

**EXECUTIVE SUMMARY
FOR
WEST VIRGINIA BOARD OF EDUCATION POLICY 2520.3
21st CENTURY SCIENCE K-8 CONTENT STANDARDS AND OBJECTIVES
FOR WEST VIRGINIA SCHOOLS**

Policy Number and Title: West Virginia Board Of Education Policy 2520.3: *21st Century Science K-8 Content Standards and Objectives for West Virginia Schools*

Background: Policies 2520 define the content standards and objectives for the programs of study required by Policy 2510 and establish a standardized format for such.

- The original effective date of the policy was July, 1997.
- In October, 2001, a revision of the Policy incorporating the Content Standards and Objectives (CSOs) for Mathematics, Reading and English Language Arts, Science, Social Studies and Technology was presented to the West Virginia Board of Education.
- Policy 2520.3 was placed on public comment and was approved by the Board on December 13, 2001 and became effective on July 1, 2003.

Major Revisions or Reasons for New Policy: A repeal and replace of Policy 2520.3 is being recommended due to the format changes.

- The format of the science CSOs has been redesigned to facilitate easier use by West Virginia educators.
- The science CSOs have been revised to
 - reorganize the science content under three standards,
 - incorporate higher levels of critical thinking skills and problem solving skills,
 - establish an improved alignment with national assessments (NAEP, ACT, and SAT), and
 - incorporate 21st century knowledge and skills that West Virginia students will need to be successful in the global world of the 21st century.

Impact:

- Students will be better prepared for success on national assessments, in postgraduate studies and in the workplace of the 21st century.
- Students will acquire a higher level of critical thinking and problem solving skills needed for success in post graduate studies and the workplace of the 21st century.
- The revised format will better enable West Virginia educators to focus instruction on the approved CSOs.

TITLE 126
LEGISLATIVE RULE
BOARD OF EDUCATION

FILED

2006 OCT -4 P 3:36

SERIES 44C

21st CENTURY SCIENCE K-8 CONTENT STANDARDS AND OBJECTIVES FOR WEST VIRGINIA SCHOOLS (2520.3)

SECRETARY OF STATE

§126-44C-1. General.

1.1. Scope. -- West Virginia Board of Education Policy 2510 provides a definition of a delivery system for, and an assessment and accountability system for, a thorough and efficient education for West Virginia public school students. Policy 2520.1 defines the content standards (or instructional goals) and objectives for the science as required by W.Va. 126CSR42 (Policy 2510).

1.2. Authority. -- W.Va. Constitution, Article XII, §2, W. Va. Code §18-2-5 and §18-9A-2.

1.3. Filing Date. --

1.4. Effective Date. --

1.5. Repeal of former rule.-- This legislative rule repeals and replaces W. Va. 126CSR44C "Science Content Standards and Objectives for West Virginia Schools (2520.3)" filed February 25, 2003 and effective July 1, 2003.

§126-44C-2. Purpose.

2.1. This policy defines the content standards (or instructional goals) and objectives

for the program of study required by Policy 2510 in science.

§126-44C-3. Incorporation by Reference.

3.1. A copy of 21st Century Science Content Standards and Objectives for West Virginia Schools is attached and incorporated by reference into this policy. Copies may be obtained in the Office of the Secretary of State and in the West Virginia Department of Education, Office of Instructional Services.

§126-44C-4. Summary of the Content Standards and Objectives.

4.1. The West Virginia Board of Education has the responsibility for establishing high quality standards pertaining to all educational standards (W.Va. Code §18-9A-22). The content standards and objectives provide a focus for teachers to teach and students to learn those skills and competencies essential for future success in the workplace and further education. The document includes content standards for science, an explanation of terms, objectives that reflect a rigorous and challenging curriculum, and performance descriptors.

West Virginia Department of Education

West Virginia Board of Education Policy 2520.3
21st Century Science K-8 Content Standards and
Objectives for West Virginia Schools

Steven L. Paine
State Superintendent

Foreword

A 21st century science curriculum is an increasingly important component in the development learners prepared for success in the 21st century. Thus, the West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520.3, 21st Century Science K-8 Content Standards and Objectives for West Virginia Schools. The West Virginia Science Standards for 21st Century Learning includes 21st century *content* standards and objectives as well as 21st century standards and objectives for *learning skills* and *technology tools*. This broadened scope of science curriculum is built on the firm belief that quality engaging instruction must be built on a curriculum that triangulates rigorous 21st century content, 21st century learning skills and the use of 21st century technology tools.

Committees of educators from across the state convened to revise the content standards and objectives. The overarching goal was to build a rigorous, relevant and challenging science curriculum that would prepare students for the 21st century. West Virginia educators, including regular classroom teachers, special education teachers, and teachers representing higher education institutions played a key role in shaping the content standards to align with national standards, rigorous national assessments, and research and best practice in the field of science education. The contribution of these professionals was critical in creating a policy that is meaningful to classroom teachers and appears in a format that can easily be used and understood.

Policy 2520.3 is organized around the three major components of a standards-based curriculum: learning standards, instructional objectives and performance descriptors. The learning standards are the *broad descriptions* of what *all* students must know and be able to do at the conclusion of the instructional sequence. The accompanying grade-level objectives are specific descriptors of knowledge, skills and attitudes that when mastered will enable the student to attain the standard. The instructional objectives guide instructional *planning* and provide a basis for determining appropriate *assessments, instructional strategies and resources*. The performance descriptors provide the basis for *assessing* overall student competence of grade level standards. The performance descriptors define the five student performance levels ranging from novice to distinguished. With the ultimate goal of “learning for all,” these descriptors allow the teacher, students and parents to judge the *level* of student proficiency in each 21st century learning standard.

In combination, the use of learning standards, instructional objectives and performance descriptors become a comprehensive guide for delivering a rigorous and relevant science curriculum to all West Virginia students. These elements, when used to guide the instructional process and when delivered with the creativity and instructional expertise of West Virginia teachers, will become a powerful resource for preparing students to meet the challenges of the 21st century.

Steven L. Paine
State Superintendent of Schools

Explanation of Terms

Content Standards are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. West Virginia has designed five performance levels: distinguished, above mastery, mastery, partial mastery and novice. Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills students need to acquire. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Numbering of Standards

The number for each content standard is composed of four parts, each part separated by a period:

- the content area code is SC for Science,
- the letter S, for Standard,
- the grade level and
- the standard number.

Illustration: SC.S.4.1 refers to fourth grade science content standard #1.

Numbering of Objectives

The number of each objective is composed of five parts, each part separated by a period:

- the content area code (SC for Science),
- the letter O is for Objective,
- the grade level,
- the number of the content standard addressed, and
- the objective number.

Illustration: SC.O.6.2.3 refers to a science sixth grade objective that addresses standard #2 in science, and that is the third objective listed under that standard.

Numbering of Performance Descriptors

The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- the content area (SC for Science),
- the letters PD are for Performance Descriptors,
- the grade level, and
- the standard number.

Illustration: SC.PD.6.2 refers to science performance descriptors for sixth grade, content standard 2.

Unique Electronic Numbers (UENs)

Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520.3 is available on the Web, each standard, each objective, and each group of five performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520.3 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520.3 is approved by the State Board of Education.

The prefix for the UENs for each content area in Policy 2520.3 is noted at the top of each page containing standards, objectives and performance descriptors. As sections of 2520.3 are revised, UENs will be changed to reflect the new approval date.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for fifth grade science standard #2 will be "200602.SC.S.5.2".

