different types of information (e.g., *Reader's Guide; Books In Print;* newspapers; schedules; advertisements; audiovisual resources).
RLA.7.2.15 recognize copyright laws/issues, ethical acquisition and use of digital information in citing sources for research/report.
RLA.7.2.16 identify the source, location, media type, relevancy and content validity of available information.
RLA.7.2.17 demonstrate the ability to use the card catalog in hard copy or database to identify title, author, subject, call number, publisher and copyright resources.
RLA.7.2.18 develop an outline using prepared notes to write a paragraph.

Performance Descriptors (RLA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at the distinguished level write an elaborate composition from a prompt that is well-crafted, cohesively organized and employs sophisticated transitional elements. Students construct a detailed outline to produce a research-based report.
- **Mastery**
  Seventh grade students performing at the mastery level write a focused composition from a prompt with grade level grammatical/mechanical conventions; sentence variety, supporting details and clear transition. Students develop an outline from research notes to produce a paragraph.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level write a composition form a prompt with limited grammatical/mechanical conventions; complete sentences, basic details and evidence of transition. Students produce a simple outline from notes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.7.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; audience etiquette).
RLA.7.3.2 perform dramatizations.
RLA.7.3.3 use oral/visual information to foster exploration, questioning and imagining of a topic.
RLA.7.3.4 listen in order to comprehend topic, purpose and perspective in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.7.3.5 play a variety of roles in group discussions including active listener and discussion leader.
RLA.7.3.6 distinguish between private and public information in research and reporting.

Performance Descriptors (RLA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at the distinguished level communicate effectively with a variety of audiences for different purposes. Students deliver an expressive oral presentation exhibiting effective communication skills. Students respond critically to oral and visual information to oral and visual information by exploring and questioning the topic.
- **Mastery**
  Seventh grade students performing at the mastery level communicate with an audience for different purposes. Students deliver an oral presentation exhibiting communication skills by using a prepared script. Students respond to oral and visual information by exploring and questioning the topic.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level communicate with a small group for a specific purpose. Students deliver an oral presentation by reading from a prepared script. Students respond to oral and visual information by summarizing the topic.

Eighth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eighth grade students will develop strategies that support understanding language in real life situations. Writing will focus on audience, stressing mechanics, language expression and organization of ideas. Reading comprehension and vocabulary will stress development of reading and thinking skills that enable students to comprehend and react critically to various genres of regional, national and international works. The student will utilize language arts skills across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.8.1.1 analyze the defining characteristics, build background knowledge and apply reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myths; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).

RLA.8.1.2 relate literary theme to global situations.

RLA.8.1.3 use comprehension strategies (e.g., make judgments; hypothesize; critique; analyze).

RLA.8.1.4 determine the elements of literature (e.g., internal/external conflict; point of view) to construct meaning and recognize author's and/or reader's purpose.

RLA.8.1.5 identify figurative language in text (e.g., onomatopoeia; pun).

RLA.8.1.6 make text connections to self, to other text and to the real world.

RLA.8.1.7 identify literary technique used to interpret literature (e.g., irony; satire; persuasive language; analogies).

RLA.8.1.8 read and identify types of poetry and the use of inversion, rhyme and rhythm (e.g., narrative poem; ballad; lyric; epic).
RLA.8.1.9 recognize and understand acronyms.
RLA.8.1.10 use resource materials (e.g., dictionary; glossary; thesaurus) to determine the meaning of unknown words or multiple meaning words.
RLA.8.1.11 use root words, prefixes, and suffixes to spell words, change word meanings and generate new words appropriate to grade level.

Performance Descriptors (RLA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level read both functional and recreational materials above grade level. Students extend multiple text information by making and supporting judgments, hypothesizing, critiquing and analyzing abstract themes.
- **Mastery**
  Eighth grade students performing at the mastery level read independently and analyze grade level literary genres, make and support judgments and hypothesize to connect reader's response with author's purpose.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level read grade level materials to classify literary types, explain inferences and make judgments, demonstrate literal knowledge of text and relate text to personal experience.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.8.2.1 use the writing process to demonstrate the ability to compose a variety of written work (e.g., creative; informative; expository; persuasive; chronological explanatory; compare/contrast; cause/effect; article; essay; journal; letters; reports; poetry).
RLA.8.2.2 from a prompt, develop a focused composition that contains specific, relevant details, smooth transition and vivid, precise words.
RLA.8.2.3 use revision and editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.8.2.4 recognize and write a simple thesis statement.
RLA.8.2.5 apply all capitalization rules in writing.
RLA.8.2.6 apply punctuation rules in writing (e.g., appositives; phrases; clauses).
RLA.8.2.7 compose and punctuate grammatically correct simple, compound and complex sentences.
RLA.8.2.8 identify and correct faulty parallel sentence structure such as phrases and clauses.
RLA.8.2.9 edit and revise to eliminate run-on sentences, sentence fragments, redundant words/sentences and misplaced modifiers.
RLA.8.2.10 conduct research using parts of a book to gather, evaluate and synthesize data from a variety of sources (e.g., print; non-print; people).
RLA.8.2.11 identify and use traditional reference sources for different types of information.
RLA.8.2.12 independently resolve information conflicts and validate information through assessing, researching and comparing data.
RLA.8.2.13 demonstrate the ability to identify the source, location, media type, relevancy and content validity of available information.
RLA.8.2.14 apply use of card catalog and/or computer databases to identify title, author, subject, call number, publisher and copyright resources to gather information for a presentation.
RLA.8.2.15 use an outline to develop a written and/or oral presentation using graphic representation.

Performance Descriptors (RLA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at the distinguished level write an elaborate composition with a concise thesis statement demonstrating command of grammatical/mechanical conventions, vivid word terminology and sophisticated transitional elements to enhance meaning. Students integrate relevant, valid information in a research-based presentation.
- **Mastery**
  Eighth grade students performing at the mastery level write a composition including a thesis statement designed for a specific audience. Students apply grade level grammatical/mechanical conventions, correct word terminology and smooth transition. Students identify information that is relevant and valid for a research-based presentation.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level write a composition with evidence of grammatical/mechanical conventions, correct word terminology, transition and use of relevant information in a simple research-based presentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.8.3.1 recognize and exhibit oral communication skills (e.g., tone; volume; rate; speaking etiquette; audience etiquette).

RLA.8.3.2 present an oral report with graphic aids (e.g., tables; graphs; diagrams; charts).

RLA.8.3.3 think critically about oral/visual information presented; relate personal experiences and apply the information to global situations.

RLA.8.3.4 listen in order to analyze and critique information received in spoken texts (e.g., of a guest speaker; informational video; televised interview; radio news program).

RLA.8.3.5 play a variety of roles in group discussions including active listener, discussion leader and/or facilitator.

RLA.8.3.6 properly use private and public information.

Performance Descriptors (RLA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at the distinguished level plan, design and deliver an enhanced oral/visual presentation justifying their opinions on global situations. Students evaluate sources and the use of public/private information, and apply communication skills required for various careers.
- **Mastery**
  Eighth grade students performing at the mastery level plan, design and deliver an effective oral presentation. Students relate personal experiences to oral/visual information, distinguish between public and private information and identify communication skills required for various careers.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level deliver oral presentations, communicate personal experiences, locate information and investigate communication skills required for various careers.

Ninth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts ninth grade students will focus on the effective use of written language in educational and occupational endeavors and interpersonal communications. Instructional delivery will be enhanced through a wide range of media. Frequent interaction with a broad array of quality literature will encourage an appreciation for the power of the written and spoken word. All language arts skills and strategies will be utilized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.9.1.1 identify historical, cultural and biographical influences of literary works.
RLA.9.1.2 recognize literary styles according to genre.
RLA.9.1.3 increase the amount of independent reading with emphasis on fiction and nonfiction.
RLA.9.1.4 develop various reading skills for literary experience, information and/or performing a task (e.g., skimming; scanning; note taking; SQ3R).
RLA.9.1.5 locate specific information in text (e.g., main and supporting ideas; specific facts; statistics; definition).
RLA.9.1.6 expand the use of various strategies to establish word meanings (e.g., context clues; affixes; multiple meanings).
RLA.9.1.7 recognize and explain the function of illustration within a specific text (e.g., pictures; artwork; graphic organizers such as maps - charts - lists - graphs).
RLA.9.1.8 recognize literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.9.1.9 identify literary elements within specific genre (e.g., point of view; theme; conflict; characterization; voice).
RLA.9.1.10 recognize the elements, structures and tone of various genres (e.g., novels; short stories; poetry; drama).

Performance Descriptors (RLA.PD.9.1)

- **Distinguished**
  Ninth grade students performing at the distinguished level read, analyze and evaluate advanced level texts to draw supportable conclusions about historical, cultural and biographical influences on literary works. Students analyze and evaluate literary devices and elements, author's voice and modes of characterization.
- **Mastery**
  Ninth grade students performing at the mastery level read, analyze and synthesize grade level texts to explain historical, cultural and biographical influences on literary works. Students explain literary devices and elements, author's voice and modes of characterization.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level read grade level texts to identify historical, cultural, and biographical influences on literary works. Students recognize basic literary devices and elements.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.9.2.1	address specific purposes (e.g., narrative; expository; descriptive; persuasive) by employing writing strategies.
RLA.9.2.2	generate topics and plan approaches to writing by using pre-writing strategies.
RLA.9.2.3	employ drafting strategies for specific writing tasks.
RLA.9.2.4	create a well-developed composition from a prompt.
RLA.9.2.5	develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement.
RLA.9.2.6	develop a composition that is focused and coherent and has a clear, logical progression of ideas (e.g., spatial order in a descriptive essay; chronological order in a process essay).
RLA.9.2.7	use different transitional devices (e.g., introductory and transitional phrases/conjunctions) between paragraphs.
RLA.9.2.8	develop a composition that uses complete and varied sentences.
RLA.9.2.9	develop a composition with appropriate and precise word choice.
RLA.9.2.10	use revision and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.9.2.11	access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog, electronic media).
RLA.9.2.12	extend note-taking skills to process and organize information.
RLA.9.2.13	recognize the concept of intellectual property and plagiarism (e.g., media copyright laws; public/private domain).
RLA.9.2.14	develop outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.9.2.15	practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.9.2.16	recognize choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.9.2.17	recognize the parts of speech within a sentence.
RLA.9.2.18	recognize the various parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive).
RLA.9.2.19	identify editing strategies to correct errors in capitalization and punctuation.
RLA.9.2.20	recognize and correct errors in subject/verb agreement.
RLA.9.2.21	recognize and correct errors in pronoun case usage and pronoun/antecedent agreement.
RLA.9.2.22	recognize and correct run-on sentences, fragments, misplaced modifiers and awkward constructions.
RLA.9.2.23	form supportable predictions, opinions, inferences and conclusions based upon text.
RLA.9.2.24	expand vocabulary through various literary works.
RLA.9.2.25	identify word etymologies to determine meaning.

Performance Descriptors (RLA.PD.9.2)

- **Distinguished**
  Ninth grade students performing at the distinguished level write compositions that contain a refined thesis statement, subtle transition, elevated diction and pertinent sentence structure germane to the writing. Students independently apply the rules of intellectual property.
- **Mastery**
  Ninth grade students performing at the mastery level write diverse compositions that integrate a clear and logical thesis statement, transitional devices, precise diction, varied sentence structure and a clear, logical progression of supported ideas. Students extend research skills by applying the rules of intellectual property to compositions.

- **Partial Mastery**
  Ninth grade students performing at the partial mastery level write compositions that show evidence of a thesis statement, basic transition, limited diction, complete sentences and a progression of ideas. Students identify and explain the rules of intellectual property.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.9.3.1 understand, communicate and follow complex directions effectively.
RLA.9.3.2 review appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in the appropriate tone and at the appropriate time).
RLA.9.3.3 review listening behaviors prior to a school wide audience activity (e.g., staying alert; resisting distractions; identifying and adapting to the speaker's purpose).
RLA.9.3.4 listen to identify the purpose, make predictions, distinguish fact from opinion and construct meaning from discussion, speech or media.
RLA.9.3.5 recognize and correct usage errors in oral language.

Performance Descriptors (RLA.PD.9.3)

- **Distinguished**
  Ninth grade students performing at the distinguished level effectively design and communicate intricate directions. Students synthesize meaning from discussion, speech and media to communicate supportable opinions.
- **Mastery**
  Ninth grade students performing at the mastery level effectively communicate complex directions. Students construct meaning from discussion, speech and media through observation and participation.
- **Partial Mastery**
  Ninth grade students performing at the partial mastery level effectively communicate simple directions. Students determine meaning from discussion, speech and media through observation and/or participation.

Tenth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts tenth grade students will use written language for educational, occupational and personal endeavors. Preparation will include critiquing oral presentations and using listening, speaking and viewing while reading and writing. Instructional delivery will be enhanced by a wide variety of media. Frequent interaction with a broadened array of literature will encourage an increased appreciation and understanding for the power of the spoken and written word across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.10.1.1 analyze and research historical, cultural and biographical influences of literary works.
RLA.10.1.2 compare and contrast literary styles according to genre.
RLA.10.1.3 increase the amount of independent reading with emphasis on American, British and World literature.
RLA.10.1.4 employ reading strategies necessary for various reading purposes (e.g., literary experience; information; and task performance).
RLA.10.1.5 continue to use context clues to establish word meaning (e.g., including words with multiple meanings).
RLA.10.1.6 recognize characteristics of author's style, purpose and tone.
RLA.10.1.7 form supportable predictions, opinions, inferences and conclusions based upon a text and/or implicit ideas.
RLA.10.1.8 explain the author's choice of literary devices (e.g., personification; symbolism; imagery; metaphor; simile; humor; rhythm; rhyme; meter; alliteration; assonance).
RLA.10.1.9 recognize persuasive language and techniques (e.g., advertisements; junk mail; news stories).
RLA.10.1.10 expand vocabulary through classic literature.
RLA.10.1.11 explain word etymologies to determine meaning.

Performance Descriptors (RLA.PD.10.1)

- **Distinguished**
  Tenth grade students performing at the distinguished level read, synthesize and evaluate advanced level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works. Students examine the universality of literature to determine the interrelationship among literary works.
- **Mastery**
  Tenth grade students performing at the mastery level read and analyze grade level texts to form supportable predictions, opinions, inferences and conclusions from implicit ideas. Students research and analyze the impact of historical, cultural and biographical factors on literary works.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery read grade level texts to form predictions, opinions, inferences and conclusions. Students identify and explain the impact of historical, cultural, and biographical factors on literary works.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.10.2.1 employ writing strategies to address specific audiences (e.g., narrative; expository; descriptive; persuasive).
RLA.10.2.2 use pre-writing strategies to generate topics and plan approaches to writing by using timed writing tasks.

RLA.10.2.3 from a writing prompt, create a well-developed composition illustrating various points of view (e.g., omniscient or limited).
RLA.10.2.4 develop a composition that addresses the assigned topic with a clearly worded and correctly placed thesis statement which is supported by relevant details.
RLA.10.2.5 develop a timed writing that is focused and coherent and has a clear, logical progression of ideas.
RLA.10.2.6 use different transitional devices (e.g., introductory and internal transitional phrases/conjunctions).
RLA.10.2.7 develop a composition that contains sentence variety.
RLA.10.2.8 develop a composition where word choice is vivid, precise and economical.
RLA.10.2.9 correct errors in timed writing to correct errors in organization, content, usage, mechanics (e.g., capitalization; punctuation) and spelling using revision and editing strategies.
RLA.10.2.10 access and evaluate a variety of sources (e.g., *Reader's Guide*; card catalog; electronic media; newspapers).
RLA.10.2.11 extend note-taking skills to process and organize information (e.g., paraphrase; summary; quote).
RLA.10.2.12 explain the concept of intellectual property and plagiarism in all media (e.g., media copyright laws; public/private domain).
RLA.10.2.13 expand outlining skills to organize text and composition information by selecting main points and supporting details.
RLA.10.2.14 practice correct use of bibliographic format in research documentation (e.g., MLA; APA).
RLA.10.2.15 explain word etymologies to determine meaning.
RLA.10.2.16 compare and contrast choice of pronunciation and spelling (e.g. dictionary; spell check; thesaurus).
RLA.10.2.17 classify the parts of speech within a sentence.
RLA.10.2.18 recognize the parts of a sentence (e.g., direct object; predicate adjective; gerund; infinitive; word usage variations).
RLA.10.2.19 recognize and correct errors in subject/verb agreement with emphasis on indefinite pronouns.
RLA.10.2.20 use correct verb tense by recognizing appropriate situations for tense shifts.
RLA.10.2.21 recognize and correct errors in sentence structure (e.g., parallelism; redundancy; misplaced modifiers; subordination).