SCIENCE – POLICY 2520.3

The K-8 science content standards identify what students should know, understand and be able to do in the natural sciences throughout the eighth grade. Because each content standard utilizes the knowledge and skills of other standards, they are designed to be used as an integrated whole. Although material can be added to the content standards, using only a subset of the standards will leave gaps in the students' scientific literacy.

A three-dimensional instructional strategy model must be utilized to address the science curriculum and assure students' depth of understanding and breadth of knowledge. That model uses the nature, content and application of science concepts to develop scientific inquiry and reasoning skills in students.

Standard 1: Nature of Science

The study of science as a human endeavor provides for the acquisition of ideas leading toward the current knowledge base that represents science content. The nature of science encompasses the basic values and beliefs that make up the scientific world view, how scientists go about their work and the general culture of scientific enterprise. Studying historical and current discoveries of scientists and scientific milestones provides students with information about how discoveries have influenced current scientific thought and advancements. Students should understand that the continuous development of scientific knowledge shapes history. The study of the history and nature of science clarifies scientific inquiry and the role of science in the development of world cultures. Students will engage in active inquiry through investigations and hands-on activities a minimum of 50% of the instructional time. Developing scientific literacy requires a learning environment in which students actively participate in meaningful hands-on activities while developing current technology skills. These investigations explore the natural world, require critical thinking and develop process skills. Learning activities are sequenced to shape, modify and develop students' knowledge in order for them to become independent inquirers.

Standard 2: Content of Science

Science subject matter focuses on the scientific facts, concepts, principles, theories and models that are important for all students to know, understand and apply. Through the integration of the fields of science and the development of unifying themes, students will understand the interrelationships among biology, chemistry, physics and the earth sciences. Scientifically literate students will make connections in the formal education setting and will apply their knowledge and skills to daily life experiences. The objectives describe the specific subject matter/concepts that students are to master at each grade level.

Standard 3: Application of Science

Broad unifying themes complement the perspectives presented in the other content standards. These themes are fundamental to understanding and unifying the various science disciplines. Major unifying themes are systems, models and changes. Scientific design and application permits the extension of senses, the enhancement of the knowledge base, transportation of materials and information, synthesizing of new products and the modification of the world. Students must learn to use technology to analyze situations, gather relevant information, generate and evaluate creative ideas, pose tangible solutions and communicate their analyses, results and suggestions concisely. The need to adapt to the rapid changes that are likely to occur in the future makes it imperative that students develop a broad spectrum of technology-related skills and an openness to change. Applying science and technological innovations to personal and social issues such as health, populations, resources and

environment helps students to develop decision-making skills. As students expand their conceptual horizons, they should recognize that collective individual actions manifest as societal issues. Students must recognize that society cannot afford to deal only with symptoms; personal and societal actions must be focused on elimination of the causes of problems. Students should recognize that unless imposed by legislation social change involves negotiation among different interest groups. Students must be allowed to encounter and examine social change in a variety of current and historical contexts.

The Role of Technology

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning and provide the ability to adapt to change. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

Organization of the Science Program of Study

The West Virginia Science Program of Study is drawn from the National Science Education Standards and the Project 2061 Benchmarks to promote a rigorous and challenging science curriculum. Through experiencing a spiraling, inquiry-based program of study, students in grades K-10 will develop foundational knowledge and skills in the physical sciences, the life sciences, and the earth and space sciences. To assure scientific literacy for all students, a coordinated, integrated approach is utilized in grades K-10. Students in the 10th, 11th and 12th grades participate in advanced in-depth laboratory-based elective courses designed to expand their conceptual understanding and enhance their research and laboratory skills.

Kindergarten Science Content Standards and Objectives

The Kindergarten Science objectives emphasize the process skills. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy and the use of 21st century skills in the physical sciences, the life sciences and the earth and space sciences. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Kindergarten Science enhances the child's natural curiosity about the environment and augments the awe and wonder of inquiries and discoveries using the senses and by hands-on manipulation of objects to build a strong foundation of concepts blended with safety principles. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Kindergarten Science Standard Nature of Science		Students will			
SC.S.K.1		<ul style="list-style-type: none"> demonstrate an understanding of the history and nature of science as a human endeavor encompassing the contributions of diverse cultures, scientists, and careers. demonstrate the abilities and understanding necessary to do scientific inquiry. demonstrate the ability to think and act as scientists by engaging in active inquiries and investigations, while incorporating hands-on activities. 			
Performance Descriptors SC.PD.K.1					
Distinguished					
Kindergarten students at the distinguished level ask questions about themselves and their world and search for answers; use safety techniques; identify and describe unknown objects or events using their senses or scientific instruments.	Above Mastery Kindergarten students at the above mastery level ask questions about themselves and others; use safety techniques; compare and contrast objects or events using their senses or scientific instruments.	Mastery Kindergarten students at the mastery level ask questions about themselves and their world; use safety techniques; explore and describe objects and events using their senses and scientific instruments.	Partial Mastery Kindergarten students at the partial mastery level ask questions about themselves and their world; describe objects or events by using their senses or scientific instruments safely.	Novice Kindergarten students at the novice level ask questions about themselves; identify objects or events using their senses or scientific instruments safely.	
Objectives					
SC.O.K.1.1	Students will ask questions about themselves and their world.				
SC.O.K.1.2	listen to and discuss stories about the lives and discoveries of scientists.				
SC.O.K.1.3	demonstrate curiosity, initiative and creativity by asking questions about the environment noting patterns and variations of natural				

	objects (e.g., trees, leaves, or animal structures). explore and describe objects and events using the five senses to develop observational skills and make predictions based on personal observation.
SC.O.K.1.4	
SC.O.K.1.5	use scientific instruments and everyday materials to investigate the natural world (e.g., hand lens, balance, or magnets).
SC.O.K.1.6	use safe and proper techniques for handling, manipulating and caring for science materials (e.g., follow safety rules, maintain a clean work area, or treat living organisms humanely).
SC.O.K.1.7	collect and record information in a variety of ways (e.g., drawings, weather calendar, or graphs).

Kindergarten Science Content of Science	
Students will	
SC.S.K.2	<ul style="list-style-type: none"> demonstrate knowledge, understanding and applications of scientific facts, concepts, principles, theories and models as delineated in the objectives. demonstrate an understanding of the interrelationships among physics, chemistry, biology and the earth and space sciences. apply knowledge, understanding and skills of science subject matter/concepts to daily life experiences.

Performance Descriptors SC.K.PD.2				
Distinguished	Above Mastery	Mastery	Partial Mastery	Novice
Kindergarten students at the distinguished level compare and contrast living and nonliving things; describe life cycles of living organisms and their rate of growth; develop a classification system to sort objects; recognize that water can change states; demonstrate properties of magnetism; compare force and motion of objects; record weather changes and the effect on living things; investigate properties of soil.	Kindergarten students at the above mastery level distinguish between living and nonliving things; compare life cycles of organisms; classify objects; describe solids, liquids and gases; classify objects as magnetic or nonmagnetic; describe changes in an object's motion and energy; compare weather over time; compare land and water features.	Kindergarten students at the mastery level identify living and nonliving things; describe changes in plants and animals and their environment; sort and group objects; identify solids and liquids; explore magnetic properties, motion and changes in energy; identify celestial objects and changes in weather; compare differences in earth materials.	Kindergarten students at the partial mastery level identify living and nonliving things; list changes in plants and animals; sort objects according to a scheme; name a solid and a liquid; recognize that some objects are magnetic; identify changes in motion and energy; observe daily changes in weather; identify earth materials.	Kindergarten students at the novice level name a living and nonliving thing; observe plants and animals in the environment; identify colors; name a solid or liquid; examine a magnet; differentiate between fast and slow; identify the sun and moon; observe earth materials.
Students will				
using the five senses, identify living and non-living things.				
Objectives				
SC.O.K.2.1				

SC.O.K.2.2	observe and describe the movement, growth and changes in plants and animals.
SC.O.K.2.3	observe and describe models of plants and animals in different environments (e.g., terrariums, aquariums, animals and plants in a forest, pond, or field).
SC.O.K.2.4	describe, compare, sort and group objects in terms of what they are made of (e.g., clay, cloth, paper, or metal) and their physical properties of size, shape, color, weight or texture.
SC.O.K.2.5	identify liquids and solids.
SC.O.K.2.6	identify colors.
SC.O.K.2.7	explore and describe changes in energy (e.g., hot/cold or light/dark).
SC.O.K.2.8	explore and discuss magnetic properties of objects.
SC.O.K.2.9	explore and state different ways objects can be moved (e.g., straight, circular, fast, or slow).
SC.O.K.2.10	observe and record daily changes in weather (e.g., clouds or air temperature).
SC.O.K.2.11	identify objects in the day and night sky (e.g., moon, stars, or sun).
SC.O.K.2.12	observe and compare differences in earth materials.

Kindergarten Standard 3: Application of Science	Kindergarten Science
SC.S.K.3	<p>Students will</p> <ul style="list-style-type: none"> • recognize models as representations of real things. • observe that changes occur gradually, repetitively, or randomly within the environment. • listen and be tolerant of different viewpoints while working in collaborative groups. • observe and identify the use of tools and appliances in everyday life.

Performance Descriptors SC.PD.K.3	
Distinguished	Above Mastery
Kindergarten students at the distinguished level when given a sample, construct a model; describe changes that occur within the environment; be tolerant of different viewpoints while working in a group; choose an appropriate tool or appliance to accomplish a specified task.	Kindergarten students at the above mastery level recognize and use models as representations of real things; describe changes that occur within the environment; be tolerant of different viewpoints while working in a group; describe the use of a tool or appliance in everyday life.
Objectives	Students will
SC.O.K.3.1	recognize that models are representations of real things.

Novice	Partial Mastery
Kindergarten students at the novice level recognize models of real things; talk about changes that occur in the environment; be tolerant of different viewpoints while working in a group; name a tool or appliance.	Kindergarten students at the partial mastery level recognize models as representations of real things; name a change that occurs within the environment; be tolerant of different viewpoints while working in a group; identify tools or appliances in everyday life.

Mastery	Kindergarten students at the mastery level recognize models as representations of real things; observe and identify changes that occur within the environment; be tolerant of different viewpoints while working in a group; observe and identify the use of tools and appliances in everyday life.
---------	---

SC.O.K.3.2	observe and point out that change occurs gradually, repetitively, or randomly within the environment.
SC.O.K.3.3	observe and identify the uses of tools and appliances at home and at play.
SC.O.K.3.4	work in groups, listen to and be tolerant of different viewpoints.

First Grade Science Content Standards and Objectives

The First Grade Science objectives build on the process skills and add data gathering and reporting. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy and the use of 21st century skills in the fields of biology, chemistry, physics, and earth and space sciences. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes, and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated in all activities. First Grade Science continues the excitement of learning about the natural world and allows the beginning of experimentation and data collection to emphasize the tools of science and the properties of matter. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Performance Descriptors SC.PD.1.3					
	Distinguished	Above Mastery	Mastery	Partial Mastery	Novice
	First grade students at the distinguished level describe and identify how parts of a system interact; construct and describe a model; compare and contrast natural and man-made objects; demonstrate tolerance of different points of view; engage and involve the community in conservation practices.	First grade students at the above mastery describe and identify how parts of a system interact; construct a model as representations of real things; classify man-made and natural items; demonstrate tolerance of different points of view; engage in conservation practices.	First grade students at the mastery level identify how parts of a system interact; recognize and use models as representations of real things; distinguish between natural and man-made objects; demonstrate tolerance of different points of view; engage in conservation practices.	First grade students at the partial mastery level list parts of a system; recognize and use models; name a natural and a man-made object; work in collaborative groups; list conservation practices.	First grade students at the novice level name a system; recognize models; name a natural or man-made object; name a conservation practice.
Objectives Students will					
SC.O.1.3.1	identify that systems are made of parts that interact with one another.				
SC.O.1.3.2	use models as representations of real things.				
SC.O.1.3.3	distinguish between natural and man-made objects.				
SC.O.1.3.4	listen to and be tolerant of different viewpoints while working in collaborative groups.				
SC.O.1.3.5	develop respect and responsibility for the environment by engaging in conservation practices (e.g., recycling, or trash clean-up).				

Second Grade Science Content Standards and Objectives

The Second Grade Science objectives build upon the early stages of experimentation and maintenance of natural curiosity. Through a spiraling, inquiry-based program of study and the use of 21st century skills, all students will demonstrate scientific literacy in the fields of biology, chemistry, physics and earth and space sciences. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated in all activities. Second Grade Science will provide opportunities for developmental and academic growth. The activities will introduce the concept that science and technology are interrelated. The curricular thrust will be to develop early problem-solving skills through observation, experimenting and concluding. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade 2 Science		Standard 1: Name of Science	
SC.S.2.1	Students will <ul style="list-style-type: none"> demonstrate an understanding of the history and nature of science as a human endeavor encompassing the contributions of diverse cultures, scientists, and careers. demonstrate the abilities and understanding necessary to do scientific inquiry. demonstrate the ability to think and act as scientists by engaging in active inquiries and investigations, while incorporating hands-on activities. 		
Performance Descriptors SC.PD.2.1			
Distinguished	Above Mastery	Mastery	Partial Mastery
Second grade students at the distinguished level interview people in scientific careers; design and conduct investigations using safe techniques, draw conclusions and present their findings.	Second grade students at the above mastery level relate science careers to their role in the community; design and conduct simple investigations using safe techniques and draw conclusions from collected data.	Second grade students at the mastery level identify and discuss science careers in their community; design and conduct simple investigations using safe techniques; describe trends of data and make predictions; use scientific tools.	Second grade students at the novice level list careers in science; observe simple investigations and view data collected; identify scientific tools.
Objectives	Students will		
SC.O.2.1.1	interpret science as the human's search for an understanding of the world by asking questions about themselves and their world.		

SC.O.2.1.2	compare the lives and discoveries of scientists of different cultures and backgrounds.
SC.O.2.1.3	identify and discuss science careers in the community.
SC.O.2.1.4	demonstrate curiosity, initiative and creativity by observing, classifying, comparing and analyzing natural objects in the environment.
SC.O.2.1.5	manipulate scientific instruments and everyday materials to investigate the natural world (e.g., hand lens, balance, thermometer, metric ruler, magnets, weather instruments, or calculators).
SC.O.2.1.6	measure the length and width of various objects using standard and non-standard units (e.g., metric ruler, paper clips, or counting beads).
SC.O.2.1.7	use safe and proper techniques for handling, manipulating, and caring for science materials (e.g., follow safety rules, maintain a clean work area, or treat living organisms humanely).
SC.O.2.1.8	design and conduct simple investigations; observe, collect and record information using a variety of classification systems; describe trends of data; and make predictions based on that data (e.g., seasonal changes and plants or temperature and weather).

Grade 2: Second Grade Science	
Standard 2: Content of Science	
SC.S.2.2	Students will <ul style="list-style-type: none"> demonstrate knowledge, understanding and applications of scientific facts, concepts, principles, theories, and models as delineated in the objectives. demonstrate an understanding of the interrelationships among physics, chemistry, biology and the earth and space sciences. apply knowledge, understanding and skills of science subject matter/concepts to daily life experiences.