Performance Descriptors (RLA.PD.10.2)

- **Distinguished**
  Tenth grade students performing at the distinguished level write focused compositions that exhibit a well-discerned and placed thesis statement, sophisticated diction and insightful detail. Students experiment with point of view leading to the development of a personal voice. Students extend research skills by incorporating information into compositions using correct documentation.
- **Mastery**
  Tenth grade students performing at the mastery level write focused compositions. Students integrate a correctly placed thesis statement, vivid and economical diction, specific, relevant details and various points of view. Students extend research skills incorporating information into compositions using correct documentation.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery write basic compositions with limited focus. Students incorporate a thesis statement, simplistic diction, sporadic detail and a shifting point of view. Students extend research skills by transferring information into compositions using documentation.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.10.3.1 communicate and follow intricate directions.
RLA.10.3.2 employ appropriate classroom communication skills (e.g., asking and answering questions to foster comprehension and communication in appropriate tone and at the appropriate time).

RLA.10.3.3 listen to a speech (e.g., funeral orations from Shakespeare's *Julius Caesar*) to identify specific examples of central idea, fact versus opinion and persuasive devices.

RLA.10.3.4 recognize and correct usage errors in oral language (e.g., distinguishing colloquial - dialectical - slang - formal versus informal).

RLA.10.3.5 practice and master listening, speaking and viewing by using a variety of techniques (e.g., videos, power point presentations; audiotape; web pages).

Performance Descriptors (RLA.PD.10.3)

- **Distinguished**
  Tenth grade students performing at the distinguished level automatically evaluate and apply conventions of oral language. Students assess the merit of persuasive devices from multiple sources to determine and debate credibility.
- **Mastery**
  Tenth grade students performing at the mastery level recognize and apply conventions of oral language by distinguishing colloquial, dialectical, slang and formal language. Students construct meaning from multiple sources by analyzing persuasive devices to determine credibility.
- **Partial Mastery**
  Tenth grade students performing at the partial mastery level recognize conventions of oral language. Students determine basic meaning from multiple sources by identifying and paraphrasing persuasive language.

Eleventh Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts eleventh grade students will refine and enhance foundational literary and communication skills through academic rigor and depth. Career formalization, including college entrance exam preparation and workplace readiness skills, will become a primary focus. Challenging research and writing skills will be emphasized across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives

Students will:

RLA.11.1.1 research, analyze and evaluate the historical, cultural and biographical influences of literary works.

RLA.11.1.2 analyze literary styles according to genre.

RLA.11.1.3 increase the amount of independent reading with emphasis on classic American, British and World literature.

RLA.11.1.4 select appropriate reading strategies necessary for various reading purposes (e.g., literary experience; information; task performance).

RLA.11.1.5 analyze characteristics of author's style, purpose and technique from a variety of selections (e.g., critical review; literary/character analysis).

RLA.11.1.6 draw supportable conclusions, make inferences and generalizations, and interpret character traits.

RLA.11.1.7 expand vocabulary through various literary works and apply word etymologies to determine meaning.
RLA.11.1.8 recognize and interpret various literary devices, in particular, figurative language (e.g., personification; archetypes; allegorical patterns).
RLA.11.1.9 analyze types of texts according to content, structure and tone.
RLA.11.1.10 read literary criticism applicable to the genre being studied.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:
RLA.11.2.1 employ writing strategies to address specific purposes and audiences (e.g., narrative; expository; descriptive and/or persuasive).
RLA.11.2.2 generate topics and plan approaches to writing (e.g., graphic organizers; outlines) using pre-writing strategies.
RLA.11.2.3 employ drafting strategies for interdisciplinary writing tasks.
RLA.11.2.4 develop a composition from a student-generated clearly worded and correctly placed thesis statement which is supported by relevant details.
RLA.11.2.5 develop a composition that is focused and coherent and has a clear, logical progression of ideas.
RLA.11.2.6 use vocabulary that is vivid, precise and economical.
RLA.11.2.7 identify and use subtle forms of transition in a composition (e.g., sentence links; repetition of key words or sentences).
RLA.11.2.8 identify rhetorical devices (e.g., parallel structure; antithesis; narrative pace).
RLA.11.2.9 produce functional writing (e.g., letter of job application; scholarship application; essay; personal letter).
RLA.11.2.10 produce a researched essay or project following an accepted format (e.g., MLA; APA).
RLA.11.2.11 find and develop personal style and voice in writing.
RLA.11.2.12 in functional and research writing, use revisions and editing strategies to correct errors in organization, content, usage, mechanics and spelling.
RLA.11.2.13 access and evaluate information through a variety of sources (e.g., *Reader's Guide*; card catalog; electronic media).
RLA.11.2.14 extend efficient note taking skills with careful attention to identifying purpose, main ideas/key facts and overall themes in order to synthesize information into a well-developed essay.
RLA.11.2.15 apply the concept of intellectual property and plagiarism in all media (e.g., media copyright laws; private/public domain).
RLA.11.2.16 produce a suitable outline for use in a researched essay or project.
RLA.11.2.17 apply choices of pronunciation and spelling (e.g., dictionary; spell check; thesaurus).
RLA.11.2.18 analyze the parts of a sentence (e.g., direct object; predicate adjective, gerund; infinitive; word usage variations).
RLA.11.2.19 select appropriate editing strategies to correct errors in punctuation.
RLA.11.2.20 recognize and correct errors in subject verb agreement and verb tense.
RLA.11.2.21 recognize and correct errors in sentence structure and usage (e.g., parallelism; redundancy; misplaced modifiers; subordination).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.11.3.1 design and communicate complex directions.

RLA.11.3.2 continue to adapt/apply speaking skills in order to participate in a variety of situations (e.g., panel/group discussion; oral presentation).

RLA.11.3.3 correct usage errors in oral language (e.g., distinguishing colloquial - dialectical - slang - and formal versus informal language).

RLA.11.3.4 practice and master listening, speaking and viewing objectives (e.g., videos; PowerPoint presentations; web pages; evaluating a selection on audiotape).

Twelfth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts twelfth grade students will focus and polish personal skills and goals. Experiences such as a senior project or a sophisticated persuasive research paper will culminate the graduation experience. Readiness for the work place or post secondary education is the final educational reality check during the twelfth grade year. The expansion and appreciation of language and literature in spoken and written form is a primary focus. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.12.1.1 research, analyze and evaluate the historical, cultural and biographical influences to determine the impact on literary works.

RLA.12.1.2 analyze and evaluate author's choice of genre

RLA.12.1.3 increase the amount of independent reading with emphasis on American, British and World literature.

RLA.12.1.4 automatically apply appropriate reading strategies necessary for various reading purposes (e.g., literary experience; information; task performance).

RLA.12.1.5 analyze and evaluate characteristics of author's style, purpose and technique from a variety of selections (e.g., critical review; literary/character analysis).

RLA.12.1.6 construct supportable conclusions, make inferences and generalizations, and interpret character traits from explicit and implicit ideas.

RLA.12.1.7 analyze and evaluate persuasive language and techniques (e.g., advertisements; junk mail; web sites; news stories).

RLA.12.1.8 expand vocabulary through various literary works and analyze word and etymologies to determine meaning.

RLA.12.1.9 interpret and evaluate the author's choice of various literary devices and techniques, in particular, figurative language (e.g., personification; archetypes; allegorical patterns).

RLA.12.1.10 analyze and evaluate types of text according to content, structure and tone.

RLA.12.1.11 read and evaluate literary criticism applicable to the genre being studied.

Policy 2520: Content Standards and Objectives for West Virginia Schools

David Stewart
State Superintendent of Schools

December 2001

Foreword

The West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520: *Content Standards and Objectives for West Virginia Schools.*

Committees of educators from across the state gathered to work on curriculum refinement. The committees incorporated content based on the most current research, national standards and best teaching practices in the field. Primary issues that have been addressed in the current revision work are building a rigorous and challenging curriculum, ensuring a curriculum that is accessible to every student, and designing a format that can easily be used and understood.

West Virginia educators have played a key role in shaping the content standards. Their contribution was critical in creating a policy that is meaningful for the classroom.

A primary change in Policy 2520 is that each content area begins with a set of content standards. Grade-level objectives are then organized under the standards, so that the focus stays on helping students achieve the comprehensive goals, not just mastering the incremental steps. The objectives (those incremental steps) are still there--curriculum committees worked very hard to consolidate, delete, sequence, and clarify as needed to produce a picture of the curriculum that is clear in its intent and manageable in its implementation.

Another change is the addition of performance descriptors. Performance descriptors answer the question "How well does the student perform on the content standards at any given grade level?" (See "Explanation of Terms" section for further discussion of this topic.)

The content standards, objectives and performance descriptors combine to give teachers a powerful resource for planning instruction. The sequencing of the grade level objectives and the levels of performance descriptors acknowledge that students acquire skills and knowledge in increments and at different rates. The focus throughout the document remains on achieving at a high level and on offering all students in West Virginia rigor and challenge.

David Stewart
State Superintendent of Schools

Explanation of Terms

Content Standards (or Instructional Goals) are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Three performance levels have been proposed for West Virginia: distinguished, mastery, and partial mastery. A general description of each of these categories is listed below:

- **Distinguished**: Superior performance that goes beyond grade level or course expectations.
- **Mastery:** Solid academic performance at the grade level or in the course. Students demonstrate competency in challenging subject matter, can apply knowledge and skills to real-world situations, and can use analytical skills appropriate to the subject matter.
- **Partial Mastery:** Incomplete mastery of prerequisite knowledge and skills that are necessary for success at the grade level or in the course.

Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills they are building in their students. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of three parts, each part separated by a period:

- The content area code (e.g., MA for Mathematics, RLA for Reading and English Language Arts);
- The letter S, for Standard; and
- The standard number.

Illustration: RLA.S.1 refers to Reading and English Language Arts content standard #1.

Numbering of Objectives

The number of each objective is composed of four parts, each part separated by a period:

- The content area code or course code (e.g., PS for Probability and Statistics, HAP for Human Anatomy and Physiology);
- The grade level (Exceptions are elementary West Virginia Studies, which uses **WV** instead of grade level; and high school mathematics courses and grades 11-12 science courses, which use no grade designation);
- The number of the content standard addressed; and
- The objective number.

Illustration: RLA.6.2.3 refers to a Reading and English Language Arts sixth grade objective that addresses standard #2 in Reading and English Language Arts, and that is the third objective listed under that standard.

Numbering of Performance Descriptors
The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- The content area code;
- The letters PD, for Performance Descriptors;
- The grade level; and
- The standard number.

Illustration: SS.PD.9.2 refers to Social Studies performance descriptors for ninth grade, content standard 2.

Unique Electronic Numbers (UENs)
Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520 is available on the Web, each standard, each objective, and each group of three performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520 is approved by the State Board of Education. The date is not explicitly printed in the document but it is assumed to be part of every UEN. As sections of 2520 are revised, UENs will be changed to reflect the new approval date.

The prefix for the UENs in this version of Policy 2520 is "200112.", indicating that the Board approval date is December 2001.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for performance descriptors for fifth grade science, standard #2 will be "200112.SC.PD.5.2".

MATHEMATICS

Mathematics standards have been written in response to the need to better prepare students for college, other post-secondary education, and gainful employment. The five mathematics standards, Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability, are aligned directly with the National Council of Teachers of Mathematics document, *Principles and Standards for School Mathematics* released in 2000. See http://www.nctm.org to access the NCTM document. The curriculum is designed to be ambitious and rigorous at all grade levels. This rigor is required to achieve a society that has the capability to think and reason mathematically.

The standards describe what each student of mathematics should be able to accomplish in K-12. The objectives spiral upward through the grade levels, eliminating repetition of content and increasing in rigor throughout the student's academic career. It is important that all students value mathematics, become confident in their ability to do mathematics, become mathematical problem solvers, communicate mathematically, make connections to other content areas and to the real world application of mathematics, and learn to reason mathematically.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The content and character of school mathematics provide a vision to guide educators as they strive for continual improvement of mathematics education. The following six principles for school mathematics are the major influences on the improvement of classrooms, schools and educational systems.

1. **Equity:** High expectations and strong support for all students.
2. **Curriculum:** Coherent, focused on important mathematics, and well articulated across the grades.
3. **Teaching:** Understanding what students know and need to learn and then challenging and supporting them to learn it well.
4. **Learning:** Students must learn mathematics with understanding, actively building new knowledge from experience and prior knowledge.
5. **Assessment:** Assessment should support the learning of important mathematics and furnish useful information to both teachers and students.
6. **Technology:** Technology is essential in teaching and learning mathematics; it influences the mathematics that is taught and enhances students' learning.

Mathematics Content Standards K-12

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Kindergarten Mathematics Content Standards and Objectives

Kindergarten objectives emphasize the use of manipulatives, concrete materials, and appropriate technology so that students explore and develop ideas that are fundamental to the study of mathematics: number, counting, ordering, comparing, classifying, patterning, shape, size, position, numeration, measuring, and problem solving. The emphasis is on experience and growth in mathematics. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.K.1.1 count forward to 20 and backward from 10 with and without objects.
MA.K.1.2 read, write, order, and compare numbers to 20.
MA.K.1.3 count and group concrete items by ones and tens.
MA.K.1.4 identify place value of each digit utilizing standard and expanded form through 20.
MA.K.1.5 identify ordinal positions 1st – 10th and directionality.
MA.K.1.6 estimate the number of objects in a group of 20 or less and count to determine reasonableness.
MA.K.1.7 identify and name halves and whole using concrete items.
MA.K.1.9 model addition and subtraction of whole numbers using 10 or less items and write the corresponding number sentence.
MA.K.1.9 understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property).
MA.K.1.10 solve grade level appropriate problems using a variety of strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.K.2.1 sort and classify objects by one attribute.
MA.K.2.2 identify, describe, and extend a repeating pattern found in common objects, sound, and movement.
MA.K.2.3 model and identify patterns of counting by 5's and 10's.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.K.3.1 use physical materials to construct, identify, and classify basic geometric plane shapes: circle, square, rectangle, triangle.
MA.K.3.2 identify basic geometric shapes in the environment.
MA.K.3.3 describe spatial relationships: inside/outside, top/bottom, before/after.
MA.K.3.4 identify the separate parts used to make a whole object.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.K.4.1 estimate the size of an object and compare and order objects with respect to a given attribute.
MA.K.4.2 use standard and nonstandard units of measure to find the length of an object.
MA.K.4.3 compare two objects in nonstandard units of measure, according to one or more of the following attributes: length, height, weight.
MA.K.4.4 name the days of the week and the seasons of the year.
MA.K.4.5 read time to the nearest hour using analog and digital clocks.
MA.K.4.6 identify the name and value of penny, nickel, and dime.
MA.K.4.7 determine the value of a collection of pennies with a total value less than twenty cents.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.K.5.1 collect, sort and organize data as a group project.
MA.K.5.2 construct graphs using objects and pictures.
MA.K.5.3 analyze data represented on a graph using grade level appropriate questions.