Performance Descriptors SC.PD.2.2				
Distinguished	Above Mastery	Mastery	Partial Mastery	Novice
Second grade students at the distinguished level relate various structures and functions of different plants and animals; compare and contrast various life cycles of plant and animals; explain the differences in organisms that live in various habitats; compare and contrast the changes in states of matter; predict the properties of light, heat, and magnetism; predict motion when force is	Second grade students at the above mastery level compare and contrast structures of plant and animals; construct diagrams to represent life cycles of various plants and animals; predict the organisms that would live in a habitat; explain the changes in each state of matter; investigate properties of light, heat, and magnetism; explain the effects of force verses motion and the changes in	Second grade students at the mastery level identify and explain various structures and functions in plants and animals; sequence illustrations of plant and animal life cycles and relate them to the human life cycle; compare and contrast habitats; identify physical properties and changes of matter; identify and demonstrate properties of light, heat, and magnetism; explore sound	Second grade students at the partial mastery level identify various structures of plant and animals; describe life cycles of plants and animals and different habitats; identify physical properties of matter; identify the properties of light, heat, and magnetism; explore the motion of objects; identify the changes in the earth and sky; explain how fossils form.	Second grade students at the novice level name structures of plants and animals; identify plant and animal life cycles; list habitats; name a physical property of matter; recognize properties of light, heat, and magnetism; describe an object's motion; describe daily weather changes; identify a fossil.

applied; design an experiment to show variable pitch; predict changes in the earth and sky; examine and classify fossils.	pitch and volume; compare and contrast the changes on earth and in the sky; describe and correlate fossils to original organisms.	and compare the force and motion of objects; observe, identify and explain the changes in earth and the sky; describe and correlate fossils to original organisms.	
Objectives	Students will		
SC.O.2.2.1	identify that plants and animals have different structures.		
SC.O.2.2.2	identify the structures of living things including their systems, and explain their functions (e.g., wings for flying, fins for swimming, or roots for support and obtaining water).		
SC.O.2.2.3	sequence pictures of events to illustrate the changes in the life cycle of plants and animals.		
SC.O.2.2.4	relate observations of the butterfly's life cycle to student's own growth and change.		
SC.O.2.2.5	compare and contrast simple models of different kinds of habitats, including a forest and a stream.		
SC.O.2.2.6	identify materials as a solid, a liquid or a gas and recognize that matter takes up space, and can change from one state to another.		
SC.O.2.2.7	demonstrate that a magnet can attract or repel objects.		
SC.O.2.2.8	identify which materials and colors conduct heat better than others.		
SC.O.2.2.9	demonstrate that a shadow is cast when an object blocks light.		
SC.O.2.2.10	compare the effects of force on the motion of an object.		
SC.O.2.2.11	explore how sound can change in pitch and volume.		
SC.O.2.2.12	identify and examine changes in the earth's surface (e.g., weathering, or erosion).		
SC.O.2.2.13	identify the effects of wind movement.		
SC.O.2.2.14	observe and describe different types of precipitation.		
SC.O.2.2.15	describe daily and seasonal weather changes.		
SC.O.2.2.16	explain how the rotation of the Earth on its axis causes day and night.		
SC.O.2.2.17	understand that the moon has phases.		
SC.O.2.2.18	describe how fossils are formed, and match a fossil, or a picture of a fossil, to its original organism.		

Grade 2	Second Grade Science
Standard 3	Application of Science
SC.S.2.3	<p>Students will</p> <ul style="list-style-type: none"> • identify how the parts of a system interact. • recognize and use models as representations of real things. • observe that changes occur gradually, repetitively, or randomly within the environment. • recognize that common objects and events incorporate science to solve human problems and enhance the quality of life. • demonstrate the ability to listen to, be tolerant of, and evaluate the impact of different points of view on health, population, resources and environmental practices while working in collaborative groups.

Performance Descriptors SC.PD.2.3

SC.O.2.3.5	listen to and be tolerant of different viewpoints while working in collaborative groups.				
SC.O.2.3.6	develop respect and responsibility for the environment by engaging in conservation practices (e.g., recycling, trash clean-up, or power consumption reduction).				

Third Grade Science Content Standards and Objectives

The Third Grade Science objectives build upon problem-solving and experimentation and move into a more in-depth study of science. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy in the fields of biology, chemistry, physics and earth and space sciences. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes, and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated in all activities. Third Grade Science highlights science-related careers. The study of geology and astronomy expands in Third Grade Science. Collecting materials, testing the materials, recording data and developing concepts related to physics and chemistry are introduced to expand investigative abilities that lead to logical conclusions. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

<p>SC.0.4.2.4</p>	<p>compare and sequence changes in cycles in relation to plant and animal life.</p>			
<p>SC.0.4.2.5</p>	<p>give examples how plants and animals closely resemble their parents and that some characteristics are inherited from the parents and others result from interaction with the environment.</p>			
<p>SC.0.4.2.6</p>	<p>identify human uses of plants and animals (e.g., food sources, or medicines).</p>			
<p>SC.0.4.2.7</p>	<p>describe the effects of altering environmental barriers on the migration of animals.</p>			
<p>SC.0.4.2.8</p>	<p>construct and explain models of habitats, food chains, and food webs.</p>			
<p>SC.0.4.2.9</p>	<p>investigate how properties can be used to identify substances.</p>			
<p>SC.0.4.2.10</p>	<p>design an experiment to investigate the dissolving of solids and analyze the results.</p>			
<p>SC.0.4.2.11</p>	<p>examine simple chemical changes (e.g., tarnishing, rusting, or burning).</p>			
<p>SC.0.4.2.12</p>	<p>explain that materials including air take up space and are made of parts that are too small to be seen without magnification.</p>			

SC.0.4.2.13	differentiate changes in states of matter due to heat loss or gain.
SC.0.4.2.14	investigate variables that affect the rate of evaporation of a liquid.
SC.0.4.2.15	compare and classify liquids based on density.
SC.0.4.2.16	identify different forms of energy and describe energy transformations that occur between them (e.g., electrical to heat, or radiant to chemical).
SC.0.4.2.17	examine types and properties of waves (e.g., transverse, longitudinal, frequency, or wavelengths).
SC.0.4.2.18	investigate static electricity and conductors/nonconductors of electricity.
SC.0.4.2.19	construct simple electrical circuits.
SC.0.4.2.20	describe and explain the relationship between a compass and a magnetic field.
SC.0.4.2.21	relate motion of an object to its frame of reference.
SC.0.4.2.22	predict and investigate the motion of an object if the applied force is changed.
SC.0.4.2.23	explore that sounds are produced by vibrating objects and columns of air and form conclusions about the relationship between frequency and pitch of sound.
SC.0.4.2.24	investigate the change in the length, tension, or thickness of the vibrating object on the frequency of vibration (e.g., string, wire, or rubber band).
SC.0.4.2.25	examine the geologic time scale.
SC.0.4.2.26	locate and identify patterns of stars and their change in location throughout the year.
SC.0.4.2.27	compare and explain the relative time differences to erode materials.
SC.0.4.2.28	investigate the cause and effects of volcanoes, earthquakes and landslides.
SC.0.4.2.29	interpret a weather chart or map and predict outcomes.
SC.0.4.2.30	identify the sun as a star.
SC.0.4.2.31	explain the effects of alignment of earth, moon and sun on the earth.
SC.0.4.2.32	describe and explain the planets orbital paths.
SC.0.4.2.33	differentiate between types of rock and describe the rock cycle.
SC.0.4.2.34	compare ocean water and fresh water.
SC.0.4.2.35	investigate soil types and soil composition.

Grade 4	Science
Standard 3:	Application of Science
SC.S.4.3	<p>Students will</p> <ul style="list-style-type: none"> • identify how the parts of a system interact. • recognize and use models as representations of real things. • observe and identify patterns of change, consistency or regularity within the environment. • demonstrate the ability to utilize technology to gather and organize data to communicate designs, results and conclusions. • identify that a solution to a problem often creates new problems. <p>Demonstrate the ability to listen to, be tolerant of, and evaluate the impact of different points of view on health, population,</p>

resources and environmental practices while working in collaborative groups.				
Performance Descriptors SC.PD.4.3				
Distinguished	Above Mastery	Mastery	Partial Mastery	Novice
<p>Fourth grade students at the distinguished level explain how parts of a system interact; construct and explain a model that represents an abstract idea; predict patterns of change within the environment; apply technology to solve problems, gather and communicate data; demonstrate tolerance of different points of view, and the willingness to modify ideas when new and valid information is presented.</p>	<p>Fourth grade students at the above mastery level describe and identify how parts of a system interact; construct a model; observe and identify patterns of change, consistency or regularity within the environment; apply technology to solve problems, gather and communicate data; demonstrate tolerance of different points of view.</p>	<p>Fourth grade students at the mastery level identify how parts of a system interact; recognize and create models as representations of real things; observe and identify patterns of change, consistency or regularity within the environment; apply technology to solve problems, gather and communicate data; demonstrate tolerance of different points of view.</p>	<p>Fourth grade students at the partial mastery level identify parts of a system; recognize and use models; list patterns of change within the environment; gather and communicate data using technology; work in collaborative groups.</p>	<p>Fourth grade students at the novice level identify a system; recognize models; list changes within the environment; gather and communicate data using technology.</p>
Objectives	Students will			
SC.0.4.3.1	identify that systems are made of parts that interact with one another.			
SC.0.4.3.2	create models as representations of real things.			
SC.0.4.3.3	observe that changes occur gradually, repetitively, or randomly within the environment and question causes of change.			
SC.0.4.3.4	given a set of objects, group or order the objects according to an established scheme.			
SC.0.4.3.5	given a set of events, objects, shapes, designs, or numbers, find patterns of constancy or regularity.			
SC.0.4.3.6	identify and explain a simple problem or task to be completed; identify a specific solution; and list task requirements.			
SC.0.4.3.7	use an appropriate engineering design to solve a problem or complete a task.			
SC.0.4.3.8	recognize that a solution to one scientific problem often creates new problems (e.g., recycling, pollution, conservation, waste disposal, or need for technology).			
SC.0.4.3.9	listen to and be tolerant of different viewpoints by engaging in collaborative activities and modifying ideas when new and valid information is presented from a variety of resources.			
SC.0.4.3.10	describe the positive and negative consequences of the application of technology on personal health and the environment.			
SC.0.4.3.11	develop respect and responsibility for the environment by engaging in conservation practices.			

Fifth Grade Science Content Standards and Objectives

The Fifth Grade Science objectives identify, compare, classify and explain our living and designed worlds. Through a spiraling, inquiry-based program of study all students will demonstrate scientific literacy and the use of 21st century skills in the fields of biology, chemistry, physics, and earth and space sciences. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes and models. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated in all activities. Fifth Grade Science reviews earth and the sky, life cycles and habitats of organisms, properties, positions and motions of objects and energy. New major concepts introduced at the fifth grade level include changes in properties of matter, structures, functions and adaptations of organisms, and the structure of the earth's system. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade 5 Science		Nature of Science		
Standard 1		Students will

using safe investigative techniques.	experimental variables for investigations.	
Objectives	Students will	
SC.O.5.1.1	realize that scientists formulate and test their explanations of nature using observation and experiments.	
SC.O.5.1.2	recognize scientific knowledge is subject to modification as new scientific information challenges current explanations.	
SC.O.5.1.3	examine the careers and contributions of men and women of diverse cultures to the development of science.	
SC.O.5.1.4	compare and contrast the historical significance of scientific discoveries.	
SC.O.5.1.5	cooperate and collaborate to ask questions, design and conduct investigations to find answers and solve problems.	
SC.O.5.1.6	formulate conclusions through close observations, logical reasoning, objectivity, perseverance and integrity in data collection.	
SC.O.5.1.7	apply skepticism, careful methods, logical reasoning and creativity in investigating the observable universe.	
SC.O.5.1.8	use a variety of technologies and scientific instruments to conduct explorations, investigations and experiments of the natural world.	
SC.O.5.1.9	demonstrate safe techniques for handling, manipulating and caring for science materials, equipment, natural specimens and living organisms.	
SC.O.5.1.10	utilize experimentation to demonstrate scientific processes and thinking skills (e.g., formulating questions, predicting, forming hypotheses, quantifying, or identifying dependent and independent variables).	
SC.O.5.1.11	construct and use charts, graphs and tables to organize, display, interpret, analyze and explain data.	
SC.O.5.1.12	use inferential reasoning to make logical conclusions from collected data.	

Grade 5	Science			
Standard 2	Content of Science

<p>Objectives</p>	<p>Students will</p>			
SC.O.5.2.1	demonstrate an understanding of the interconnections of biological, earth and space, and physical science concepts.			
SC.O.5.2.2	identify and explain common energy conversions in cycles of matter including photosynthesis and the carbon dioxide cycle.			
SC.O.5.2.3	identify the structures of living organisms and explain their function.			
SC.O.5.2.4	observe and identify cells of organisms using a microscope.			
SC.O.5.2.5	compare variations of plant growth and reproduction.			
SC.O.5.2.6	contrast how the different characteristics of plants and animals help them to survive in different niches and environments including adaptations, natural selection, and extinction.			
SC.O.5.2.7	through the use of research and technology, explore the extinction of a species due to environmental conditions.			
SC.O.5.2.8	trace and describe the pathways of the sun's energy through producers, consumers and decomposers using food webs and pyramids.			
SC.O.5.2.9	explain that the mass of a material is conserved whether it is together, in parts, or in a different state.			
SC.O.5.2.10	recognize that elements are composed of only one type of matter.			
SC.O.5.2.11	using the periodic table, identify common elements according to their symbols.			

SC.O.5.2.12	through experimentation, identify substances by their relative densities (mass/volume=density).
SC.O.5.2.13	analyze diagrams of electrical circuits.
SC.O.5.2.14	measure electricity using voltage and wattage.
SC.O.5.2.15	investigate the properties of an electromagnet by selecting appropriate materials, designing and testing an electromagnet, and evaluating differences in design.
SC.O.5.2.16	describe how the variables of gravity and friction affect the motion of objects.
SC.O.5.2.17	compare and contrast the change in length, tension, or thickness of a vibrating object on the frequency of vibration.
SC.O.5.2.18	describe the layers of the earth and their various features.
SC.O.5.2.19	identify and describe natural landforms and explain how they change and impact weather and climate.
SC.O.5.2.20	use a variety of instruments and sources to collect and display weather data to describe weather patterns.
SC.O.5.2.21	compare and explain the different rates of weathering, erosion and deposition on various materials.
SC.O.5.2.22	analyze a topographical map to make inferences related to elevation and land features.
SC.O.5.2.23	identify resources as being renewable or non-renewable.
SC.O.5.2.24	explore and explain how fossils and geologic features can be used to determine the relative age of rocks and rock layers.
SC.O.5.2.25	recognize that the Earth is made of plates (plate tectonics).