First Grade Mathematics Content Standards and Objectives

The first grade objectives continue the emphasis on the use of manipulatives, concrete material, and appropriate technologies to give students the foundation needed to explore new mathematical concepts. Development of mathematical language allows students to explain such concepts as: addition and subtraction of whole numbers; knowing the value of coins; knowing addition and subtraction facts; identifying two- and three- dimensional figures; and gathering, organizing, and explaining data. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.1.1.1	count forward to 100 and backward from 20 with and without objects.
MA.1.1.2	read, write, order, and compare numbers to 100.
MA.1.1.3	model and identify odd and even numbers to 20 with and without objects.
MA.1.1.4	count and group concrete items by ones, tens, and hundreds.
MA.1.1.5	identify place value of each digit utilizing standard and expanded form through 100.
MA.1.1.6	identify and read ordinal numbers 1st - 20th.
MA.1.1.7	estimate the number of objects in a group of 100 or less and count to determine reasonableness of estimate.
MA.1.1.8	identify and name halves, thirds, and fourths as part of a whole and as part of a group using models.
MA.1.1.9	model addition and subtraction of whole numbers using 18 or less items and write the corresponding number sentence.
MA.1.1.10	understand meanings of operations and the relationship between addition and subtraction (e.g., identity element of addition, commutative property, fact families, inverse operations)
MA.1.1.11	memorize basic addition facts with sums to 10 and corresponding subtraction facts.
MA.1.1.12	model 2-digit addition and subtraction without regrouping to solve the algorithm.
MA.1.1.13	add three numbers with a sum of 18 or less.
MA.1.1.14	solve grade level appropriate picture and story problems using multiple strategies.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.1.2.1 sort and classify objects by more than one attribute.
MA.1.2.2 analyze and create a repeating pattern using common objects and numbers.
MA.1.2.3 use input/output model with grade appropriate functions.
MA.1.2.4 identify and write number patterns by 2's, 5's, and 10's.
MA.1.2.5 identify and represent number patterns using words, AB form, and T-charts.
MA.1.2.6 use models to demonstrate that the quantities on each side of a number sentence are equivalent.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

MA.1.3.1 draw and describe triangles, squares, circles, and rectangles according to number of sides and vertices.
MA.1.3.2 use physical materials to construct, identify, and classify three-dimensional figures: cube, cone, sphere, rectangular solid, pyramid, and cylinder.
MA.1.3.3 identify three-dimensional shapes in the environment.
MA.1.3.4 identify and draw open and closed figures.
MA.1.3.5 identify, determine, and draw a line of symmetry.
MA.1.3.6 identify and draw plane shapes that are congruent.
MA.1.3.7 describe spatial relationships: over/under, left/right.
MA.1.3.8 find and name locations with simple relationships on a coordinate system.
MA.1.3.9 describe the shape created by combining two or more two-dimensional shapes.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.1.4.1	estimate, measure, compare and order using customary, metric, and nonstandard units to determine length to nearest whole unit.
MA.1.4.2	understand appropriate grade level conversions within a system of measurement.
MA.1.4.3	compare two objects or events according to one or more of the following attributes: length, height, weight, time, temperature and volume.
MA.1.4.4	name the months of the year and find a date on a monthly calendar.
MA.1.4.5	explain time concept in context of personal experience.
MA.1.4.6	read time to the half hour using an analog and digital clock.
MA.1.4.7	calculate elapsed time to the hour.
MA.1.4.8	identify the name and value of quarter and dollar.
MA.1.4.9	count and trade a collection of pennies, nickels, and dimes with a total value of 100 cents or less.
MA.1.4.10	role-play making change up to a dime.
MA.1.4.11	select the appropriate tools of measurement to determine length, weight, volume and temperature.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.1.5.1	identify and investigate various forms of data collection.
MA.1.5.2	read and interpret a pictograph with each picture representing a single unit.
MA.1.5.3	conduct simple experiments and use the data to predict which of the events is more likely or less likely to occur if the experiment is repeated.
MA.1.5.4	discuss events related to students' experiences as likely or unlikely.
MA.1.5.5	tally by one's, organize the data in a chart/table, and construct a bar graph; read and interpret tally charts and tables.
MA.1.5.6	analyze data represented on a graph using grade level appropriate questions.

Second Grade Mathematics Content Standards and Objectives

The second grade objectives help a student to become a more independent problem solver through concrete and technology related experiences which explore new problem solving strategies, everyday use of mathematical language, and reasonableness and interrelationships of mathematics. These concepts include: place value through thousands, estimation, introduction of properties of mathematics, and measurement which includes spatial perception. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.2.1.1	read, write, order, and compare numbers to 1000.
MA.2.1.2	identify any number as odd or even.
MA.2.1.3	count and group concrete items by 1's, 10's, 100's, and 1000's.
MA.2.1.4	identify place value of each digit utilizing standard and expanded form through 1000.
MA.2.1.5	identify and read any ordinal number.
MA.2.1.6	round to nearer 10 and 100 to better understand place value.
MA.2.1.7	identify and name fractions as part of a whole and as part of a group using models.
MA.2.1.8	understand meaning of operations and the relationship between addition and subtraction (e.g., identity element of addition, associative property, commutative property, inverse operations, fact families).
MA.2.1.9	memorize basic addition facts with sums to 18 and corresponding subtraction facts.
MA.2.1.10	model 2- and 3-digit addition and subtraction without and with regrouping to solve the algorithm.
MA.2.1.11	use rounding to determine the reasonableness of a sum or a difference.
MA.2.1.12	solve grade level appropriate story problems that require one or two-step solutions using multiple strategies.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.2.2.1	analyze, describe, extend and create a growing pattern.
MA.2.2.2	use input/output model with grade appropriate functions.
MA.2.2.3	model and identify patterns of counting by 3's and 4's.
MA.2.2.4	given the rule, complete the pattern.
MA.2.2.5	use models to demonstrate equivalency of two numerical expressions written as a number sentence.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.2.3.1	identify and describe a cube, rectangular solid, cylinder, cone, and pyramid according to the number of faces and edges.
MA.2.3.2	compare and contrast plane and solid geometric shapes.
MA.2.3.3	given a design with a line of symmetry, draw the mirror image.
MA.2.3.4	model line segments and angles.
MA.2.3.5	identify the congruent shape that has been rotated and/or reflected.
MA.2.3.6	plot locations with simple relationships on a coordinate plane.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.2.4.1	use a ruler to draw and compare lengths given lengths in centimeters and inches.
MA.2.4.2	estimate and determine the perimeter of a polygon.
MA.2.4.3	estimate and count the number of square units needed to cover a given area.
MA.2.4.4	understand appropriate grade level conversions within a system of measurement.
MA.2.4.5	estimate and determine weight/mass of familiar objects in pounds and kilograms.
MA.2.4.6	order events in relation to time.
MA.2.4.7	given a calendar, determine past and future dates of the week and identify specific dates.
MA.2.4.8	read time to the nearest quarter hour using an analog and digital clock.
MA.2.4.9	calculate elapsed time to the half hour.
MA.2.4.10	read and write amounts of money to a dollar.
MA.2.4.11	role-play making change to a dollar.
MA.2.4.12	read Celsius and Fahrenheit thermometers.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.2.5.1 create, read, and interpret a pictograph with each picture representing greater than or less than a simple unit.
MA.2.5.2 conduct simple experiments with more than two outcomes and use the data to predict which event is more, less, or equally likely to occur if the experiment is repeated.
MA.2.5.3 analyze data represented on a graph using grade level appropriate questions.
MA.2.5.4 formulate questions, collect data, organize and display as a chart/graph.

Third Grade Mathematics Content Standards and Objectives

The third grade objectives extend the students' mathematical skills and concepts through concrete experiences and appropriate technology. These concepts and operations include: whole number operations; comparing and ordering numbers to hundredths and ten thousands; fractions and decimals; multiplication facts through five with corresponding division facts. Additional concepts include gathering and organizing data, estimating and performing measurements. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.3.1.1 read, write, order, and compare numbers to 10,000.
MA.3.1.2 read, write, order, and compare decimals to hundredths with models.
MA.3.1.3 identify place value of each digit utilizing standard and expanded form through 10,000.
MA.3.1.4 estimate to nearer 1000 using rounding, benchmarks, and compatible numbers to determine reasonableness of an answer.
MA.3.1.5 identify fractions as part of a whole/one and as part of a group using models and pictorial representations.
MA.3.1.6 compare and order fractions with like and unlike denominators using concrete models.
MA.3.1.7 add and subtract fractions with like denominators using concrete models and pictorial representations.

MA.3.1.8 recognize and model equivalent fractions using concrete materials.
MA.3.1.9 recognize and model proper and improper fractions and mixed numbers.
MA.3.1.10 add and subtract 2- and 3-digit whole numbers and money without and with regrouping.
MA.3.1.11 understand multiplication as repeated addition and division as repeated subtraction.
MA.3.1.12 understand meanings of operations and the relationship between multiplication and division (e.g., identity element of multiplication, commutative property, property of zero, fact families, associative property).
MA.3.1.13 memorize basic multiplication facts 0-5 and the corresponding division facts.
MA.3.1.14 model multiplication of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.15 model division of 2- and 3-digit numbers by a 1-digit number.
MA.3.1.16 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students apply their knowledge of benchmarks to solve problems involving comparing, adding, and subtracting decimals and fractions with like denominators; and know multiplication facts through 9's and the corresponding division facts.
- **Mastery**
  Third grade students performing at mastery level represent fractions and decimals using number lines, models and pictures, memorize multiplication facts through 5's and the corresponding division facts, compare numbers from 100ths to 10,000, estimate, add and subtract whole numbers, and use estimation to determine the reasonableness of an answer.
- **Partial Mastery**
  Third grade students performing at the partial mastery level represent fractions and decimals using models and pictures, recall multiplication facts through 5's and the corresponding division facts, read and write numbers from 100ths to 10,000, and estimate, add, and subtract whole numbers without regrouping.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.3.2.1 analyze and complete a geometric pattern.
MA.3.2.2 use input/output model with grade appropriate functions.
MA.3.2.3 identify and write number patterns of 3's and 4's.
MA.3.2.4 identify and write the rule of a given pattern.
MA.3.2.5 write equivalent numerical expressions.
MA.3.2.6 represent the idea of a variable as an unknown quantity using a symbol.

Performance Descriptors (MA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level determine the input, when given the output of a function and use algebraic methods to generalize and write the rules for patterns.

- **Mastery**
  Third grade students performing at mastery level use algebraic methods to generalize and write the rules for patterns.
- **Partial Mastery**
  Third grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.3.3.1 identify basic polygons and their components through decagon.
MA.3.3.2 identify and describe a cube, rectangular solid, cylinder, cone and pyramid according to the number of faces, edges and vertices.
MA.3.3.3 from a plane drawing, construct and identify the solid figure.
MA.3.3.4 identify, determine and draw lines of symmetry.
MA.3.3.5 describe lines and rays.
MA.3.3.6 identify and draw right, obtuse and acute angles.
MA.3.3.7 given a model, draw an example of a flip, slide and turn.
MA.3.3.8 name the location of a point on a one-quadrant grid.

Performance Descriptors (MA.PD.3.3)
- **Distinguished**
  Third grade students performing at the distinguished level generalize the similarities and differences among plane and solid figures; describe spatial relationships using coordinate geometry; and draw acute, right, and obtuse angles.
- **Mastery**
  Third grade students performing at mastery level identify basic polygons and their components; describe geometric solids according to faces, edges and vertices; and draw acute, right and obtuse angles. Students name the location of a point in the first quadrant.
- **Partial Mastery**
  Third grade students performing at the partial mastery level identify basic polygons and their components, describe geometric solids, and identify angles. Students name the location of a point in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.3.4.1 estimate, measure, compare, order and draw lengths using inches (to the nearest ½ inch), feet, yards, centimeters and meters.

MA.3.4.2 estimate and count the number of cubes in a rectangular solid to determine volume.

MA.3.4.3 discover the formula for determining the area of a rectangle.

MA.3.4.4 understand appropriate grade level conversions within a system of measure.

MA.3.4.5 estimate and measure results of mass/weight in ounces, pounds, grams, and kilograms.

MA.3.4.6 read time to 5-minute intervals using analog and digital clocks.

MA.3.4.7 calculate elapsed time to quarter-hour.

MA.3.4.8 read and write amounts of money to $100.00.

MA.3.4.9 role-play making change up to $10.00.

MA.3.4.10 estimate, read, and recognize common temperatures of Celsius and Fahrenheit.

Performance Descriptors (MA.PD.3.4)

- **Distinguished**
  Third grade students performing at the distinguished level estimate and compare measures of length, weight, and temperature, tell time to the nearest five minutes, calculate elapsed time to the quarter hour, and make change up to $10.00 in problem solving situations.
- **Mastery**
  Third grade students performing at mastery level estimate and compare measures of length, weight, and temperature, tell time to nearest 5 minutes and calculate elapsed time to the quarter hour, and make change up to $10.00.
- **Partial Mastery**
  Third grade students performing at the partial mastery level measure length, weight, and temperature, tell time to nearest 5 minutes, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.3.5.1 collect data from observation, surveys, and experiments, and construct and label the graph.

MA.3.5.2 use a timeline to determine a sequence of events.

MA.3.5.3 experiment and describe concepts of probability and chance and list possible outcomes from a sampling.

MA.3.5.4 analyze data represented on a graph by generating questions using grade level appropriate questions.

Performance Descriptors (MA.PD.3.5)

- **Distinguished**
  Third grade students performing at distinguished level analyze data from a graph or an experiment by generating questions and calculate the mean.

- **Mastery**
  Third grade students performing at the mastery level organize collected data, calculate the mean, and draw conclusions from a graph or an experiment.
- **Partial Mastery**
  Third grade students performing at the partial mastery level collect, organize, and display data.

Fourth Grade Mathematics Content Standards and Objectives

The fourth grade objectives emphasize critical thinking skills to create independent problem solvers who possess a personalized set of skills and strategies to solve problems in everyday life. Concepts which are stressed include: multiplication and division of two-and three-digit numbers, construction and description of objects from different perspectives, estimation, reading temperatures, description of possible outcomes in a given situation, use of calculators and computers, and describing mathematical relationships and patterns in other content areas and the real world. Additional concepts include adding and subtracting like fractions, and adding and subtracting decimals. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.4.1.1 read, write, order, and compare numbers to 1,000,000.
MA.4.1.2 read, write, order, and compare decimals to thousandths with and without models and pictorial representations.
MA.4.1.3 identify place value of each digit utilizing standard and expanded form through 1,000.000.
MA.4.1.4 estimate to nearer 10,000 using rounding, benchmarks, and compatible numbers and identify over and under estimates to determine reasonableness of an answer.
MA.4.1.5 compare and order fractions with like and unlike denominators using pictorial representations.
MA.4.1.6 add and subtract fractions with like and unlike denominators using pictorial representations.
MA.4.1.7 recognize and model equivalent fractions using pictorial representations.
MA.4.1.8 model addition and subtraction of mixed numbers without and with regrouping to solve the algorithm.
MA.4.1.9 understand the relationship of fractions to decimals using concrete objects and pictorial representations.
MA.4.1.10 round decimals to the nearest whole, 10th, or 100th.
MA.4.1.11 add and subtract decimals to the 1000th place.
MA.4.1.12 apply the distributive property of multiplication over addition.
MA.4.1.13 memorize basic multiplication facts and corresponding division facts.
MA.4.1.14 multiply 2-and 3-digit numbers by 1- and 2-digit numbers.
MA.4.1.15 divide 2-and 3-digit numbers by 1-and 2-digit numbers.
MA.4.1.16 apply the order of operations in solving problems.

MA.4.1.17 solve grade level appropriate story problems using multiple strategies.

Performance Descriptors (MA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level choose the operation, solve problems, and justify answers. Students add and subtract fractions and decimals; multiply and divide whole numbers in problem solving situations; compare numbers from 1000ths to 1,000,000; and apply order of operations to solve problems.
- **Mastery**
  Fourth grade students performing at mastery level demonstrate mastery of all basic facts, add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, compare numbers from 1000ths to 1,000,000, and apply order of operations to solve problems.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level add and subtract fractions and decimals with pictorial representation, multiply and divide whole numbers in problem solving situations, and compare numbers from 1000ths to 1,000,000.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.4.2.1 solve problems, involving patterns.
MA.4.2.2 use input/output model with grade appropriate functions.
MA.4.2.3 understand the relationship between number patterns and multiples.
MA.4.2.4 use patterns to predict the nth term.
MA.4.2.5 represent the idea of a variable as an unknown quantity using a letter.

Performance Descriptors (MA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write an expression using a variable to represent the unknown quantity in problem-solving situations and predict a pattern to the nth term.
- **Mastery**
  Fourth grade students performing at mastery level predict a pattern to the nth term.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level use algebraic methods to extend a pattern.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.4.3.1 identify plane figures and their components.
MA.4.3.2 compare and contrast quadrilateral shapes.
MA.4.3.3 describe three-dimensional objects from different perspectives.
MA.4.3.4 identify and draw intersecting, parallel, and perpendicular lines.
MA.4.3.5 draw, label, compare, and classify acute, right, and obtuse angles.
MA.4.3.6 draw a design with one line of symmetry.
MA.4.3.7 graph/plot ordered pairs on a one-quadrant grid.
MA.4.3.8 draw and identify parts of a circle: center point, diameter, and radius.

Performance Descriptors (MA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level match orthogonal drawings and nets to three-dimensional figures, create figures that include given geometric properties, and plot and graph ordered pairs in the first quadrant.
- **Mastery**
  Fourth grade students performing at mastery level compare and contrast quadrilaterals, describe three-dimensional objects from different perspectives, classify angles, and draw lines that are parallel, perpendicular, and intersecting. Students draw and label parts of a circle and plot and graph ordered pairs in the first quadrant.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level classify lines, angles, and quadrilaterals and identify three-dimensional objects from different perspectives; plot and graph ordered pairs in the first quadrant.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement;
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.4.4.1 estimate, measure, compare, order and draw lengths using customary and metric units.
MA.4.4.2 determine and compare areas of rectangles and squares by multiplying length and width.
MA.4.4.3 discover the formula for volume of a rectangular prism.
MA.4.4.4 understand appropriate grade level conversions within a system of measure.
MA.4.4.5 read scales of weight, capacity, and temperature and select appropriate unit.
MA.4.4.6 read time to nearest minute.