Grade 5 Science				
Standard 3: Application of Science				
Students will				
SC.S.5.3	<ul style="list-style-type: none"> explore the relationship between the parts and the whole system; construct a variety of useful models; examine changes that occur in an object or system. demonstrate an understanding of the interdependence between science and technology. demonstrate the ability to utilize technology to gather data and communicate designs, results and conclusions. demonstrate the ability to evaluate the impact of different points of view on health, population, resource and environmental practices.

	particles are the same for the same type of matter.
SC.O.6.2.12	use indicators to classify substances as acidic, basic or neutral.
SC.O.6.2.13	using the periodic table, identify the symbols of elements as solids, liquids, and gases; metals or nonmetals.
SC.O.6.2.14	describe the composition and properties of matter (e.g., particles, malleability, melting point, density, inertia, or specific heat).
SC.O.6.2.15	investigate the properties of the electromagnetic spectrum (e.g., wavelengths, frequencies, visible light); relate wavelengths and/or frequencies to position on the electromagnetic spectrum (e.g., colors, x-ray).
SC.O.6.2.16	recognize that an object's color is based upon the absorption and reflection of light waves.
SC.O.6.2.17	describe light and sound in terms of longitudinal or transverse waves.
SC.O.6.2.18	describe the flow of heat between objects (e.g., hot air rises, or absorption and release of heat by metals).
SC.O.6.2.19	diagram simple parallel and series circuits (e.g., bulbs, battery, wires, or switch).
SC.O.6.2.20	correlate the relationship of mass to gravitational force (e.g., larger the mass the larger the gravitational force, or the closer the objects the stronger the force).
SC.O.6.2.21	examine simple machines and the forces involved.
SC.O.6.2.22	apply the effects of balanced and unbalanced forces on motion of objects.
SC.O.6.2.23	explain motion in terms of frames of reference and analyze graphs depicting motion and predicted future motion.
SC.O.6.2.24	monitor major atmospheric events using a variety of resources including technology.
SC.O.6.2.25	compare and contrast continental drift hypothesis to the plate tectonic theory.
SC.O.6.2.26	associate plant and animal life forms with specific geologic time periods.
SC.O.6.2.27	recognize the phases of the moon.
SC.O.6.2.28	investigate models of earth-moon-sun relationships (e.g., gravity, time, or tides).
SC.O.6.2.29	compare the earth's tilt and revolution to the seasonal changes.

Grade 5	Science

SC.O.6.3.1	explore the relationship between the parts of a system to the whole system.			
SC.O.6.3.2	construct a variety of useful models of an object, event, or process.			
SC.O.6.3.3	compare and contrast changes that occur in an object or a system to its original state.			
SC.O.6.3.4	compare and contrast the influence that a variation in scale will have on the way an object or system works. (e.g., cooling rates of different-sized containers of water, strength of different-sized constructions from the same material, or flight characteristics of different-sized model airplanes).			
SC.O.6.3.5	research everyday applications and interactions of science and technology.			
SC.O.6.3.6	evaluate and critically analyze mass media reports of scientific developments and events.			

Seventh Grade Science Content Standards and Objectives

The Seventh Grade Science objectives evaluate, interpret, and predict conditions and phenomena of the living and designed worlds. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy and use of 21st century skills in the fields of biology, chemistry, physics and earth/environmental science and astronomy. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research laboratory skills. Safety instruction is integrated into all activities. Seventh Grade Science reviews motions and forces, ecosystems, diversity of life, energy transformations, plate tectonics, earth's resources and weather. Major concepts expanded at the seventh grade level include elements, mixtures, and compounds, populations/ecosystems, conservation of matter and energy and earth's history. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade 7 Science		Nature of Science	
Standard 1	Students will		
SC.S.7.1	<ul style="list-style-type: none"> demonstrate an understanding of the history of science and the evolution of scientific knowledge. demonstrate an understanding of science as a human endeavor encompassing the contributions of diverse cultures and scientists. demonstrate an understanding of the characteristics of a scientist. demonstrate skills of scientific inquiry.

hypothesize, quantify independent and dependent variables, organize, interpret experimental data and state a conclusion demonstrating safe techniques.	hypothesize, identify independent and dependent variables, organize and interpret experimental data demonstrating safe techniques.	and interpret experimental data using safe techniques.	make predictions and organize data.
Objectives	Students will		
SC.O.7.1.1	realize that scientists formulate and test their explanations of nature using observation and experiments.		
SC.O.7.1.2	recognize scientific knowledge is subject to modification as new scientific information challenges current explanations.		
SC.O.7.1.3	examine the careers and contributions of men and women of diverse cultures to the development of science.		
SC.O.7.1.4	compare and contrast the historical significance of scientific discoveries.		
SC.O.7.1.5	cooperate and collaborate to ask questions, design and conduct investigations to find answers and solve problems.		
SC.O.7.1.6	formulate conclusions through close observations, logical reasoning, objectivity, perseverance and integrity in data collection.		
SC.O.7.1.7	apply skepticism, careful methods, logical reasoning and creativity in investigating the observable universe.		
SC.O.7.1.8	use a variety of technologies and scientific instruments to conduct explorations, investigations and experiments of the natural world.		
SC.O.7.1.9	demonstrate safe techniques for handling, manipulating and caring for science materials, equipment, natural specimens and living organisms.		
SC.O.7.1.10	utilize experimentation to demonstrate scientific processes and thinking skills (e.g., formulating questions, predicting, forming hypotheses, quantifying, or identifying dependent and independent variables).		
SC.O.7.1.11	construct and use charts, graphs and tables to organize, display, interpret, analyze and explain data.		
SC.O.7.1.12	use inferential reasoning to make logical conclusions from collected data.

<p>human systems, organs and cells; create dichotomous keys to group similar but distinct organisms based on traits; mathematically model the effects of changing cycles in ecosystems; compare and contrast life cycles of plants and their genetic adaptations; interpret a phase change diagram; classify substances as acids, bases, and salts to predict the products of neutralization reactions; predict the behavior of light waves through media change; compare alternating and direct current; evaluate the mechanical advantage of simple machines; propose changes in the force of gravity on other planets; predict weather and patterns of ocean circulation; relate rock classification and formation to topography; predict the life cycle of a star; predict climate based on latitude.</p>	<p>function of human systems, organs and cells; create dichotomous keys to group organisms; analyze the effects of changing cycles in ecosystems; compare life cycles of plants and their adaptations; draw a phase change diagram to show particle movement; classify substances as acids, bases, and salts to write neutralization word reactions; explain the behavior of light waves; explain lens technology; compare alternating and direct current; compare and contrast mechanical advantage of simple machines; research changes in the force of gravity on other planets; interpret weather and patterns of ocean circulation; relate rock formation to topography and classify rocks; investigate life cycles of a star; contrast climates at various latitudes.</p>	<p>systems, organs and cells; create simple keys to group organisms; analyze chemical and living cycles in ecosystems; illustrate life cycles of plants; describe particle movement and energy during phase changes; identify elements and compounds and place them in word equations; examine the behavior of light waves; interpret effect of medium on waves; characterize alternating and direct current; investigate energy transformation; explain mechanical advantage of simple machines; characterize gravity as a force; explain weather and patterns of ocean circulation; interpret and model topography; describe rock formation and classify rocks; explain life cycles of a star; relate latitude to climate.</p>	<p>diseases have on human systems, organs and cells; compare groups of organisms with a key; identify the role of cycles in ecosystems; illustrate life cycles of plants; illustrate phases of matter during phase changes; write word equations; examine the behavior of waves; recognize that waves are affected by a medium; define alternating and direct current; recognize that simple machines change force; identify gravity as a force; diagram weather and patterns of ocean circulation; group rocks with similar characteristics; model and identify topographic features; sketch the life cycle of a star; associate climates with latitudes.</p>	<p>compare groups of organisms; identify cycles in ecosystems; draw a plant life cycle; illustrate phases of matter; identify elements and compounds; recognize light and sound as waves; observe the interaction of waves and a medium; define current; list types of simple machines; define a force; observe weather and patterns of ocean circulation; describe types of rocks; model topography; recognize that stars have a life cycle; recognize latitude affects climate.</p>
---	---	--	--	---

Objectives	Students will
SC.O.7.2.1	demonstrate an understanding of the interrelationships among physics, chemistry, biology, earth/environmental science, and astronomy.
SC.O.7.2.2	identify and describe disease causing organisms (such as bacteria, viruses, protozoa, fungi) and the diseases they cause.
SC.O.7.2.3	explain how skeletal, muscular, and integumentary systems work together in the human body.