MA.4.4.7 determine elapsed time in hours/ minutes within a 24-hour period.
MA.4.4.8 count coins and bills and determine correct change.

Performance Descriptors (MA.PD.4.4)

- **Distinguished**
  Fourth grade students performing at the distinguished level solve problems involving measures of volume and capacity, perimeter and area, elapsed time and money, and convert units within a system of measurement.
- **Mastery**
  Fourth grade students performing at mastery level estimate and compare measures of volume and capacity, estimate and compare areas of rectangles, tell time to the nearest minute and calculate elapsed time in a 24-hour period, and calculate change in problem solving situations using money.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level measure volume and capacity, determine the area of rectangles, tell time to the nearest minute, and calculate change.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives

Students will:

MA.4.5.1 understand and reason about the use and misuse of statistics in our society.
MA.4.5.2 read and interpret information represented on a circle graph.
MA.4.5.3 collect, organize, display, read and interpret data from a problem solving situation in line graphs, bar graphs, tally charts and tables with scale increments greater than one.
MA.4.5.4 list all possible outcomes for an experiment using a tree diagram.
MA.4.5.5 determine mean, median, mode and range from collected data.

Performance Descriptors (MA.PD.4.5)

- **Distinguished**
  Fourth grade students performing at distinguished level calculate the mode, median and range; and make inferences and predictions based on data from line graphs, circle graphs and tree diagrams.
- **Mastery**
  Fourth grade students performing at the mastery level collect (whole number) data and calculate the mode, median, and range. Students read and interpret data represented by line graphs, circle graphs, and tree diagrams.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read data represented with line graphs, circle graphs, and tree diagrams.

Fifth Grade Mathematics Content Standards and Objectives

Building on mastery of the basic facts of addition, subtraction, multiplication, and division, the fifth grade objectives place emphasis on developing proficiency in using whole numbers, fractions, and decimals to solve problems. Students will collect, display and analyze data in a variety of ways and solve probability problems. Students will solve problems involving area and perimeter, will classify polygons, plot points on a coordinate plane, and write a number sentence using a variable to solve problems. Students should be actively engaged, continuing to use concrete materials and appropriate technologies such as calculators and computers. Problem solving should be integrated throughout all the strands. The development of a variety of problem-solving strategies should be a major goal of mathematics at this grade level. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.5.1.1 read, write, order and compare all whole numbers.
MA.5.1.2 read, write, order and compare all decimals.
MA.5.1.3 identify place value of each digit utilizing standard and expanded form in any whole number.
MA.5.1.4 estimate with whole numbers and decimals, including money, to determine reasonableness of an answer.
MA.5.1.5 identify and use the divisibility rules of 2, 3, 5, 9 and 10.
MA.5.1.6 compare and order fractions, improper fractions and mixed numbers with like and unlike denominators (e.g., greatest common factor, lowest common multiple).
MA.5.1.7 model and write equivalencies of fractions, decimals, percents, and ratios.
MA.5.1.8 add and subtract fractions and mixed numbers.
MA.5.1.9 model multiplication and division of fractions to solve the algorithm.
MA.5.1.10 model multiplication of decimals and division of decimals by a whole number divisor to solve the algorithm.
MA.5.1.11 develop fluency in addition, subtraction, multiplication and division of whole numbers.
MA.5.1.12 solve grade level appropriate story problems using multiple strategies.
MA.5.1.13 state fractions in lowest terms.

Performance Descriptors (MA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level choose the operation, solve problems, and justify answers, multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms.
- **Mastery**
  Fifth grade students performing at mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers and give answers in lowest terms, and choose the appropriate operation and solve problems.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level multiply and divide fractions and decimals with pictorial representation, add and subtract fractions and mixed numbers terms, and choose the appropriate operation to solve problems.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:
MA.5.2.1 explore a variety of patterns with missing elements (e.g., square numbers, powers, triangular numbers, arithmetic sequences).
MA.5.2.2 use input/output model with grade appropriate functions.
MA.5.2.3 write a number sentence using a variable to solve problems.
MA.5.2.4 evaluate an expression given a value for the variable.

Performance Descriptors (MA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level describe how a change in one variable relates to a change in another and write number sentences using a variable to solve problems.
- **Mastery**
  Fifth grade students performing at the mastery level write number sentences using a variable to solve problems.
- **Partial Mastery**
  Fifth grades students performing at the partial mastery level use algebraic methods to extend a pattern and evaluate an expression.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
MA.5.3.1 classify and compare polygons.
MA.5.3.2 construct a 3-dimensional figure from different views (orthogonal drawings).
MA.5.3.3 measure angles using a protractor.
MA.5.3.4 draw a design with more than one line of symmetry.
MA.5.3.5 recognize the images of figures after reflections, translations and rotations.
MA.5.3.6 draw a similar figure using a scale.

Performance Descriptors (MA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level draw angles using a protractor, create a net when given a solid, and describe a series of motions to show that two shapes are congruent.
- **Mastery**
  Fifth grade students performing at mastery level classify and compare polygons, measure angles using a protractor, and draw a design with more than one line of symmetry.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level classify polygons, measure angles using a protractor, and identify more than one line of symmetry when given a figure.

Standard 4: Measurement (MA.S.4)

Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives

Students will:

MA.5.4.1	estimate, measure, compare, order and draw lengths of real objects in parts of an inch up to 1/8 of an inch and millimeters.
MA.5.4.2	determine and compare area of triangles and parallelograms using appropriate formula.
MA.5.4.3	solve problems using the formulas for determining volume of a rectangular prism.
MA.5.4.4	understand the relationship between area and perimeter of a plane figure.
MA.5.4.5	understand appropriate grade level conversions within a system of measure and apply to problem solving situations.
MA.5.4.6	evaluate and/or measure the weight/mass of real objects in ounces, pounds, tons, grams, and kilograms.
MA.5.4.7	calculate elapsed time.
MA.5.4.8	select appropriate customary and metric units and the tools for measuring to desired degree of precision.
MA.5.4.9	determine actual measurement from scale drawings.

Performance Descriptors (MA.PD.5.4)

- **Distinguished**
  Fifth grade students performing at the distinguished level apply appropriate tools, techniques, and formulas to determine measurements in problem solving situations. Students apply simple unit conversions within a system of measurement to solve problems.
- **Mastery**
  Fifth grade students performing at mastery level determine and compare area and perimeter of triangles and quadrilaterals using formulas, calculate elapsed time involving more than a 24-hour span, and select appropriate tools, formulas, and/or units of measure in problem solving situations.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level determine area and perimeter of triangles and quadrilaterals and calculate elapsed time within a 24-hour span.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.5.5.1 collect, organize, display, read and interpret data from a problem-solving situation in a stem and leaf plot.

MA.5.5.2 identify probabilities and solve problems involving the probability of an event by using tree diagrams or by construction of a sample space representing all possible results.

MA.5.5.3 construct, read, or interpret tables, charts, and graphs to draw reasonable inferences or verify predictions.

MA.5.5.4 model situations by carrying out experiments to determine probability.

MA.5.5.5 construct a circle graph.

Performance Descriptors (MA.PD.5.5)

- **Distinguished**
  Fifth grade students performing at distinguished level make inferences and predictions based on data from stem and leaf plots and circle graphs, and carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Mastery**
  Fifth grade students performing at the mastery level interpret stem and leaf plots and construct circle graphs. Students make predictions, carry out probability experiments, interpret a sample space, and compare their predictions to their results.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read a stem and leaf plot and verify predictions based on probability experiments.

Sixth Grade Mathematics Content Standards and Objectives

The sixth grade objectives place continued emphasis on the study of whole numbers, decimals and fractions. However, students need opportunities to apply their skills to real life applications. Calculators and computers may be used to solve problems. Decreased attention should be given to paper and pencil computations. Sixth graders will continue to use manipulatives whenever new material is introduced or whenever it is needed to review previously taught material. The areas of probability, statistics, geometry, and pre-algebra will be stressed. Students will use ratios to compare data sets, make geometric constructions of three-dimensional figures, explore thoroughly the algebra strand, and solve problems involving circles, volume and surface area. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.6.1.1 read, write, order, and compare numbers using scientific notation.
MA.6.1.2 identify prime and composite numbers up to 100.
MA.6.1.3 use prime factorization to determine the greatest common factor and least common multiple.
MA.6.1.4 identify and represent integers on a number line.
MA.6.1.5 use estimation to solve problems with whole numbers, fractions and decimals.
MA.6.1.6 solve problems in context involving addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers and decimals.
MA.6.1.7 identify, demonstrate, and apply the distributive, commutative, associative and identity properties.
MA.6.1.8 convert between fractions, mixed numbers, decimals and percents.
MA.6.1.9 find the percent of a number.

Performance Descriptors (MA.PD.6.1)

- **Distinguished**
  Sixth grade students performing at the distinguished level solve problems involving fractions, decimals, and percents less than one and greater than 100, and relatively prime numbers, and use the commutative, associative, identity, and distributive properties to solve problems. Students compare integers and represent numbers with prime factors in exponential form.
- **Mastery**
  Sixth grade students performing at mastery level solve problems involving fractions, decimals and percents. Students use the commutative, associative, identity, and distributive properties to solve problems. Students represent integers with manipulatives and on a number line. Students represent numbers with prime factorizations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve problems involving fractions and decimals and identify commutative, associative, and identity properties and find prime factorization of a number using a factor tree.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives
Students will:

MA.6.2.1 simplify numerical expressions using order of operations.
MA.6.2.2 identify missing elements in arithmetic and geometric patterns.

MA.6.2.3 explore a variety of patterns, including perfect squares, square roots and exponents.
MA.6.2.4 use input/output models and spreadsheets to evaluate functions.
MA.6.2.5 solve a proportion using cross multiplication.
MA.6.2.6 identify like terms and monomials.
MA.6.2.7 model addition, subtraction, multiplication and division of integers.
MA.6.2.8 locate and plot points within the four quadrants.
MA.6.2.9 use variables to represent and solve real world problems appropriate for the 6th grade using multiple strategies.

Performance Descriptors (MA.PD.6.2)

- **Distinguished**
  Sixth grade students performing at distinguished level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations. Students explain patterns in a clear concise manner.
- **Mastery**
  Sixth grade students performing at mastery level solve proportions, plot points in four quadrants, and simplify numerical expressions using order of operations. Students use manipulatives and/or drawings to model monomials, algebraic expressions, patterns, and equations.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level solve a proportion by cross-multiplying, plot points in the first quadrant, simplify numerical expressions using order of operations, and use manipulatives and/or drawings to model monomials, algebraic expressions and equations.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.6.3.1 classify lines as parallel, intersecting, perpendicular or skew.
MA.6.3.2 determine the sum of measures of angles in polygons.
MA.6.3.3 bisect a line segment using a compass and straightedge.
MA.6.3.4 draw an angle of a given measure.
MA.6.3.5 identify line symmetry and rotational symmetry in plane figures.
MA.6.3.6 define and sketch similar and congruent plane geometric figures.

Performance Descriptors (MA.PD.6.3)

- **Distinguished**
  Sixth grade students performing at distinguished level solve problems involving congruence and similarity of plane figures, calculate the sum of measures of angles in polygons, and compare and contrast line and rotational symmetry in plane figures.

- **Mastery**
  Sixth grade students performing at mastery level solve problems involving congruence and similarities of plane figures and calculate the sum of the measures of angles of polygons. Students identify rotational symmetry in plane figures.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level identify and describe congruence and similarity of plane figures, calculate the sum of the measures of the angles of a triangle and quadrilaterals. Students identify rotational symmetry in plane figures.

Standard 4: Measurement (MA.S.4)
Students will:
- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:
MA.6.4.1 derive approximation for pi using actual measurements.
MA.6.4.2 apply formulas to determine perimeter, circumference and/or area of plane figures including compound figures.
MA.6.4.3 investigate and model volume and surface area.
MA.6.4.4 select appropriate units and determine length, weight/mass and capacity/volume using metric and customary systems.
MA.6.4.5 construct scale drawings.

Performance Descriptors (MA.PD.6.4)
- **Distinguished**
  Sixth grade students performing at distinguished level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve application problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Mastery**
  Sixth grade students performing at mastery level calculate circumference, area, perimeter of plane figures, volume and surface area of three-dimensional figures, and give solutions in appropriate units. Students determine scale factor of similar plane figures and solve problems related to measurement. Students convert between units of measure within the metric and customary systems.
- **Partial Mastery**
  Sixth grade students performing at partial mastery level calculate perimeter and area of plane figures, the circumference of circles and the volume of a rectangular prism. Students determine the scale factor of similar figures, solve simple problems related to measurement and give solutions in appropriate units. Students convert between units of measure within the customary system.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:
- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.6.5.1 use spreadsheet software and graphing calculators to collect, organize, display, and read data using appropriate graphs and tables.
MA.6.5.2 interpret data using mean, median, mode, and range.
MA.6.5.3 determine the probability of a given event and express that probability as a ratio, decimal or percent.
MA.6.5.4 determine combinations, permutations and probability using sample spaces (by listing and tree diagrams).

Performance Descriptors (MA.PD.6.5)

- **Distinguished**
  Sixth grade students performing at distinguished level make conjectures about the outcomes of events based on simulations, and construct and interpret graphs, and interpret measures of central tendency and dispersion involving fractions and decimals. Students find combinations and permutations.
- **Mastery**
  Sixth grade students performing at mastery level calculate measures of central tendency and dispersion involving fractions and decimals. Students find the probability of an event, use combinations and permutations, and interpret graphs.
- **Partial Mastery**
  Sixth grade students performing at the partial mastery level read a histogram and record data; calculate measures of central tendency and dispersion. Students find the probability of an event, and determine combinations.

Seventh Grade Mathematics Content Standards and Objectives

The seventh grade year is an introduction to high school subjects such as algebra, geometry, probability and statistics. With less emphasis on paper/pencil computation, calculators are emphasized in all facets of the mathematics daily work as well as test situations. Students should, by this time, have a mastery of general mathematics topics; however, review of all basic mathematics skills occurs in a relevant context. Problem solving is embedded in the curriculum utilizing a variety of new concepts, while cooperative learning promotes communication skills. Students are routinely permitted to use available technology. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)
Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives
Students will:

MA.7.1.1 compare and order integers, decimals, and fractions using symbols (<,>,=) manipulatives and graphing on a number line.

MA.7.1.2 find powers, squares, and square roots using manipulatives, models, calculators, tables and mental math.
MA.7.1.3 define absolute value and determine its effect on a number or expression.
MA.7.1.4 recognize and write rational numbers in the form a/b.
MA.7.1.5 perform operations with integers (e.g., addition, subtraction, multiplication, division).
MA.7.1.6 apply the commutative, associative, distributive, identity and inverse properties.
MA.7.1.7 solve application problems with whole numbers, decimals, fractions and percents.
MA.7.1.8 use appropriate estimation strategies in problem situations including evaluating the reasonableness of a solution.

Performance Descriptors (MA.PD.7.1)

- **Distinguished**
  Seventh grade students performing at the distinguished level calculate powers, square roots, and absolute values and perform operations with integers. Students solve complex application problems and evaluate the reasonableness of solutions.
- **Mastery**
  Seventh grade students performing at mastery level calculate powers, square roots, and absolute values and perform operations with integers. Students solve application problems and evaluate the reasonableness of solutions.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level calculate powers, and absolute values; perform addition, multiplication and division with integers; and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.7.2.1 find missing elements in a variety of arithmetic and geometric patterns including algebraic sequences and series.
MA.7.2.2 simplify and evaluate numerical and algebraic expressions with whole numbers, integers, absolute value and exponents using the order of operations and exponential rules.
MA.7.2.3 add, subtract, multiply and divide monomials.
MA.7.2.4 find and use the Greatest Common Factor (GCF) and Least Common Multiple (LCM) of a set of monomials or algebraic fractions using prime factorization and exponent rules.
MA.7.2.5 input data into a spreadsheet to create input/output function tables.
MA.7.2.6 use ratios and proportions to represent and solve application problems.
MA.7.2.7 write and evaluate complex algebraic expressions for word phrases.
MA.7.2.8 use and apply scientific notation containing positive and negative exponents in problem solving situations.
MA.7.2.9 solve linear equations containing whole numbers, fractions, decimals and integers.
MA.7.2.10 solve inequalities using inverse operations and graph solutions.
MA.7.2.11 plot lines within the Cartesian coordinate plane from a table of values using the graphing calculator and dynamic geometry software.
MA.7.2.12 determine the slope of a line from its graphical representation.
MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies.

Performance Descriptors (MA.PD.7.2)

- **Distinguished**
  Seventh grade students performing at distinguished level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving complex problems.
- **Mastery**
  Seventh grade students performing at mastery level solve linear equations and inequalities, graph solutions, and graph lines within the coordinate plane. Students use ratio and proportion, scientific notation, and absolute value in solving problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve linear equations, graph lines within the coordinate plane, and solve simple problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)

Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives

Students will:

MA.7.3.1	identify and construct angle-pairs (e.g., adjacent, complementary, supplementary, vertical).
MA.7.3.2	use a formula to determine the sum of the measures of the interior angles of a polygon.
MA.7.3.3	use 2-dimensional representations of 3-dimensional objects to visualize and solve problems.
MA.7.3.4	construct congruent segments and angles, perpendicular bisectors of segments and angle-bisectors.
MA.7.3.5	apply and demonstrate line symmetry.
MA.7.3.6	apply transformations (rotations, reflections, translations) to plane figures using graph paper.
MA.7.3.7	solve ratio and proportion problems including scale drawings and similar polygons.

Performance Descriptors (MA.PD.7.3)

- **Distinguished**
  Seventh grade students performing at distinguished level solve practical problems involving similar figures, construct and bisect congruent segments and angles using a compass and straightedge. Students identify angle pairs and calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane.
- **Mastery**
  Seventh grade students performing at mastery level identify angle pairs and use formulas to calculate measures of interior angles of a polygon. Students determine types of symmetry and transformations on a coordinate plane and construct congruent segments and angles using a compass and straightedge. Students solve practical problems involving scale models.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level identify angle pairs, determine types of symmetry and transformations on a coordinate plane, and construct congruent segments and angles using a compass and straightedge.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.7.4.1 use and apply formulas in problem solving situations involving perimeter, circumference, area, surface area, distance and temperature (Celsius, Fahrenheit).
MA.7.4.2 use the concept of volume for prisms, pyramids, and cylinders as the relationship between the area of the base and height.
MA.7.4.3 use the Pythagorean Theorem to find the length of any side of a right triangle.
MA.7.4.4 convert units of measurement between customary and metric systems.

Performance Descriptors (MA.PD. 7.4)

- **Distinguished**
  Seventh grade students performing at distinguished level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms, pyramids, cones and cylinders and give solutions in appropriate units. Students select the correct formula from a list to solve distance, temperature, and Pythagorean Theorem problems.
- **Mastery**
  Seventh grade students performing at mastery level solve problems involving perimeter, circumference, area of two-dimensional figures, and surface area and volume of prisms and pyramids and give solutions in appropriate units. Students use the substitution property to solve distance, temperature, and Pythagorean Theorem problems.
- **Partial Mastery**
  Seventh grade students performing at partial mastery level solve problems using given formulas involving perimeter, circumference, area of regular polygons, circles, volume of prisms, and surface area of rectangular prisms. Students calculate slope of a line.

Standard 5: Data Analysis and Probability
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives (MA.S.5)
Students will:

MA.7.5.1 make and test conjectures based on probability results of experiments and simulations using appropriate technology.
MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine combinations and permutations.
MA.7.5.3 collect, organize, graphically represent, and interpret data displays including: frequency distributions, line-plots, scatter plots, box and whiskers, and multiple-line graphs using spreadsheet and graphing calculators.

MA.7.5.4 solve application problems involving measures of central tendency (mean, median, mode) and dispersion (range) from data, graphs, tables, and experiments using appropriate technology.

Performance Descriptors (MA.PD.7.5)

- **Distinguished**
  Seventh grade students performing at distinguished level find, use, and interpret interquartile range of a data set; and solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker and multiple-line graphs. Students determine if an event is dependent or independent, calculate the probability, and describe the outcome.
- **Mastery**
  Seventh grade students performing at mastery level solve application problems involving measures of central tendency and dispersion. Students collect, organize, and graphically represent frequency distributions, line-plots, scatter plots, box and whisker, and multiple-line graphs.
- **Partial Mastery**
  Seventh grade students performing at the partial mastery level calculate measures of central tendency and dispersion; collect, organize, and graphically represent data in frequency distributions, line plots and scatter plots; and compute probability of an independent event.

Eighth Grade Mathematics Content Standards and Objectives

Pre-Geometry with Algebra provides an alternative course for students who do not elect to take Algebra I in the eighth grade or who have not successfully mastered the new skills from *Pre-Algebra with Geometry* in the seventh grade. In addition to reinforcing the concepts presented in *Pre-Algebra with Geometry*, this course extends problem solving to a more sophisticated level. Students will continue to apply integer operations, properties, expressions and equations so as to reinforce these concepts in varied applications. Lessons involving cooperative learning, manipulatives, or technology will strengthen students' understanding of concepts while fostering communication and reasoning skills. Calculator use is emphasized for all mathematical tasks including assessment. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Number and Operations Objectives

Students will:

MA.8.1.1 compare and order rational and irrational numbers.

MA.8.1.2 utilize the properties of terminating, repeating, and non-repeating decimals, and conversions between fractions, mixed numbers, and decimals.

MA.8.1.3 extend scientific notation to numbers with a wide range of values using a calculator when appropriate.

MA.8.1.4 use powers, squares, and square roots to solve problems.
MA.8.1.5 solve consumer application problems including rates, tips, discounts, sales tax and interest.
MA.8.1.6 use estimation techniques with whole numbers, decimals, percent, fractions and mixed numbers to solve and verify solutions in application problems.
MA.8.1.7 solve application problems with whole numbers, decimals, fractions, percents and integers.
MA.8.1.8 develop computational strategies based on the commutative, associative, and identity properties with emphasis on the inverse and distributive properties.

Performance Descriptors (MA.PD.8.1)

- **Distinguished**
  Eighth grade students performing at the distinguished level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve complex application problems and justify solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level apply properties and solve problems involving pi, non-repeating decimals, scientific notation, powers, and square roots. Students solve consumer application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level identify properties and solve problems involving rational numbers and solve simple application problems.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra Objectives

Students will:

MA.8.2.1 use order-of-operations and exponents rules to solve application problems with numerical and algebraic expressions containing whole numbers, integers, absolute value, fractions and exponents.
MA.8.2.2 solve one and two step linear equations and inequalities with integers, fractions, and decimall solutions using paper and pencil, and graphing calculators.
MA.8.2.3 use ratio and proportion to create and solve equations.
MA.8.2.4 add and subtract polynomials.
MA.8.2.5 apply algebraic equations and expressions to solve application problems.
MA.8.2.6 apply inductive and deductive reasoning to write a rule from data in a function table.
MA.8.2.7 graph linear equations and inequalities within the Cartesian coordinate plane using ordered pairs, table of values, graphing calculators and dynamic geometry software.
MA.8.2.8 formulate and apply a rule to generate a arithmetic, geometric and algebraic pattern.
MA.8.2.9 determine the slope of a line given two-points or slope/y-intercept equation (y=mx+b).
MA.8.2.10 represent and solve real world problems appropriate for 8th grade using multiple strategies.

Performance Descriptors (MA.PD.8.2)

- **Distinguished**
  Eighth grade students performing at distinguished level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve complex application problems and explain solutions in a clear concise manner.

- **Mastery**
  Eighth grade students performing at mastery level solve two-step linear equations and inequalities, and graph linear equations and inequalities. Students select and apply algebraic equations, ratio and proportion, and function rules to solve application problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve two-step linear equations, graph linear equations, and solve problems using ratio and proportion.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:

MA.8.3.1 investigate the relationship between corresponding, alternate interior, and alternate exterior angles when parallel lines are cut by a transversal using models, pencil/paper and graphing calculator.

MA.8.3.2 classify polyhedrons according to the number and shape of faces; determine the relationship between vertices, faces and edges.

MA.8.3.3 construct perpendicular and angle bisectors.

MA.8.3.4 create geometric patterns including tiling, art design, tessellations and scaling using transformations (rotations, reflections, translations).

MA.8.3.5 use coordinate geometry to represent and examine properties of similar and congruent figures and graph transformations.

MA.8.3.6 create scale models including transformations, ratio, proportion and similar figures using pencil/paper and dynamic geometry software.

Performance Descriptors (MA.PD.8.3)

- **Distinguished**
  Eighth grade students performing at distinguished level create and describe scale models and geometric patterns, solve problems using angle relationships formed by parallel lines cut by a transversal, construct angle bisectors and transformations, and identify relationships between faces, vertices and edges in polyhedra.
- **Mastery**
  Eighth grade students performing at mastery level solve problems involving scale models, similar figures, and geometric patterns. Students determine angle relationships when parallel lines are cut by a transversal and construct angle bisectors and transformations. Students identify relationships between faces, vertices and edges in regular polyhedra.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level solve problems with scale models and simple geometric patterns, and determine angle relationships when parallel lines are cut by a transversal.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Measurement Objectives
Students will:

MA.8.4.1 estimate and solve application problems involving perimeter, area, surface area and volume of plane and solid geometric figures.

MA.8.4.2 use the concept of volume for cone and pyramids as one-third the product of the area of the base and the height.

MA.8.4.3 solve problems involving missing measurements in plane and solid geometric figures using formulas and drawings including irregular figures, models or definitions.

MA.8.4.4 solve right triangle problems using the Pythagorean Theorem, indirect measurement and definitions.

Performance Descriptors (MA.PD.8.4)

- **Distinguished**
  Eighth grade students performing at distinguished level solve complex application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units explaining solutions in a clear concise manner. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems explaining solutions in a clear concise manner.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving perimeter, area, surface area, volume, and missing measurements of geometric figures and give solutions in appropriate units. Students determine slope of a line given two points and the slope-intercept form of an equation of a line. Students apply the Pythagorean Theorem to solve problems.
- **Partial Mastery**
  Eighth grade students performing at partial mastery level solve simple application problems involving perimeter, area, surface area and volume of geometric figures; calculate slope of a line given two points or slope intercept form of an equation of a line;
  and calculate length of a side using the Pythagorean Theorem.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Data Analysis and Probability Objectives
Students will:

MA.8.5.1 use appropriate technology to solve application problems involving combinations and permutations.

MA.8.5.2 investigate the experimental probability and theoretical probability of an event.

MA.8.5.3 create and extrapolate information from multiple-bar graphs, box and whisker plots, and other data displays using appropriate technology.

MA.8.5.4 analyze problem situations, games of chance, and consumer applications using statistical samplings to determine odds and make predictions.

MA.8.5.5 draw inferences and construct convincing arguments, including misuses of statistical or numeric information, based on data analysis.

Performance Descriptors (MA.PD.8.5)

- **Distinguished**
  Eighth grade students performing at distinguished level extrapolate information to make predictions about data samples and calculate probabilities for compound events.
- **Mastery**
  Eighth grade students performing at mastery level solve application problems involving combinations, permutations, games of chance, and statistical samplings. Students, given the results of experiments, calculate the experimental and theoretical probabilities of simple events.
- **Partial Mastery**
  Eighth grade students performing at the partial mastery level calculate factorials and theoretical probability of a simple event. Students collect data from a probability experiment.

Algebra/Geometry Preparation Objectives

Algebra/Geometry preparation is an elective course designed to be a bridge between the concrete elementary curriculum and the more formal mathematics curriculum ahead. In this course students will explore algebraic concepts in an informal way to build a foundation for subsequent formal study of algebra. Such informal explorations should emphasize physical models, data, graphs, and other mathematical representations rather than facility with formal algebraic manipulations. The study of geometry is to assist students to represent and make sense of the world. Geometric models will provide a perspective from which students are to analyze and solve problems, and geometric interpretations are to help make abstract representations more easily understood. The study of geometry at this level should simply provide increased opportunities for students to engage in more systematic explorations. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Number and Operations (MA.S.1)

Students will:

- demonstrate understanding of numbers, ways of representing numbers, and relationships among numbers and number systems;
- demonstrate meanings of operations and how they relate to one another; and
- compute fluently and make reasonable estimates

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra/Geometry Preparation Objectives

Students will:

AGP.1.1 identify and use properties of numbers (commutative, associative, distributive, etc).

AGP.1.2 add, subtract, multiply, and divide decimals, integers, fractions and mixed numbers.

AGP.1.3 use order relations to compare, order, or locate whole numbers, integers, fractions, and decimals on a number line.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.2.1 substitute values, evaluate expressions involving variables, and calculate formulas to solve application problems.
AGP.2.2 solve equations with at least two operations.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.3.1 use a compass to construct congruent angles, bisect angles, and bisect line segments.
AGP.3.2 estimate and find circumference and area of a circle.
AGP.3.3 estimate and find the area and perimeter of polygons
AGP.3.4 estimate and find the surface area and the volume of three-dimensional figures.
AGP.3.5 identify angle relationships: complementary, supplementary, vertical, and adjacent.
AGP.3.6 identify angle relationships; involving parallel lines and apply in solving problems (corresponding angles, alternate interior angles, and alternate exterior angles).
AGP.3.7 investigate similar triangles and apply proportions in problem solving situations.
AGP.3.8 develop and explore circle relationships, emphasizing the vocabulary of circles.

Standard 4: Measurement (MA.S.4)
Students will:

- demonstrate understanding of measurable attributes of objects and the units, systems, and processes of measurement; and
- apply appropriate techniques, tools and formulas to determine measurements

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.4.1 estimate, measure, and perform operations involving length, mass, and capacity using customary and metric units.
AGP.4.2 use a protractor to measure and draw angles.

Standard 5: Data Analysis and Probability (MA.S.5)

Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

AGP.5.1 read, interpret, and construct graphs to solve problems.
AGP.5.2 use data to determine mean, median, mode, and range.
AGP.5.3 find the probability of complementary events and exclusive events.

Algebra I Objectives

Algebra I is a course that provides the gateway to all higher mathematics courses. This course uses a conceptual approach to mathematics and does not focus on algorithmic methods. Algebraic representations will be used to generalize, and the algebraic method will be viewed as a problem-solving tool. In planning for instruction, consideration should be given to the student's readiness for abstract concepts. Manipulatives, such as algeblocks, should be used to bridge the gap from the concrete to the abstract. Available technology such as calculators, computers, and graphing utilities are to be used as tools to enhance learning. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)

Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra I Objectives

Students will:

AI.2.1 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AI.2.2 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AI.2.3 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AI.2.4 solve literal equations for a given variable and apply the skills toward solving practical problems.
AI.2.5 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AI.2.6 solve absolute value equations in one variable and interpret the results on a number line.
AI.2.7 use the laws of exponents to perform operations on expressions with integral exponents.

AI.2.8	determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AI.2.9	graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AI.2.10	write an equation of a line given a graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AI.2.11	solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AI.2.12	add and subtract polynomials.
AI.2.13	multiply and divide binomials by binomials or monomials.
AI.2.14	factor polynomials by using appropriate methods.
AI.2.15	estimate and simplify square roots into both exact and approximate forms.
AI.2.16	solve quadratic equations by graphing, factoring and quadratic formula.
AI.2.17	add, subtract, multiply and divide simple rational expressions.
AI.2.18	collect, organize, interpret data and predict outcomes using the mean, mode, median, range and standard deviation.
AI.2.19	perform a linear regression and use the results to predict specific values of a variable, and identify the equation for the line of regression.
AI.2.20	predict the outcomes of simple events using the rules of probability.
AI.2.21	use process (flow) charts and histograms, scatter diagrams and normal distribution curves in order to perform statistical process (quality) control.

Applied Mathematics I Objectives

Applied Mathematics I and Applied Mathematics II reflect the content of a complete course in Applied Mathematics. Applied Mathematics I is the first half of the Applied Mathematics course. One Applied Mathematics credit will be given for successful completion of this course. Upon successful completion of both courses, Algebra I credit will be given. Applied Mathematics I is a lab-based course taught with teacher-led, concrete activities. This course is designed to develop algebraic concepts applicable in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics I Objectives
Students will:

AM1.2.1	solve practical problems involving computation using estimation.
AM1.2.2	write numbers in scientific notation and combine numbers written in scientific notation to solve practical problems.
AM1.2.3	distinguish between counting and measuring using micrometers, calipers and other precision tools to make measurements.
AM1.2.4	solve practical problems and interpret results using rational numbers and vectors.