SC.O.7.2.4	compare the level of organization of cells, tissues and organs in living things.
SC.O.7.2.5	construct simple keys to differentiate among living things with similar characteristics.
SC.O.7.2.6	use pictures to show cyclical processes in nature (e.g., water cycle, nitrogen cycle, or carbon cycle).
SC.O.7.2.7	evaluate how the different adaptations and life cycles of plants and animals help them to survive in different niches and environments (e.g., inherited and acquired adaptations).
SC.O.7.2.8	analyze how changes in the environment have led to reproductive adaptations through natural selection.
SC.O.7.2.9	explain how an organism's behavior response is a combination of heredity and the environment.
SC.O.7.2.10	analyze the differences in the growth, development and reproduction in flowering and non-flowering plants.
SC.O.7.2.11	predict the trends of interdependent populations if one of the limiting factors is changed.
SC.O.7.2.12	evaluate the consequences of the introduction of chemicals into the ecosystem (e.g., environmental consequences, human health risks, or mutations).
SC.O.7.2.13	compare differences among elements, compounds, homogeneous and heterogeneous mixtures.
SC.O.7.2.14	examine the differences in types of solutions (e.g., solutes and solvents, relative concentrations, conductivity, pH).
SC.O.7.2.15	examine chemical reactions involving acids and bases by monitoring color changes of indicator(s) and identifying the salt formed in the neutralization reaction.
SC.O.7.2.16	write word equations to describe chemical reactions.
SC.O.7.2.17	describe the movement of individual particles and verify the conservation of matter during the phase changes (e.g., melting, boiling, or freezing).
SC.O.7.2.18	identify the characteristics of sound waves and describe how sound is perceived by the ear.
SC.O.7.2.19	define the absorption and reflection of light as translucent, opaque and transparent.
SC.O.7.2.20	interpret and illustrate changes in waves as they encounter various mediums (e.g., mirrors, or lenses).
SC.O.7.2.21	Investigate absorption and reflection of light by an object.
SC.O.7.2.22	characterize AC and DC circuits.
SC.O.7.2.23	explain conservation of matter and energy and investigate the different forms of energy (e.g., mechanical, potential, kinetic, or gravitational).
SC.O.7.2.24	perform experiments with simple machines to demonstrate the relationship between forces and distance; use vectors to represent motion.
SC.O.7.2.25	explain the effect of gravity on falling objects (e.g., $g=9.8\text{m/s}^2$, object dropped on earth and on moon).
SC.O.7.2.26	describe and compare the causes of tides, surfs and currents.
SC.O.7.2.27	examine the effects of the sun's energy on oceans and weather (e.g., air masses, or convection currents).
SC.O.7.2.28	interpret GIS maps and create and interpret topographical maps.
SC.O.7.2.29	describe rock formations (e.g., rock cycle).
SC.O.7.2.30	classify rocks (e.g., crystal/particle size, or mineral composition and uses).
SC.O.7.2.31	determine the relevant age of rock layers using index fossils and the law of superposition.
SC.O.7.2.32	explain how changing latitude affects climate.
SC.O.7.2.33	trace the life cycle of a star.

Grade 7 Science	
Standard 3 Application of Science	
SC.S.7.3	<p>Students will</p> <ul style="list-style-type: none"> explore the relationship between the parts and the whole system; construct a variety of useful models; examine changes that occur in an object or system. demonstrate an understanding of the interdependence between science and technology. demonstrate the ability to utilize technology to gather data and communicate designs, results and conclusions. demonstrate the ability to evaluate the impact of different points of view on health, population, resource and environmental practices.
Performance Descriptors SC.PD.7.3	
Distinguished	<p>Above Mastery</p> <p>Seventh grade students at the above mastery level evaluate the role of parts that contribute to the functioning of the system; analyze changes in systems and models; identify innovations with the science that makes them possible; select and use the appropriate technology to collect scientific data; use multiple media sources to evaluate different points of view regarding health, population, resources and environmental practices.</p>
Seventh grade students at the distinguished level predict the change in a system and/or model as a result of changing a part; identify an innovation and the science that makes it possible; evaluate the appropriateness of selected technology to collect scientific data; evaluate the persuasiveness of points of view regarding health, population, resources and environmental practices presented by various media sources.	<p>Mastery</p> <p>Seventh grade students at the mastery level analyze the functioning of the system; analyze changes in systems and models; match an innovation with the science that makes it possible; identify and use the appropriate technology to collect scientific data; use multiple media sources to evaluate different points of view regarding health, population, resources and environmental practices.</p>
	<p>Partial Mastery</p> <p>Seventh grade students at the partial mastery level compare the functioning of parts to the functioning of the system; match an innovation with the science that makes it possible; use the appropriate technology to collect scientific data; use media sources to evaluate different points of view regarding health, population, resources or environmental practices.</p>
	<p>Novice</p> <p>Seventh grade students at novice level identify parts of a system; identify a scientific/ technological innovation; use technology to collect scientific data; use media sources to identify a point of view regarding health, population, resources or environmental practices.</p>
Objectives	Students will
SC.O.7.3.1	explore the relationship between the parts of a system to the whole system.
SC.O.7.3.2	construct a variety of useful models of an object, event, or process.
SC.O.7.3.3	compare and contrast changes that occur in an object or a system to its original state.
SC.O.7.3.4	compare and contrast the influence that a variation in scale will have on the way an object or system works. (e.g., cooling rates of different-sized containers of water, strength of different-sized constructions from the same material, or flight characteristics of different-sized model airplanes).

SC.O.7.3.5	research everyday applications and interactions of science and technology.
SC.O.7.3.6	evaluate and critically analyze mass media reports of scientific developments and events.
SC.O.7.3.7	explore the connections between science, technology, society and career opportunities.

Eighth Grade Science Content Standards and Objectives

The Eighth Grade Science objectives analyze, quantify, and explain conditions and phenomena of the living and designed worlds. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy and use of 21st century skills in the fields of biology, chemistry, physics and earth/environmental science and astronomy. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. Eighth Grade Science reviews elements, mixtures, and compounds, populations/ecosystems, conservation of matter and energy and earth's history. Major concepts introduced at the eighth grade level include reproduction, genetics, behavior, chemical reactions and environmental concerns. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

results; draw conclusions from data sources and models.	results; draw conclusions from data sources and models.	from a data source or model.	experimental data.
Objectives	Students will:		
SC.O.8.1.1	formulate scientific explanations based on historical observations and experimental evidence, accounting for variability in experimental results.		
SC.O.8.1.2	demonstrate how a testable methodology is employed to seek solutions for personal and societal issues. (e.g., "scientific method").		
SC.O.8.1.3	relate societal, cultural and economic issues to key scientific innovations.		
SC.O.8.1.4	conduct and/or design investigations that incorporate the skills and attitudes and/or values of scientific inquiry (e.g., established research protocol, accurate record keeping, replication of results and peer review, objectivity, openness, skepticism, fairness, or creativity and logic).		
SC.O.8.1.5	implement safe procedures and practices when manipulating equipment, materials, organisms, and models.		
SC.O.8.1.6	use appropriate technology solutions within a problem solving setting to measure and collect data; interpret data; analyze and/or report data; interact with simulations; conduct research; and present and communicate conclusions.		
SC.O.8.1.7	design, conduct, evaluate and revise experiments (e.g., compose a question to be investigated, design a controlled investigation that produces numeric data, evaluate the data in the context of scientific laws and principles, construct a conclusion based on findings, propose revisions to investigations based on manipulation of variables and/or analysis of error, or communicate and defend the results and conclusions).		
SC.O.8.1.8	draw conclusions from a variety of data sources to analyze and interpret systems and models (e.g., use graphs and equations to measure and apply variables such as rate and scale, evaluate changes in trends and cycles, predict the influence of external variances such as potential sources of error, or interpret maps).

--	--	--	---	---

Objectives	Students will
SC.O.8.2.1	demonstrate an understanding of the interrelationships among physics, chemistry, biology, earth/environmental science, and astronomy.
SC.O.8.2.2	examine and describe the structures and functions of cell organelles.
SC.O.8.2.3	explain how the circulatory, respiratory and reproductive systems work together in the human body.
SC.O.8.2.4	compare the variations in cells, tissues and organs of the circulatory, respiratory and reproductive systems of different organisms.
SC.O.8.2.5	discuss how living cells obtain the essentials of life through chemical reactions of transpiration, respiration and photosynthesis.
SC.O.8.2.6	analyze how behaviors of organisms lead to species continuity (e.g., reproductive/mating behaviors, or seed dispersal).
SC.O.8.2.7	demonstrate the basic principles of genetics; introduce Mendel's law, monohybrid crosses, production of body and sex cells (mitosis/meiosis), genes, chromosomes, and inherited traits.
SC.O.8.2.8	compare patterns of human development to other vertebrates.
SC.O.8.2.9	organize groups of unknown organisms based on observable characteristics (e.g., create dichotomous keys).
SC.O.8.2.10	trace matter and energy flow in a food web as it flows from sunlight to producers and consumers, design an environment in which the chemical and energy needs for the growth, reproduction and development of plants are met (e.g., food pyramids, decomposition).
SC.O.8.2.11	use the periodic table to locate and classify elements as metallic, non-metallic or metalloids.
SC.O.8.2.12	reconstruct development models of the atom (e.g., Crookes, Thompson, Becquerel, Rutherford, or Bohr).
SC.O.8.2.13	calculate the number of protons, neutrons, and electrons and use the information to construct a Bohr model of the atom.
SC.O.8.2.14	classify elements into their families based upon their valence electrons.
SC.O.8.2.15	evaluate the variations in diffusion rates and examine the effect of changing temperatures.
SC.O.8.2.16	conduct and classify chemical reactions by reaction type (e.g., synthesis, decomposition, single replacement or double replacement); energy type (e.g., endothermic and exothermic); and write word equations for the chemical reactions.
SC.O.8.2.17	identify and describe factors that affect chemical reaction rates, including catalysts, temperature changes, light energies and particle size.
SC.O.8.2.18	examine the various sources of energy (e.g., fossil fuels, wind, solar, geothermal, nuclear, biomass).
SC.O.8.2.19	explain the Doppler effect (e.g., sound).
SC.O.8.2.20	quantitatively represent wavelength, frequency and velocity (e.g., $v = \lambda f$).
SC.O.8.2.21	relate the conservation of energy theory to energy transformations (e.g., electrical/heat, or mechanical/heat).
SC.O.8.2.22	quantitatively represent work, power, pressure (e.g., $\text{Work} = \text{Force} \times \text{distance}$, $\text{Power} = \text{Work}/\text{time}$, or $\text{pressure} = \text{force}/\text{area}$) from collected data.
SC.O.8.2.23	graph and interpret the relationships of distance versus time, speed versus time, and acceleration versus time.
SC.O.8.2.24	describe Newton's Laws of Motion; identify examples, illustrate qualitatively and quantitatively drawing vector examples.
SC.O.8.2.25	illustrate and calculate the mechanical advantage of simple machines.
SC.O.8.2.26	research and draw conclusions related to the quality and quantity of surface and ground water.
SC.O.8.2.27	identify and explain the principle forces of plate tectonics and related geological events (e.g., earthquakes, volcanoes, or landforms).
SC.O.8.2.28	determine the impact of oceans on weather and climate; relate global patterns of atmospheric movement on local weather.
SC.O.8.2.29	analyze the forces of tectonics, weathering and erosion that have shaped the earth's surface.

SC.O.8.2.30	model processes of soil formation and suggest methods of soil preservation and conservation.
SC.O.8.2.31	research and recognize the societal concerns of exploration and colonization of space.
SC.O.8.2.32	explain phenomena associated with motions in sun-earth-moon system (e.g., eclipses, tides, or seasons).
SC.O.8.2.33	describe the origin and orbits of comets, asteroids, and meteoroids.

Grade 8 Science	
Standard 3: Application of Science	
SC.S.8.3	Students will <ul style="list-style-type: none"> • demonstrate the ability to use inquiry process to explore systems, models, and changes. • demonstrate an understanding of the interdependence between science and technology. • demonstrate an understanding of the utilization of technology to gather data and communicate designs, results and conclusions. • demonstrate an understanding of personal and societal benefits of science, and an understanding of public policy decisions as related to health, population, resource and environmental issues.

Performance Descriptors SC.PD.8.3				
Distinguished				
Eighth grade students at the distinguished level construct, test and analyze data to explore systems, models, and changes across science disciplines; analyze technological innovations and the science that makes them possible; evaluate the personal and societal benefits of a scientific discovery; assess the impacts of a public policy decision regarding health, population resources or environmental issues.	Above Mastery Eighth grade students at the above mastery level test, record and analyze data to explore systems, models, and changes; identify technological innovations and the science that makes them possible; explain positive outcomes and unintended consequences of a scientific discovery; explain the impact of a public policy decision regarding health, population resources or environmental issues.	Mastery Eighth grade students at the mastery level test and record data to explore systems, models, and changes; identify a technological innovation and the science that makes it possible; identify positive outcomes and unintended consequences of a scientific discovery; identify the impact of a public policy decision regarding health, population resources or environmental issues.	Partial Mastery Eighth grade students at the partial mastery level observe and record data to explore systems, models, or changes; match a technological innovation with the science that makes it possible; identify a positive outcome and an unintended consequence of a scientific discovery; read and restate a public policy decision impacting health, population resources or environmental issues.	Novice Eighth grade students at the novice level observe and record data that relates to systems, models, or changes; identify a technological innovation; identify a positive outcome and an unintended consequence of a scientific discovery; read and restate a public policy decision impacting health, population resources or environmental issues.
Objectives	Students will			
SC.O.8.3.1	synthesize concepts across various science disciplines to better understand the natural world (e.g., form and function, systems, or change over time).			
SC.O.8.3.2	investigate, compare and design scientific and technological solutions to personal and societal problems.			

SC.O.8.3.3	communicate experimental designs, results and conclusions using advanced technology tools.
SC.O.8.3.4	collaborate to present research on current environmental and technological issues to predict possible solutions.
SC.O.8.3.5	explore occupational opportunities in science, engineering and technology and evaluate the required academic preparation.
SC.O.8.3.6	given a current science-technology-societal issue, construct and defend potential solutions.