AM1.2.5 evaluate algebraic expressions using grouping symbols, order of operations and properties of real numbers with justification of steps.
AM1.2.6 translate word phrases into algebraic expressions or word sentences into equations and inequalities.
AM1.2.7 justify steps in the solving of equations based on the properties of real numbers.
AM1.2.8 solve literal equations for a given variable and apply the skills toward solving practical problems.
AM1.2.9 solve practical problems using a four-step problem solving approach.
AM1.2.10 solve multi-step linear equations in one variable and apply skills toward solving practical problems.
AM1.2.11 solve multi-step linear inequalities in one variable, interpret the results on a number line and apply the skills toward solving practical problems.
AM1.2.12 solve absolute value equations in one variable and interpret the results on a number line.
AM1.2.13 collect, organize, interpret data, and predict outcomes using the mean, mode, median, range and standard deviation.
AM1.2.14 estimate and simplify square roots into both exact and approximate forms.
AM1.2.15 use the laws of exponents to perform operations on expressions with integral exponents.
AM1.2.16 predict the outcomes of simple events using the rules of probability.

Applied Mathematics II Objectives

Applied Mathematics II is the second half of the Applied Mathematics course. Upon successful completion of both courses, Algebra I credit will be given. Algebraic concepts will be taught using laboratory activities based on several strategies that include the use of the graphing calculator. Working in groups will be used to develop problem solving skills and social skills needed in the work place as well as in traditional areas. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Applied Mathematics II Objectives
Students will:
AM2.2.1 analyze a given set of data for the existence of a pattern numerically, algebraically and graphically; determine the domain and range; and determine if the relation is a function.
AM2.2.2 determine the slope of a line given an equation of a line, the graph of a line and two points to be identified.
AM2.2.3 graph linear equations using slope-intercept, point slope, and x- and y-intercepts.
AM2.2.4 write an equation of a line given graph of a line, two points on the line, the slope and a point, and the slope and y-intercept.
AM2.2.5 solve systems of linear equations numerically and graphically, by the elimination method and by the substitution method.
AM2.2.6 add and subtract polynomials.
AM2.2.7 multiply and divide binomials by binomials or monomials.

AM2.2.8 factor polynomials by using appropriate methods.
AM2.2.9 solve quadratic equations by graphing, factoring and quadratic formula.
AM2.2.10 add, subtract, multiply and divide simple rational expressions.
AM2.2.11 use process (flow) charts and histograms, scatter diagrams, and normal distribution curves in order to perform statistical process (quality) control.
AM2.2.12 perform a linear regression and use the results to predict specific values of a variable. Identify the equation for the line of regression.

Geometry and Applied Geometry Objectives

Geometry is a course designed for students who have successfully completed the objectives for Algebra I. The study of geometry should include experiences and activities that foster in students a feeling for the value of geometry in their lives. Students should be encouraged to develop conjectures by inductive processes using manipulatives and computer software. Cooperative learning groups are particularly effective in allowing students to become proficient in analyzing conjectures and in formulating proofs. Emphasis should be placed on applications to the work place and everyday life and on connections to other branches of mathematics and other disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Applied Geometry is a course for students who have successfully completed the objectives of Algebra I. Upon completion of this course a geometry credit will be given. Applied Geometry will use manipulatives to enhance the understanding of geometric concepts and terminology. Working in groups will allow students to analyze applications of geometry in their lives and in the work place. Concepts will be taught using laboratory activities including the use of technology as a learning tool. The objectives for Applied Geometry will be the same as those for Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Geometry Objectives
Students will:
G.3.1 represent points, lines, and planes pictorially with proper identification, as well as basic concepts derived from these undefined terms, such as segments, rays and angles.
G.3.2 differentiate between inductive and deductive reasoning.
G.3.3 use the basic concepts of symbolic logic including identifying the converse, inverse, and contrapositive of a conditional statement and testing the validity of conclusions with Venn Diagrams.
G.3.4 construct logical arguments in formal and informal methods with direct and indirect reasoning.
G.3.5 apply definitions, theorems, and postulates related to such topics as complementary, supplementary, and vertical angles and angles formed by perpendicular lines.

G.3.6 explore the relationship between angles formed by two lines cut by a transversal when lines are and are not parallel, and use the results to develop methods to show parallelism.
G.3.7 investigate and verify congruence relationships in triangles.
G.3.8 explore and identify properties of quadrilaterals and verify the properties for parallelograms, rectangles, rhombuses, squares, and trapezoids.
G.3.9 investigate measures of angles and lengths of segments to determine the existence of triangles (triangle inequality) and the order of sides and angles.
G.3.10 apply properties of similar triangles to determine inaccessible heights and distances, construct scaled drawings, and derive the basis for the trigonometric ratios.
G.3.11 using trigonometric ratios, determine lengths of sides and measures of angles in right triangles.
G.3.12 apply the Pythagorean Theorem and its converse in solving practical problems and in deriving the special right triangle relationships.
G.3.13 investigate measures of angles formed by chords, tangents, and secants of a circle and the relationship to its arcs.
G.3.14 given a polygon, find angle measures of interior and exterior angles; find length of sides from given data; and use properties of regular polygons to find missing data.
G.3.15 develop properties of tessellating figures and use those properties to tessellate the plane.
G.3.16 develop and apply formulas for area, perimeter, surface area, and volume and apply them in the modeling of practical problems.
G.3.17 develop concepts of analytical geometry such as formulas for distance, slope, and midpoint and apply these to finding dimensions of polygons on the coordinate plane.
G.3.18 using various methods, construct a triangle's medians, altitudes, angle and perpendicular bisectors; make conjectures and develop mathematical arguments about their relationships.
G.3.19 using transformational geometry, create a reflection, translation, rotation, glide reflection and dilation of a figure; and apply transformations and use symmetry to analyze mathematical situations.
G.3.20 compare and contrast other geometry to Euclidean geometry.
G.3.21 find or approximate the area of irregularly shaped regions.
G.3.22 using the Cartesian coordinate system, find the dimensions of a polygon, given the coordinates of the polygon.

Algebra II Objectives

Listed below are the objectives for Algebra II. It is an underlying assumption that a mastery of Algebra I has been achieved since Algebra II continues the study of concepts introduced in Algebra. Graphing calculators are an integral part of instruction in the Algebra II objectives. Students will have the opportunity to make conjectures and test them by using any graphing utility. Manipulatives and other available technology will be used as appropriate. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Algebra II Objectives

Students will:

A2.2.1 write equations of lines given various information including parallel and perpendicular lines and vertical and horizontal lines.

A2.2.2 factor higher order polynomials by applying various methods including factoring by grouping and the sum and difference of two cubes.

A2.2.3 define and use i to develop the complex number system; simplify powers and products of i.

A2.2.4 perform basic operations with complex numbers and give answers in simplest form .

A2.2.5 simplify radicals and expressions involving fractional exponents and convert between the two forms .

A2.2.6 solve quadratic equations over the set of complex numbers: apply the techniques of factoring and completing the square and the quadratic formula; use the discriminate to determine the nature of the roots; confirm the solutions numerically and graphically; and apply to practical problems.

A2.2.7 define the components of a matrix: develop and use the appropriate field properties by adding, subtracting, and multiplying; solve a system of linear equations using matrices; and apply skills toward solving practical problems.

A2.2.8 solve equations containing radicals and exponents.

A2.2.9 define a function: find the domain, range, zeros; find the inverse of a function; find the value of a function for a given element in its domain; and perform basic operations on functions including composition of functions.

A2.2.10 explore basic families of functions: recognize linear, quadratic, absolute value, step, and exponential functions; and convert among graphs, tables and equations.

A2.2.11 solve quadratic inequalities and graph their solution sets.

A2.2.12 solve and graph the solution set of systems of linear inequalities in two variables by finding the maximum and minimum values of a function over a region using linear program techniques

A2.2.13 solve practical problems involving direct, inverse, and joint variation.

A2.2.14 explore the conic sections: recognize, identify, and sketch the graphs of a parabola, circle, ellipse, and hyperbola; and convert between graphs and equations.

A2.2.15 solve absolute value equations and inequalities graphically, numerically, and algebraically.

A2.2.16 define a logarithmic function: transform equations from exponential form into logarithmic form; and apply the basic properties of logarithms to simplify or expand an expression.

A2.2.17 perform a quadratic regression and use the results to predict specific values of a variable. Identify the regression equation.

Conceptual Mathematics Objectives

Conceptual Mathematics is a one-year course for students who have successfully completed the objectives for geometry. This course will include major topics from algebra and geometry and will extend these ideas to practical usage. Basic ideas of probability and statistics and the mathematics of finance will also be included. These, along with other ideas, will be presented in the context of their historical development. Students will be encouraged to be active learners either in cooperative groups or as individuals. It is the purpose of this course to expose students to topics in mathematics that are relevant to any educated person. Full integration of graphing calculators and computer applications such as spreadsheets, database, and Internet use, is essential to effectively master the objectives of this course. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:

- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Conceptual Mathematics Objectives
Students will:

CM.2.1 develop a variety of problem solving strategies (e.g., draw a diagram, look for a pattern, and work backwards).
CM.2.2 interpret graphs of functions (i.e., linear, quadratic, exponential).
CM.2.3 solve application problems using linear, quadratic and exponential functions with emphasis on data collection and analysis.
CM.2.4 use appropriate formulas to solve workplace problems.
CM.2.5 calculate costs, simple and compound interest, finance charges, loan payments and taxes.
CM.2.6 compare various methods of investing money.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.3.1 apply concepts of geometry including the Pythagorean Theorem, similar triangles, and right triangle trigonometry.
CM.3.2 solve workplace problems involving perimeter, area, surface area and volume.
CM.3.3 investigate the applications of various geometric shapes and patterns to art, architecture, and nature.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

CM.5.1 relate mathematical content to its historical development.
CM.5.2 integrate other disciplines into the study of mathematics through simulations, research, and projects
CM.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
CM.5.4 apply the basic probability rules in expressing the chances of events occurring using technology when appropriate.

CM.5.5 create and interpret data using various methods of displaying numerical data, including frequency distributions, graphs, histograms, stem-and-leaf plots, and box-and-whiskers plots, using technology when appropriate.
CM.5.6 relate the measures of central tendency and the measures of dispersion to a normal distribution.
CM.5.7 apply the measures of central tendency and the measures of dispersion to workplace situations.
CM.5.8 use statistical tools for workplace applications such as quality control, marketing and predicting trends.

Trigonometry Objectives

Trigonometry is designed for students who have successfully completed Algebra II. Connections between right triangle trigonometry and circular functions should be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in finding the values of the trigonometric functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 3: Geometry (MA.S.3)
Students will:
- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Trigonometry Objectives
Students will:
T.3.1 define the six trigonometric functions in terms of a right triangle and find the values of the functions of an angle in standard position, given a point on the terminal side of the angle. Circular function definitions will be connected with trigonometric function definitions .
T.3.2 find the values of the other trigonometric functions, given the value of one trigonometric function.
T.3.3 develop recall of the values of the six trigonometric functions of special angles as related to the unit circle.
T.3.4 use a calculator to find the values of the trigonometric functions for any angle and to find the measure of an angle given the value of one of its trigonometric functions.
T.3.5 convert angle measures from radians to degrees and vice versa.
T.3.6 verify trigonometric identities by making substitutions and recalling basic identities.
T.3.7 solve trigonometric equations that include both infinite solutions and solutions with a restricted domain.
T.3.8 find the value of inverse trigonometric functions.
T.3.9 find the area of a triangle given the measures of two sides and the included angle or the measures of three sides (Heron's formula).
T.3.10 express complex numbers in polar form: perform operations including adding, subtracting, multiplying, and dividing; evaluate powers and roots of complex numbers using De Moivre's Theorem; and graph complex numbers.
T.3.11 solve practical problems involving triangles using the trigonometric functions, the Pythagorean Theorem, the Law of Sines, and the Law of Cosines.

T.3.12 recognize the graph of the six trigonometric functions. Given an equation in the form of y=aSin(bx+c)+d, identify the domain and range; determine the period, phase shift, amplitude and vertical shift; and sketch at least one period of the graph.
T.3.13 model periodic data sets using graphs, tables, and equations.
T.3.14 recognize and graph the inverse of trigonometric functions. Restrictions on the domain will be included.
T.3.15 develop and use formulas such as sum or difference of two angles, double-angle, and half-angle.
T.3.16 perform mathematical operations with vectors and use vectors to solve practical problems.

Probability and Statistics Objectives

Probability and Statistics is one of the most important branches of the mathematical sciences. Knowledge of these topics is critical to decision-making and to the analysis of data. Using concepts of probability and statistics, individuals are able to predict the likelihood of an event occurring, organize and evaluate data, and identify the significance of statements. Connections between content and applications to the students' world will be emphasized. Graphing utilities such as calculators and computers will be used to enhance student learning and to aid in the solution of practical problems. Prerequisites for this course are successful completion of Algebra II and Geometry. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data; develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Probability and Statistics Objectives
Students will:
PS.5.1 distinguish between experimental and theoretical probability.
PS.5.2 create and interpret data using various methods of displaying circle graphs, histograms, and frequency curves, and make predictions about outliers.
PS.5.3 determine possible outcomes using tree diagrams and the counting principles of permutations and combinations.
PS.5.4 express the chances of events occurring either in terms of a probability or odds.
PS.5.5 use the normal distribution and the binomial distribution including pascal's triangle, to determine probability of events.
PS.5.6 interpret and calculate measures of central tendency (mean, median, and mode) from data presented in a variety of forms such as charts, tables, and graphs or from data created through experimentation.
PS.5.7 interpret and calculate measures of dispersions (range and standard deviation) from data presented in a variety of forms such as charts, tables and graphs or from data created through experimentation.
PS.5.8 describe individual performances in terms of percentiles, z-scores, and t- scores.
PS.5.9 describe the role of sampling, randomness, bias, and sample size in data collection and interpretation.

PS.5.10 explain and illustrate the use and misuse of statistics.
PS.5.11 test the validity of a hypothesis using appropriate statistical concepts.
PS.5.12 determine the correlation values for given data or for data generated by students and use the results to describe the association of the variables within the given data. Identify whether this association is systematic or predictable.
PS.5.13 calculate the Chi-Square values for a given population.
PS.5.14 perform a t-test for a designated set of data, and use the results to test the validity of a hypothesis.
PS.5.15 perform a regression analysis on a set of data, either given or created through experimentation, and use the results to predict specific values of a variable. Identify the regression equation.
PS.5.16 perform an analysis of variance (ANOVA) and interpret the results.

Pre-calculus Objectives

Pre-calculus is intended for students who have mastered the concepts of Algebra II. It will extend students' knowledge of functions as well as provide appropriate preparation for a calculus course. Available technology will be used by students and teachers to enhance learning. Graphing utilities are powerful tools for solving and verifying equations and inequalities. They also aid in investigating functions and their inverses. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 2: Algebra (MA.S.2)
Students will:
- demonstrate understanding of patterns, relations, and functions;
- represent and analyze mathematical situations and structures using algebraic symbols;
- use mathematical models to represent and understand quantitative relationships; and
- analyze change in various contexts

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

Pre-calculus Objectives
Students will:
PC.2.1 investigate and sketch the graphs of polynomials and rational functions using the characteristics of zeros, upper and lower bounds, y-intercepts, symmetry, asymptotes and end behavior, maximum and minimum points and domain and range.
PC.2.2 solve higher order polynomial equations utilizing techniques such as Descartes' Rule of Signs, upper and lower bounds, and Rational Root Theorem.
PC.2.3 expand binomials with positive integral exponents by the use of Pascal's triangle and the Binomial Theorem.
PC.2.4 establish the relationship between exponential and logarithmic functions; graph related functions and include their domain and range.
PC.2.5 solve equations and practical problems involving exponential and logarithmic expressions: include natural and common logarithms; use laws of exponents; and confirm solutions graphically and numerically.
PC.2.6 solve problems involving the sum of finite and infinite sequences and series. Sigma (summation) notation will be included.
PC.2.7 find the limit of a function, a sequence, or a series by graphing, intuitive reasoning, algebraic methods, and numerical substitution.
PC.2.8 perform mathematical operations with vectors and use vectors to solve practical problems.
PC.2.9 apply the method of mathematical induction to prove formulas and statements.

Standard 3: Geometry (MA.S.3)
Students will:

- analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships;
- specify locations and describe spatial relationships using coordinate geometry and other representational systems;
- apply transformations and use symmetry to analyze mathematical situations; and
- solve problems using visualization, spatial reasoning, and geometric modeling

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.3.1 graph functions and conic sections using translation.
PC.3.2 investigate properties and solve practical problems of the conic sections.

Standard 5: Data Analysis and Probability (MA.S.5)
Students will:

- formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them;
- select and use appropriate statistical methods to analyze data;
- develop and evaluate inferences and predictions that are based on models; and
- apply and demonstrate an understanding of basic concepts of probability

through communication, representation, reasoning and proof, problem solving, and making connections within and beyond the field of mathematics.

PC.5.1 perform a regression analysis on a set of data and use the results to predict specific values of a variable. Identify the regression equation.

READING AND ENGLISH LANGUAGE ARTS

The Reading and English Language Arts content standards, objectives and performance descriptors develop in three major strands: 1) reading, 2) writing, 3) listening, speaking and viewing. Each strand provides a clear description of what the student in each grade K-12 should know and be able to do. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a rigorous and challenging program of studies for all students.

References to support the development of the Reading and English Language Arts curriculum include International Reading Association, National Council of Teachers of English, West Virginia Instructional Goals and Objectives, and a multitude of national research. Each reference was reviewed and its relevance was determined in order to produce a solid curriculum for West Virginia students.

Considerations in the development of the Reading and English Language Arts K-12 curriculum included the rigor and challenge that the curriculum would provide students. The curriculum through the grade levels is sequential to allow for foundational content and continues in a spiraling effect in order to ensure a complete mastery of each strand. The Reading and English Language Arts program emphasizes attention to multicultural education, which is particularly evident throughout the reading strand. A crucial component of the curriculum involves use of the language arts across all curriculum disciplines as these skills are essential in comprehending any curricular area.

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

The three major content standards have defined objectives which explain what the student should know. The examples (e.g.) provided with many of the objectives further clarify skills appropriate to that objective. The examples are not intended to be all inclusive but serve as a guide for the mastery of the objective at the particular grade level. The teacher is strongly encouraged to review the objectives of the previous grade level to serve as a starting point for review and maintenance in the sequential, spiraling curriculum.

The content standards, objectives and performance descriptors defined herein will serve to ultimately promote a more literate West Virginia society.

Reading and English Language Arts Content Standards K-12

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Kindergarten Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the kindergarten student will be an immersion in a print-rich environment to develop an awareness and understanding of spoken and written language. This awareness will be explored through reading, writing, listening, speaking and viewing which will begin to develop lifelong learning skills. Appropriate literature and language experience, coupled with active student participation, will support this development. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.K.1.1 identify that words are made of phonemes (c/a/t).
RLA.K.1.2 identify the sounds in a one-syllable word (play = p/l/a).
RLA.K.1.3 recognize and manipulate onset and rime (word families).
RLA.K.1.4 use basic elements of phonetic analysis (e.g., common letter/sound relationships; beginning/ending consonant sounds; short/long vowel sounds; word patterns).
RLA.K.1.5 recognize and name all lower/upper case letters in random order.
RLA.K.1.6 identify level-appropriate sight words and vocabulary words (e.g., color words; number words; positional words - top, bottom, in, out; high frequency words - I, it; words for person, places, things and actions).
RLA.K.1.7 recognize basic comprehension concepts (e.g., main idea; setting; characters; sequence; retelling; predicting).
RLA.K.1.8 recognize that print conveys meaning (e.g., know that printed letters and words represent spoken language).
RLA.K.1.9 recognize how print is organized and read (e.g., front of book; title; hold book correctly; follow words from left to right and top to bottom of page; turn pages left to right; one to one match - print and voice; know the difference between words and letters).
RLA.K.1.10 establish a purpose for reading (e.g., for information, for pleasure).
RLA.K.1.11 identify author's purpose (e.g., to persuade, to inform).
RLA.K.1.12 make connections between literary work and people in own life and other cultures (e.g. characters; events).
RLA.K.1.13 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g. environmental print, written directions; signs; captions; labels; technology).
RLA.K.1.14 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.K.2.1 demonstrate knowledge of conventions of print (e.g., correct directionality; proper writing position; print some upper/lower case letters of the alphabet and numerals 0-9; uniformity in print; write own first and/or last name).

RLA.K.2.2 begin to compose written works using appropriate parts of the writing process (e.g., initial attention to planning and drafting; class and individual publishing).

RLA.K.2.3 use writing and other methods for self-expression (e.g., drawing pictures; using letters or phonetically spelled words; telling; dictating; making lists).

RLA.K.2.4 use a variety of sources to gather information in sharing thoughts and ideas (e.g., pictures; charts; videos; television programs; graphs; computers).

RLA.K.2.5 use conventions of spelling in written compositions (e.g., use letter/sound relationships to spell independently; spell some high frequency words appropriate to grade level).

RLA.K.2.6 use conventions of capitalization in written compositions (e.g., first and last names; first word of sentence; pronouns).

RLA.K.2.7 recognize and use conventions of punctuation in written composition (e.g., period and question mark).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.K.3.1 listen, recite, and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns.

RLA.K.3.2 understand the main idea or message in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

First Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts for the first grade student will be an immersion in a literature-rich environment to develop an awareness of print materials as sources of information and enjoyment. The student will grow in language development through reading, writing, listening, speaking and viewing that will become lifelong skills. First grade students will learn from reading authentic literature such as fiction, non-fiction and poetry that reflects cultures, experiences and ideas. The curriculum will encourage and support active participation by the learner. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.1.1.1 blend or segment the phonemes of most one-syllable words.
RLA.1.1.2 substitute, delete and manipulate beginning and ending phonemes.
RLA.1.1.3 develop a rhythm and rhyme of words (e.g., nursery rhymes; songs; poems; tongue twisters).
RLA.1.1.4 use basic elements of phonetic analysis to decode unknown words (e.g., sound relationships; beginning/ending consonants; vowel sounds; blends).
RLA.1.1.5 use basic elements of structural analysis to decode unknown words (e.g., basic prefixes/suffixes; compound words; root words; spelling patterns; contractions).
RLA.1.1.6 understand level appropriate sight words and vocabulary (e.g., high frequency words such as said, was and where; antonyms - hot, cold; synonyms - rock, stone; multiple meaning words - ball).
RLA.1.1.7 use a variety of context clues to determine word meanings (e.g., prior knowledge; reading ahead).
RLA.1.1.8 recognize basic comprehension concepts (e.g., story elements; main idea; sequence; cause/effect; prediction).
RLA.1.1.9 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.
RLA.1.1.10 explain how print is organized and read (e.g., author; illustrator; difference between letters - words - sentences; aware of the use of capitalization and punctuation as text boundaries).
RLA.1.1.11 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; picture captions; title; cover; story structure; story topic; action; events).
RLA.1.1.12 read with accuracy and comprehension instructional level texts designed for the first grade to use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).
RLA.1.1.13 read aloud familiar stories, poems and passages with fluency and expression (e.g., rhythm, flow, meter, tempo, pitch, tone, intonation) and self-select a variety of literary works.
RLA.1.1.14 establish purpose for reading (e.g., for information; for pleasure; to identify a specific viewpoint).
RLA.1.1.15 make connections in literary work and people in own life and other cultures (e.g., events; characters; conflicts).
RLA.1.1.16 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).
RLA.1.1.17 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.1.2.1 use conventions of print (e.g. correct directionality; proper writing position; print upper/lower case letters of the alphabet and numerals; demonstrate uniformity in print; write own first and last name).
RLA.1.2.2 compose written works using appropriate parts of the writing process (e.g. initial attention to planning; drafting; rereading for meaning; some self correction; class and individual publishing).
RLA.1.2.3 develop a simple story with appropriate sequence (e.g. beginning; middle; end).

RLA.1.2.4 write in a variety of forms or genres (e.g. journal writing; written response to literature; writing poems).

RLA.1.2.5 use a variety of sources to gather information to share thoughts and ideas (e.g. informational books; pictures; charts; indexes; videos; television programs; graphs; computers).

RLA.1.2.6 alphabetize to the first letter.

RLA.1.2.7 use conventions of spelling in written composition (e.g. letter/sound relationships; high frequency words from appropriate grade level list; transition from invented spelling to conventional spelling).

RLA.1.2.8 use conventions of capitalization in written composition (e.g. days of week; months of year; names of people; special places; differentiation between common and proper nouns).

RLA.1.2.9 use conventions of punctuation in written composition (e.g. period; question mark; exclamation mark).

RLA.1.2.10 use the mechanics of grammar in written composition (e.g. nouns; verbs; declarative and interrogative sentences).

RLA.1.2.11 use conventions of complete sentences in written composition (e.g. capitalize first word; include a noun and verb; ending punctuation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.1.3.1 identify the main idea of messages in visual media (e.g. pictures; cartoons; weather reports; newspaper photos; visual narratives.)

RLA.1.3.2 listen, recite and respond to familiar stories, poems, nursery rhymes, songs and stories with repeated patterns (e.g. retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Second Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts second grade students will continue to be immersed in a literature-rich environment to encourage exploration of various literary forms. The student will apply skills of reading, writing, listening, speaking and viewing across the curriculum. Students will be able to read with comprehension to write, speak and listen effectively and to develop both literal and critical thinking skills. Second graders will develop from dependent to independent readers and will begin to make their own choice for recreational and informative reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.2.1.1 use basic elements of phonetic analysis (e.g., syllabication; dipthongs; digraphs; variant vowel sounds such as r-controlled).

RLA.2.1.2 use basic elements of structural analysis to decode unknown words (e.g, syllables; prefixes; suffixes; root words; compound words; spelling patterns; contractions).

RLA.2.1.3 identify and use grade level appropriate sight words and reading vocabulary (e.g., high frequency words; homonyms - I, eye; homophones - read, read; multiple meaning words; synonyms; antonyms).

RLA.2.1.4 use a variety of context clues to decode unknown words (e.g., prior knowledge; read ahead; reread).

RLA.2.1.5 use reading skills and strategies to understand a variety of familiar literary passages and texts (e.g., fairy tales; folk-tales; fiction; nonfiction; poems; legends; fables; fantasies; chapter books).

RLA.2.1.6 use basic comprehension skills to understand a story (e.g., story elements; main idea; sequence; cause/effect; predicting; drawing conclusions; fact or opinion; summarizing; responding creatively to texts).

RLA.2.1.7 respond to both literal and interpretive comprehension questions after reading a short story selection that is developmentally appropriate.

RLA.2.1.8 use meaning clues to aid comprehension and make predictions about content (e.g., pictures; pictures captions; title; cover; heading; story structure; story topic; action; events; character's behavior).

RLA.2.1.9 read with accuracy and comprehension instructional level texts designed for the second grade and use self-correction strategies (e.g., search for cues; identify miscues; reread; ask for help).

RLA.2.1.10 read familiar stories, poems and passages with fluency.

RLA.2.1.11 establish a purpose for reading (e.g., for information; for pleasure; to understand specific viewpoints; to follow directions).

RLA.2.1.12 describe author's purpose (e.g., to persuade, to inform).

RLA.2.1.13 make connections between characters or simple events in a literary work and in own life and other cultures (e.g., events; characters; simple conflicts; themes)

RLA.2.1.14 use reading skills and strategies to understand a variety of informational resources to support literacy learning (e.g., environmental print; written directions; signs; captions; labels; informational books).

RLA.2.2.15 increase amount of independent reading.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.2.2.1 use conventions of print (e.g., maintain proper handwriting position; maintain appropriate position of hand/pencil and paper/desk for the correct transition between manuscript and cursive writing).

RLA.2.2.2 develop a story with proper sequence (e.g., beginning - middle - end containing a main idea and supporting details).

RLA.2.2.3 begin to use the five step writing process (e.g., graphic organizers for pre-writing; descriptive words and details for drafting and revising; use of age appropriate dictionaries for editing and publishing; conferencing to edit: punctuation; capitalization; spelling at developmentally appropriate level).

RLA.2.2.4 use a variety of sources to gather information to communicate with others (e.g., dictionaries; informational book; pictures; charts; indexes; videos; television programs; guest speakers; graphic organizers).

RLA.2.2.5 alphabetize to the second letter and use simple guide words.

RLA.2.2.6 use conventions of spelling in written composition (e.g., spell high frequency words from appropriate grade level list; use letter/sound relationships to spell independently; spell phonetically irregular words - one, could, they; transition from invented to conventional spelling).

RLA.2.2.7 use conventions of capitalization in written composition (e.g., titles; initials; titles of written works; greeting and closing of a letter).

RLA.2.2.8 recognize and use conventions of punctuation in written composition: period (e.g., abbreviations, initials); comma (e.g., dates, greeting/closing of a letter, separate city - state - country, separate items in a list); quotation marks for direct quotes; apostrophe (e.g., contractions, singular possessives).

RLA.2.2.9 use the mechanics of grammar in written composition (e.g., correct subject/verb agreement; simple adjectives and adverbs).

RLA.2.2.10 write correctly formed and punctuated simple sentences (e.g., declarative; interrogative; exclamation).

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.2.3.1 recognize the main idea or intended messages in visual media (e.g., pictures; cartoons; weather reports; newspaper photos; visual narratives).

RLA.2.3.2 listen, recite and respond to familiar stories, poems and songs (e.g., retell in sequence; relate information to own life; describe character - setting - plot; engage in creative and dramatic play; imagine beyond the story).

Third Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts third grade students will learn, practice and apply strategies focusing on preparing literate, independent and self-motivated learners. Students will be engaged in reading and responding to a variety of literature using literal and critical comprehension skills. These learners will develop and, as critical thinkers, take responsibility for their own learning. The student will interact with and respond to text in purposeful situations across the curriculum. Proficiency in reading, writing, listening, speaking and viewing will foster an appreciation for literature and will allow students to make connections between their personal experiences and academic disciplines. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)

Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.3.1.1 recognize level appropriate sight words and content vocabulary.

RLA.3.1.2 recognize level appropriate reading vocabulary (e.g. synonyms, antonyms, homonyms, multi-meaning words).

RLA.3.1.3 use reading skills and strategies to comprehend a variety of literary passages and texts (e.g. fairy tales, folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; historical fiction; biographies; autobiographies; chapter books).

RLA.3.1.4 use comprehension skills to understand a story (e.g. story elements; sequence; expository works; drawing conclusions; compare/contrast; predict; summarize; infer; paraphrase; main idea; story topic).

RLA.3.1.5 recognize the ways in which language is used in literary text (e.g. simile; metaphor; idioms).

RLA.3.1.6 use graphic organizers and visualization techniques to interpret information (e.g. charts; graphs; diagrams).

RLA.3.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g. action; events; story topic; behaviors).

RLA.3.1.8 read with accuracy and comprehension instructional level texts designed for third grade and use self-correction strategies (e.g. search for cues; identify miscues; reread).

RLA.3.1.9 read familiar stories, poems and passages with fluency and expression (e.g. rhythm; flow; meter; tempo; pitch; tone; intonation) and self-select a variety of literary works.

RLA.3.1.10 explain a purpose for reading (e.g. for information; for pleasure; to understand a specific viewpoint).

RLA.3.1.11 recognize author's purpose (e.g. to persuade; to inform).

RLA.3.1.12 compare connections between characters or simple events in a literary work in own life and other cultures (e.g. events; characters; conflicts; themes).

RLA.3.1.13 use reading skills and strategies to identify a variety of informational resources to support literacy learning (e.g. environmental print; written directions; signs; captions; labels; informational books).

RLA.3.1.14 increase amount of independent reading.

Performance Descriptors (RLA.PD.3.1)

- **Distinguished**
  Third grade students performing at the distinguished level read independently above grade level passages/texts to establish a purpose for reading, identify author's purpose, compare connections between characters or simple events in a literary work and use reading skills and strategies to identify a variety of informational resources to support literacy learning.
- **Mastery**
  Third grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify story elements, sequence, expository works, draw conclusions, compare/contrast, predict, summarize, make inferences, paraphrase and recognize author's purpose.
- **Partial Mastery**
  Third grade students performing at the partial mastery level read grade level passages/texts using basic comprehension skills to interpret a story. Students use meaning clues to aid comprehension and make predictions about content; apply self-correction strategies such as searching for cues, identifying miscues, reread, self-question and asking for help.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.3.2.1 demonstrate proper manuscript and full transition to cursive writing techniques (e.g., posture; paper placement; pencil grip; letter formation; slant; letter size; spacing; rhythm; alignment).

RLA.3.2.2 use the five step writing process (e.g., graphic organizers for prewriting; descriptive words and details for drafting and revising; use of simple dictionaries for editing and publishing; conferencing to edit; punctuation; capitalization; and spelling at developmentally appropriate level).

RLA.3.2.3 use paragraph format to write compositions (e.g., beginning - middle - end; main ideas with relevant details; sentence variety - declarative, interrogative; descriptive and transitional words; indentations).

RLA.3.2.4 use a variety of strategies to plan simple research (e.g., identify possible topic by brainstorming; list questions; use idea webs; organize prior knowledge about a topic; develop a course of action for writing; determine how to locate necessary information).

RLA.3.2.5 use a variety of sources to gather information (e.g., use dictionaries; encyclopedias; newspapers).

RLA.3.2.6 alphabetize to the third letter and use simple dictionary skills (e.g., guide words, pronunciation).

RLA.3.2.7 use conventions of spelling in written composition (e.g., spell high frequency words form appropriate grade level list; use letter/sound relationships to spell independently; make structural changes to spell words correctly: spell irregular verbs and irregular plural nouns).

RLA.3.2.8 use conventions of capitalization in written composition (e.g., greeting - heading - closing of a letter; first word of a direct quotation).

RLA.3.2.9 use conventions of punctuation in written composition (e.g., commas in dates and addresses; greeting/closing of a letter; quotation marks around titles and direct quotations; apostrophes for contractions and possessive nouns).

RLA.3.2.10 write a grammatically correct sentence (e.g., correct subject/verb agreement with singular and plural nouns and verbs; correct use of regular and irregular verbs).

RLA.3.2.11 use specific mechanics of grammar in written composition (e.g., substitute pronouns for nouns; use pronoun agreements; adjectives; adverbs).

RLA.3.2.12 write correctly formed sentences avoiding run-on sentences.

Performance Descriptors (RLA.PD.3.2)

- **Distinguished**
  Third grade students performing at the distinguished level write a descriptive composition that details a beginning, middle and ending using advanced language mechanics and grammar, such as a variety of sentence structure, punctuation and capitalization.
- **Mastery**
  Third grade students performing at the mastery level write a descriptive paragraph consisting of a beginning, middle and end using language mechanics and grammar at grade level.
- **Partial Mastery**
  Third grade students performing at the partial mastery level write a three simple sentence paragraph consisting of a beginning, middle and end using beginning capitalization, ending punctuation and subject-verb agreement.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.3.3.1 listen and respond to familiar stories and poems (e.g., summarize and paraphrase to confirm comprehension; recount personal experiences; imagine beyond the literary form).

RLA.3.3.2 define different messages conveyed through visual media (e.g., main ideas and supporting details; facts and opinions; main characters; setting; sequence of events).

Performance Descriptors (RLA.PD.3.3)

- **Distinguished**
  Third grade students performing at the distinguished level listen and respond to stories and poems to paraphrase and experience beyond the literary form. Students analyze the characters, setting and plot to determine the message through visual media.
- **Mastery**
  Third grade students performing at the mastery level listen and respond to familiar stories and poems to summarize and recount personal experiences. Students determine messages through visual media to identify main idea and supporting details, fact and opinion and sequence of events.
- **Partial Mastery**
  Third grade students performing at the partial mastery level listen, recite and respond to familiar stories and poems to retell the story in sequence and relate text to self. Students recognize the main idea or messages in visual media.

Fourth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fourth grade students will develop as readers and writers who are independent, self-motivated and critical thinkers and take responsibility for their own learning. Students will learn to critically evaluate what they read; to express themselves clearly in speaking and writing; to gather and use information through a variety of sources; and to use listening as a reading strategy. Each of these strategies is to be applied in the content areas. At this level, children are provided with a variety of opportunities to interact with a wide range of literary forms, building the foundation for lifelong reading. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.4.1.1 identify level appropriate vocabulary (e.g., multiple meaning words; synonyms; antonyms; homonyms; content area vocabulary; context clues).

RLA.4.1.2 apply structural analysis and context clues to decode and encode words.

RLA.4.1.3 recognize the defining characteristics of a variety of literary forms and genres (e.g., fairy tales; folk-tales; fiction; nonfiction; myths; poems; fables; fantasies; biographies; autobiographies; chapter books).

RLA.4.1.4 use comprehension skills to understand literary works (e.g., summarize; story elements; skim and scan; define expository text; compare/contrast; imagery; paraphrase; compose personal response; infer; fact and opinion; sequence).

RLA.4.1.5 recognize the ways in which language is used in literary texts (e.g., simile; metaphor; idioms; analogies; and puns).

RLA.4.1.6 use graphic organizers and visualization techniques to interpret information (e.g., charts; graphs; diagrams; non-verbal symbols).

RLA.4.1.7 use meaning clues to aid comprehension and make predictions about content across the curriculum (e.g., pictures; picture captions; titles; headings; story structure; story topic; action - events - character behaviors).

RLA.4.1.8 read with accuracy and comprehension instructional level texts designed for the fourth grade and use self-correction strategies (e.g., search for cues; identify miscues; reread).

RLA.4.1.9 read orally and silently literary texts across the curriculum with fluent expression.

RLA.4.1.10 determine a purpose for reading across the curriculum.

RLA.4.1.11 summarize the author's purpose (e.g., to persuade; to inform; to determine a specific viewpoint).

RLA.4.1.12 compare self to text in making connections between characters or simple events in a literary work with people and events in one's own and other cultures.

RLA.4.1.13 increase amount of independent reading.

Performance Descriptors (RLA.PD.4.1)

- **Distinguished**
  Fourth grade students performing at the distinguished level read independently above grade level passages/texts to explain the purpose for reading, identify figurative language, employ meaning clues to aid comprehension and predict content across the curriculum.
- **Mastery**
  Fourth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to scan and skim, identify imagery, compose a response and distinguish fact/opinion.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level read grade level passages/texts to compare self to text and apply pre-reading strategies such as accessing prior knowledge, previewing and setting a purpose.

Standard 2: Writing (RLA.S.2)

Students will employ a wide range of writing strategies to communicate effectively for different purposes by:

- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives

Students will:

RLA.4.2.1 use conventions of print (e.g., legibility; uniformity in all written work).

RLA.4.2.2 use the five step writing process (e.g., focused composition; coherent and logical progression of ideas; correct page format - title - paragraphs - margins - indentations).

RLA.4.2.3 use proper paragraph form in written composition (e.g., indent the first word of a paragraph; use topic sentence; recognize a paragraph as a group of sentences about one main idea; use an introductory and concluding paragraph; write at least two related paragraphs).

RLA.4.2.4 use strategies to gather and record information for research topics (e.g., notes- maps - charts - graphs - tables; summarize - paraphrase - describe in narrative form; gather direct quotes).

RLA.4.2.5 use reference skills to identify words (e.g., alphabetical order, guide words, pronunciation, glossary).

RLA.4.2.6 use strategies to compile information into written reports or summaries (e.g., incorporate notes into a finished product; include simple facts - details - explanations - examples; draw conclusions from relationships and patterns that emerge from data of different sources; use appropriate visual aids and media).

RLA.4.2.7 use conventions of spelling in written composition (e.g., spell high frequency words; spell commonly misspelled words from appropriate grade level list; use dictionary and other resources to spell words; use syllable constructions to spell words; use vowel combinations for correct spelling; use contractions - compound words - roots - suffixes - prefixes in spelling).

RLA.4.2.8 use conventions of capitalization in written composition (e.g., titles of people; proper nouns such as towns - cities - counties - countries - names of streets - holidays; first word of a direct quote; heading - salutation - closing of a letter).

RLA.4.2.9 use conventions of punctuation in written composition (e.g., use colons in business letter salutations; use quotation marks in the title of poems - songs - chapters; underline book titles).

RLA.4.2.10 use a variety of sentence structure correctly in writing (e.g., simple - compound - complex sentences; avoid sentence run-ons and fragments).

RLA.4.2.11 use the mechanics of grammar in written composition (e.g., avoid double negatives; correct verb tenses; use conjunctions - interjections - prepositions; correct subject verb agreement with regular and irregular verbs).

Performance Descriptors (RLA.PD.4.2)

- **Distinguished**
  Fourth grade students performing at the distinguished level write a multiple paragraph composition that displays a focused, coherent and logical progression of ideas; and considers page format, titles, margins and indentations. Students apply advanced language mechanics and grammar such as the rules of capitalization, punctuation and compound complex-sentences.
- **Mastery**
  Fourth grade students performing at the mastery level develop and write a multiple paragraph composition using language mechanics and grammar at grade level.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level write a paragraph with a topic sentence, supporting sentences and a concluding sentence.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)

Students will apply their use of spoken, written and/or visual language to communicate with

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives

Students will:

RLA.4.3.1 listen and respond to different literary forms (e.g., summarize and paraphrase to confirm understanding; recount personal experiences; listen to information and exhibit comprehension; provide reasons in support of opinions; respond to others' ideas).

RLA.4.3.2 define a variety of messages conveyed through visual media (e.g., provide information by observing main concept - details - themes or lessons - viewpoints; recognize intended audience).

Performance Descriptors (RLA.PD.4.3)

- **Distinguished**
  Fourth grade students performing at the distinguished level recognize oral communication and listening skills to relate ideas and details. Students listen and view in order to understand themes or lessons while recognizing the intended audience.
- **Mastery**
  Fourth grade students performing at the mastery level listen and respond to different literary forms to paraphrase, give reasons in support of opinions and respond to other ideas. Students recognize viewpoints and audiences through visual media and provide oral examples.
- **Partial Mastery**
  Fourth grade students performing at the partial mastery level listen and respond to familiar stories and poems to relate personal experiences and summarize details. Students recognize the story elements of visual media.

Fifth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts fifth grade students will expand and strengthen knowledge and abilities learned in earlier grades. Listening, speaking and viewing instruction will prepare students for interaction and expression at school, home, and later, in the work place. Reading comprehension and vocabulary skills will enable students to read at literal, interpretive and critical levels for functional and recreational purposes. The earlier development of the writing process will be strengthened and expanded within and across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:

RLA.5.1.1	identify defining characteristics, build background knowledge and develop reading skills to understand a variety of literary passages and texts by West Virginia, national and international authors (e.g., fiction; nonfiction; myth; poems; fantasies; biographies; autobiographies; science fiction; tall tales; supernatural tales).
RLA.5.1.2	increase amount of independent reading.
RLA.5.1.3	determine main idea and locate supporting details in a literary passage and across the curriculum.
RLA.5.1.4	analyze text to determine time and sequence.
RLA.5.1.5	use comprehension skills (e.g., draw conclusions; predict; use context clues; summarize).
RLA.5.1.6	determine the elements of literature (e.g., characterization; conflict; plot) to construct meaning and recognize author's and/or reader's purpose.
RLA.5.1.7	identify figurative language in text (e.g., hyperbole; alliteration).
RLA.5.1.8	make text connections to self, to other text and to the world.
RLA.5.1.9	identify literary techniques used to interpret literature (e.g., compare/contrast; cause/effect).
RLA.5.1.10	ead types of poetry that use inversion, rhyme and rhythm (e.g., diamante; shape; haiku; limerick; name poems; bio poems; cinquain; and quatrain).
RLA.5.1.11	use resource materials (e.g., dictionary; glossary) to determine the meaning of unknown words or multiple meaning words.
RLA.5.1.12	use denotation to understand meaning.
RLA.5.1.13	use root words, prefixes and suffixes to spell words, change word meanings and generate new words appropriate to grade level.
RLA.5.1.14	spell commonly misspelled and easily confused words from appropriate grade level list.

Performance Descriptors (RLA.PD.5.1)

- **Distinguished**
  Fifth grade students performing at the distinguished level read independently above grade level passages/texts across the curriculum to apply higher order thinking skills such as analyze text, determine elements of literature to construct meaning, draw and justify conclusions, generalize and make judgments.
- **Mastery**
  Fifth grade students performing at the mastery level read independently grade level literary texts using comprehension skills to identify, interpret and evaluate (point of view, conflict, characterization) and to recognize figurative language.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level read grade level passages/texts to connect self to text and identify critical thinking skills such as rephrasing and responding to what is read. Students identify the defining characteristics and use reading strategies to understand informational texts.

Standard 2: Writing (RLA.S.2)
Students will employ a wide range of writing strategies to communicate effectively for different purposes by:
- developing the writing process;
- applying grammatical and mechanical properties in writing; and
- gathering and using information for research purposes.

Writing Objectives
Students will:

RLA.5.2.1	use pre-writing and drafting strategies to generate topics and plan approaches to writing tasks.
RLA.5.2.2	use the writing process to develop a composition that contains specific, relevant details.
RLA.5.2.3	use editing strategies to correct errors in organization, content, usage, capitalization, punctuation and spelling.
RLA.5.2.4	use strategies to write for a specific purpose (e.g., creative; narrative; informative; persuasive).
RLA.5.2.5	use strategies to address specific types of writing (e.g., journal; friendly letter; business letter).
RLA.5.2.6	develop a 3-5 paragraph composition with an introductory paragraph, supporting details paragraph(s) and concluding paragraph.
RLA.5.2.7	use a variety of sentence types (e.g., simple; compound; declarative; exclamatory; imperative; interrogative) avoiding run-on sentences and sentence fragments.
RLA.5.2.8	apply capitalization rules (e.g., abbreviations; titles of people; initials).
RLA.5.2.9	apply punctuation rules (e.g., commas; apostrophes; colons; semicolons; quotation marks).
RLA.5.2.10	write and punctuate simple and compound sentences using conjunctions, interjections and prepositions correctly.
RLA.5.2.11	identify correct pronoun case and pronoun/antecedent agreement.
RLA.5.2.12	identify action, helping and linking verbs while using correct verb tense and subject/verb agreement.
RLA.5.2.13	identify adjectives and adverbs in their comparative and superlative forms.
RLA.5.2.14	organize information by correctly combining subjects, predicates, modifiers and phrases in sentences.
RLA.5.2.15	identify the parts of a book, know their purposes and locate information (e.g., table of contents; index; glossary).
RLA.5.2.16	identify and use traditional reference sources for different types of information (e.g., dictionary; thesaurus; newspaper; telephone directory; recipes; menus; schedules; advertisements; order forms).
RLA.5.2.17	use card catalog, either hard copy or computer database, to locate sources for research/report topics by title, author and/or subject.
RLA.5.2.18	identify and interpret graphic aids (e.g., maps; charts; graphs; tables; timelines).

Performance Descriptors (RLA.PD.5.2)
- **Distinguished**
  Fifth grade students performing at the distinguished level write multiple paragraph compositions for self-selected purposes to include creative, narrative, and informative topics. Students will apply advanced language mechanics and grammar such as complex sentence structure and vivid transitional words.
- **Mastery**
  Fifth grade students performing at the mastery level write multiple paragraph compositions for specific purposes. These include creative, narrative and informative compositions using language mechanics and grammar at grade level.

- **Partial Mastery**
  Fifth grade students performing at the partial mastery level write multiple paragraphs to a specific prompt for a composition. Students apply language mechanics and grammar such as punctuation and capitalization rules and organize information by utilizing compound subjects, predicates, modifiers and phrases.

Standard 3: Listening, Speaking and Viewing (RLA.S.3)
Students will apply their use of spoken, written and/or visual language to communicate with:

- a variety of audiences; and
- for different purposes.

Listening, Speaking and Viewing Objectives
Students will:

RLA.5.3.1 recognize and exhibit oral communication skills (e.g., rate, audience etiquette).
RLA.5.3.2 identify and correct usage errors in oral communication (e.g., word choice; grammar - I have seen, not I have saw).
RLA.5.3.3 deliver recitations.
RLA.5.3.4 relate personal experiences to oral/visual information.
RLA.5.3.5 listen in order to understand a topic (e.g., of a guest speaker; informational video; televised interview; radio news program).
RLA.5.3.6 contribute to group discussions by exhibiting active listening skills.

Performance Descriptors (RLA.PD.5.3)

- **Distinguished**
  Fifth grade students performing at the distinguished level deliver an oral presentation across the curriculum through reports, recitations, dramatization and sequential story retelling. Students exhibit oral communication skills by pitch, tone and rate.
- **Mastery**
  Fifth grade students performing at the mastery level recognize and exhibit oral communication skills and enhance listening comprehension skills by taking notes, organizing and summarizing spoken ideas and details. Students listen in order to understand a topic, purpose and perspective in spoken text.
- **Partial Mastery**
  Fifth grade students performing at the partial mastery level recognize oral communication and listening skills to classify ideas and details. Students listen in order to determine details and story elements in spoken texts.

Sixth Grade Reading and English Language Arts Content Standards and Objectives

Reading and English Language Arts sixth grade students will continue mastery of communication skills. At this level listening, speaking and viewing strategies require students to gather and process oral information and to effectively express themselves in a variety of situations. Reading objectives strive to promote the development of various vocabulary and comprehension skills that advance the acquisition of literal and inferential knowledge of students and foster recreational reading from a variety of genres, authors, media and resources. Emphasis is given to developing writing skills that are error-free and demonstrate mastery in mechanics and usage to communicate ideas effectively. The student will utilize these competencies across the curriculum. West Virginia teachers are responsible for analyzing the benefits of technology for learning and for integrating technology appropriately in the students' learning environment. See the related grade-level Technology Standards and Objectives.

Standard 1: Reading (RLA.S.1)
Students will use skills to read for literacy experiences, read to inform and read to perform a task by:

- identifying and using the dimensions of reading (phonemic awareness, phonics, background knowledge/vocabulary, high frequency words/fluency, comprehension, writing and motivation to read); and
- employing a wide variety of literature in developing independent readers.

Reading Objectives
Students will:
