**NOTICE OF AGENCY ADOPTION OF A PROCEDURAL OR INTERPRETIVE RULE
OR A LEGISLATIVE RULE EXEMPT FROM LEGISLATIVE REVIEW**

AGENCY: West Virginia Board of Education TITLE NUMBER: 126

CITE AUTHORITY: W. Va. Constitution, Article XII, §2, W. Va. Code §18-2-5 and §18-9A-22

RULE TYPE: PROCEDURAL _____ INTERPRETIVE _____

EXEMPT LEGISLATIVE RULE X

CITE STATUTE(S) GRANTING EXEMPTION FROM LEGISLATIVE REVIEW

W. Va. Code §§29A-3B-1, et seq.; W. Va. Board of Education
v. Hechler, 180 W.Va. 451; 376 S.E.2d 839 (1988).

AMENDMENT TO AN EXISTING RULE: YES X NO _____

IF YES, SERIES NUMBER OF RULE BEING AMENDED: 44R

TITLE OF RULE BEING AMENDED: 21st Century Science 9-12 Content Standards and
Objectives for West Virginia Schools (2520.35)

IF NO, SERIES NUMBER OF NEW RULE BEING PROPOSED: _____

TITLE OF RULE BEING PROPOSED: _____

THE ABOVE RULE IS HEREBY ADOPTED AND FILED WITH THE SECRETARY OF STATE. THE
EFFECTIVE DATE OF THIS RULE IS July 1, 2009.

Jack McClanahan
Deputy State Superintendent of Schools

EXECUTIVE SUMMARY

WEST VIRGINIA DEPARTMENT OF EDUCATION

Policy Number and Title: Policy 2520.35 - 21st Century Science 9-12 Content Standards and Objectives for West Virginia

Background: West Virginia Content Standards and Objectives were formally reviewed by Dr. William Schmitt from the University of Michigan, who compared these standards to the TIMMS countries. Dr. Schmitt specifically cited the West Virginia CSOs excessive number of objectives and the lack of advanced level cognitive demand skills of Standard Two. The individuals who were involved with the changes of this policy are Carla Williamson, Executive Director of the Office of Instruction; Marty Burke, Assistant Director of the Office of Instruction; Robin Anglin, Science Coordinator in the Office of Instruction; Tim Butcher, Coordinator in the Office of Assessment/Accountability; Steve Beckelhimer, Coordinator in the Office of Instruction; and Rosalie Rhodes, Science Coordinator for Kanawha County Schools.

Proposals: Revisions to Policy 2520.35 are being recommended for:

- Ninth Grade Physical Science Content Standard and Objectives to reduce the number of Standards from three to two by collapsing SC.S.PS.1 Standard 1 Nature of Science and SC.S.PS.3 Standard 3, Application of Science, into a new SC.S.PS.1 Standard One, Nature and Application of Science. The objectives were organized and written succinctly in the Performance Descriptors SC.S.PS.1 and SC.S.PS.2 to indicate the level of achievement.
- Biology Content Standard and Objectives Content Standard and Objectives to reduce the number of Standards from three to two by collapsing SC.S.B.1 Standard 1 Nature of Science and SC.S.B.3 Standard 3, Application of Science, into a new SC.S.B.1, Standard One, Nature and Application of Science.
- Revision of SC.S.B.2 Content of Science occurred in the rewriting of these objectives with higher cogitative demand. The objectives were organized thematically and written succinctly in the Performance Descriptors of SC.S.B.1 and SC.S.B.2 to indicate the level of achievement.
- Conceptual Biology Content Standard and Objectives to reduce the number of Standards from three to two by collapsing SC.S.CB.1 Standard 1 Nature of Science and SC.S.CB.3 Standard 3, Application of Science, into a new SC.S.CB.1 Standard One, Nature and Application of Science.
- Revision of SC.S.CB.2, Content of Science, occurred in the rewriting of these objectives with higher cogitative demand. The objectives were organized thematically and written succinctly in the Performance Descriptors SC.S.CB.1 and SC.S.CB.2 to indicate the level of achievement.

Impact: The proposed revision of the Content Standards and Objectives of Ninth Grade Physical Science, Biology and Conceptual Biology will provide the desired direction for students and teachers to focus on specific concepts that are necessary to achieve the desired 21st century science skills.

Response to Comments: Twelve comments were received regarding content, format, and general information. Revisions were made based on the comments; formatting, spelling, performance descriptors and term explanation. The complete log is attached.

FILED

TITLE 126
LEGISLATIVE RULE
BOARD OF EDUCATION

2009 MAY 18 PM 1:59

SERIES 44R
21st CENTURY SCIENCE 9-12 CONTENT STANDARDS AND OBJECTIVES FOR
WEST VIRGINIA SCHOOLS (2520.35)

OFFICE WEST VIRGINIA
SECRETARY OF STATE

§126-44R-1. General.

1.1. Scope. – West Virginia Board of Education Policy 2510 provides a definition of a delivery system for, and an assessment and accountability system for, a thorough and efficient education for West Virginia public school students. Policy 2520.35 defines the content standards (or instructional goals) and objectives for science 9-12 as required by W. Va. 126CSR42 (Policy 2510).

1.2. Authority. – W. Va. Constitution, Article XII, §2, W. Va. Code §18-2-5 and §18-9A-22.

1.3. Filing Date. -- May 18, 2009.

1.4. Effective Date. -- July 1, 2009.

1.5. Repeal of former rule. – This legislative rule amends W. Va. 126CSR44R West Virginia Board of Education Policy 2520.35 "21st Century Science 9-12 Mathematics Content Standards and Objectives for West Virginia Schools (2520.35)" filed December 15, 2006 and effective July 1, 2008.

§126-44R-2. Purpose.

2.1. This policy defines the content standards (or instructional goals) and objectives for the program of study required by Policy 2510 in science 9-12.

§126-44R-3. Incorporation by Reference.

3.1. A copy of 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools is attached and incorporated by reference into this policy. Copies may be obtained in the Office of the Secretary of State and in the West Virginia Department of Education, Office of Instruction.

§126-44R-4. Summary of the Content Standards and Objectives.

4.1. The West Virginia Board of Education has the responsibility for establishing high quality standards pertaining to all educational standards (W. Va. Code §18-9A-22). The content standards and objectives provide a focus for teachers to teach and students to learn those skills and competencies essential for future success in the workplace and further education. The document includes content standards for science, an explanation of terms, objectives that reflect a rigorous and challenging curriculum, and performance descriptors.

West Virginia Department of Education

**West Virginia Board of Education Policy
2520.35
21st Century Science 9-12 Content
Standards and Objectives for West
Virginia Schools**

**Steven L. Paine
State Superintendent**

Foreword

A 21st century science curriculum is an increasingly important component in the development learners prepared for success in the 21st century. Thus, the West Virginia Board of Education and the West Virginia Department of Education are pleased to present Policy 2520.35, 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools. The West Virginia Science Standards for 21st Century Learning includes 21st century content standards and objectives as well as 21st century standards and objectives for *learning skills* and *technology tools*. This broadened scope of science curriculum is built on the firm belief that quality engaging instruction must be built on a curriculum that triangulates rigorous 21st century content, 21st century learning skills and the use of 21st century technology tools.

Committees of educators from across the state convened to revise the content standards and objectives. The overarching goal was to build a rigorous, relevant and challenging science curriculum that would prepare students for the 21st century. West Virginia educators, including regular classroom teachers, special education teachers, and teachers representing higher education institutions played a key role in shaping the content standards to align with national standards, rigorous national assessments, and research and best practice in the field of science education. The contribution of these professionals was critical in creating a policy that is meaningful to classroom teachers and appears in a format that can easily be used and understood.

Policy 2520.35 is organized around the three major components of a standards-based curriculum: learning standards, instructional objectives and performance descriptors. The learning standards are the *broad descriptions* of what *all* students must know and be able to do at the conclusion of the instructional sequence. The accompanying grade-level objectives are specific descriptors of knowledge, skills and attitudes that when mastered will enable the student to attain the standard. The instructional objectives guide instructional *planning* and provide a basis for determining appropriate *assessments, instructional strategies and resources*. The performance descriptors provide the basis for *assessing* overall student competence of grade level standards. The performance descriptors define the five student performance levels ranging from novice to distinguished. With the ultimate goal of “learning for all,” these descriptors allow the teacher, students and parents to judge the *level* of student proficiency in each 21st century learning standard.

In combination, the use of learning standards, instructional objectives and performance descriptors become a comprehensive guide for delivering a rigorous and relevant science curriculum to all West Virginia students. These elements, when used to guide the instructional process and when delivered with the creativity and instructional expertise of West Virginia teachers, will become a powerful resource for preparing students to meet the challenges of the 21st century.

Steven L. Paine
State Superintendent of Schools

Explanation of Terms

Content Standards are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by course title and are organized around the content standards.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Line breaks within the narrative format indicate clusters of concepts and skills. West Virginia has designed five performance levels: distinguished, above mastery, mastery, partial mastery and novice. Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills students need to acquire. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Distinguished: A student at this level has demonstrated exemplary performance. The work shows a distinctive and sophisticated application of knowledge and skills in real world situations that go beyond course or grade level applications.

Above Mastery: A student at this level has demonstrated effective performance and exceeds the standard. The work shows a thorough and effective application of knowledge and skills in real world situations within the subject matter and grade level.

Mastery: A student at this level has demonstrated competency over challenging subject matter, including knowledge and skills that are appropriate to the subject matter and grade level. The work is accurate, complete and addresses real world applications. The work shows solid academic performance at the course or grade level.

Partial Mastery: A student at this level has demonstrated limited knowledge and skills toward meeting the standard. The work shows basic but inconsistent application of knowledge and skills characterized by errors and/or omissions. Performance needs further development.

Novice: A student at this level has demonstrated minimal fundamental knowledge and skills needed to meet the standard. Performance at this level is fragmented and/or incomplete and needs considerable development.

Numbering of Standards

The number for each content standard is composed of four parts, each part separated by a period:

- the content area code is SC for Science,
- the letter S, for Standard,
- the grade level and
- the standard number.

Illustration: SC.S.C.1 refers to Chemistry science content standard #1.

Numbering of Objectives

The number of each objective is composed of five parts, each part separated by a period:

- the content area code (SC for Science),
- the letter O is for Objective,
- the course title,
- the number of the content standard addressed, and
- the objective number.

Illustration: SC.O.C.2.3 refers to a Chemistry objective that addresses standard #2 in science, and that is the third objective listed under that standard.

Numbering of Performance Descriptors

The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- the content area (SC for Science),
- the letters PD are for Performance Descriptors,
- the course title, and
- the standard number.

Illustration: SC.PD.C.2 refers to science performance descriptors for Chemistry, content standard 2.

Unique Electronic Numbers (UENs)

Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520.35 is available on the Web, each standard, each objective, and each group of five performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520.35 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520.35 is approved by the State Board of Education.

The prefix for the UENs for each content area in Policy 2520.35 is noted at the top of each page containing standards, objectives and performance descriptors. As sections of 2520.35 are revised, UENs will be changed to reflect the new approval date.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for fifth grade science standard #2 will be "200602.SC.S.5.2".

SCIENCE – POLICY 2520.35

The high school science content standards identify what students should know, understand and be able to do in the natural sciences through the twelfth grade. Because each content standard utilizes the knowledge and skills of other standards, they are designed to be used as an integrated whole. Although material can be added to the content standards, using only a subset of the standards will leave gaps in the students' scientific literacy.

A three-dimensional instructional strategy model must be utilized to address the science curriculum and assure students' depth of understanding and breadth of knowledge in Ninth Grade Science, Tenth Grade Science, Biology II, Chemistry, Conceptual Chemistry, Chemistry II, Physics, Conceptual Physics, Physics II, Earth Science, and Human Anatomy and Physiology. That model uses the nature, content and application of science concepts to develop scientific inquiry and reasoning skills in students.

Standard 1: Nature of Science

The study of science as a human endeavor provides for the acquisition of ideas leading toward the current knowledge base that represents science content. The nature of science encompasses the basic values and beliefs that make up the scientific world view, how scientists go about their work and the general culture of scientific enterprise. Studying historical and current discoveries of scientists and scientific milestones provides students with information about how discoveries have influenced current scientific thought and advancements. Students should understand that the continuous development of scientific knowledge shapes history. The study of the history and nature of science clarifies scientific inquiry and the role of science in the development of world cultures. Students will engage in active inquiry through investigations and hands-on activities a minimum of 50% of the instructional time. Developing scientific literacy requires a learning environment in which students actively participate in meaningful hands-on activities while developing current technology skills. These investigations explore the natural world, require critical thinking and develop process skills. Learning activities are sequenced to shape, modify and develop students' knowledge in order for them to become independent inquirers.

Standard 2: Content of Science

Science subject matter focuses on the scientific facts, concepts, principles, theories and models that are important for all students to know, understand and apply. Through the integration of the fields of science and the development of unifying themes, students will understand the interrelationships among biology, chemistry, physics and the earth sciences. Scientifically literate students will make connections in the formal education setting and will apply their knowledge and skills to daily life experiences. The objectives describe the specific subject matter/concepts that students are to master at each grade level.

Standard 3: Application of Science

Broad unifying themes complement the perspectives presented in the other content standards. These themes are fundamental to understanding and unifying the various science disciplines. Major unifying themes are systems, models and changes. Scientific design and application permits the extension of senses, the enhancement of the knowledge base, transportation of materials and information, synthesizing of new products and the modification of the world. Students must learn to use technology to analyze situations, gather relevant information, generate and evaluate creative ideas, pose tangible solutions and communicate their analyses, results and suggestions concisely. The need to adapt to the rapid changes that are likely to occur in the future makes it imperative that students develop a broad spectrum of technology-related skills and an openness to change. Applying science and technological innovations to personal and social issues such as health, populations, resources and environment helps students to develop decision-making skills. As students expand their conceptual horizons, they should recognize that collective individual actions manifest as societal issues. Students must recognize that society cannot afford to deal only with symptoms; personal and

societal actions must be focused on elimination of the causes of problems. Students should recognize that unless imposed by legislation social change involves negotiation among different interest groups. Students must be allowed to encounter and examine social change in a variety of current and historical contexts.

A two-dimensional instructional strategy model must be utilized to address the science curriculum and assure students' depth of understanding and breadth of knowledge in Ninth Grade Physical Science, Biology, and Conceptual Biology. This model uses the content of science with the nature and application of science to develop scientific inquiry and reasoning skills in students.

Standard 1: Nature and Application of Science

The study of science as a human endeavor provides for the acquisition of ideas leading toward the current knowledge base that represents science content. The nature and application of science encompasses the basic values and beliefs that make up the scientific world view, how scientists go about their work and the general culture of scientific enterprise. Students should understand that the continuous development of scientific knowledge shapes history. Students will engage in active inquiry through investigations and hands-on activities a minimum of 50% of the instructional time using safe procedures and practices. Developing scientific literacy requires a learning environment in which students actively participate in meaningful hands-on activities while developing current technology skills. Scientific design and application permits the extension of senses, the enhancement of the knowledge base, transportation of materials and information, synthesizing of new products and the modification of the world. These investigations explore the natural world, require critical thinking and develop process skills. Learning activities are sequenced to shape, modify and develop students' knowledge in order for them to become independent inquirers. Students must learn to analyze situations, gather relevant information, generate and evaluate creative ideas, pose tangible solutions and communicate their analyses, results and suggestions concisely.

Standard 2: Content of Science

Science subject matter focuses on the scientific facts, concepts, principles, theories and models that are important for all students to know, understand and apply. Through the integration of the fields of science and the development of unifying themes, students will understand the interrelationships among biology, chemistry, physics and the earth sciences. Scientifically literate students will make connections in the formal education setting and will apply their knowledge and skills to daily life experiences. The objectives describe the specific subject matter/concepts that students are to master at each grade level.

The Role of Technology

West Virginia's vision for education includes the integration of technology throughout the curriculum so that all West Virginia students have the opportunity to develop technology skills that support learning and provide the ability to adapt to change. Successful learning environments provide opportunities for students to use education technology interwoven with relevant curricular content. West Virginia teachers are responsible for integrating technology appropriately in the students' learning environment.

Organization of the Science Program of Study

The West Virginia Science Program of Study is drawn from the National Science Education Standards and the Project 2061 Benchmarks to promote a rigorous and challenging science curriculum. Through experiencing a spiraling, inquiry-based program of study, students in grades K-8 will develop foundational knowledge and skills in the physical sciences, the life sciences, and the earth and space sciences. To assure scientific literacy for all students, a coordinated, integrated approach is utilized in grades K-8. Students in the 9th, 10th, 11th and 12th grades participate in advanced in-depth laboratory-based elective courses designed to expand their conceptual understanding and enhance their research and laboratory skills.

Ninth Grade Science Content Standards and Objectives

The Ninth Grade Science objectives continue the development of foundational knowledge in biology, chemistry, physics, earth/environmental science and astronomy. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy and the use of 21st Century Skills across these major fields of science. Subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes, and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50 percent of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated in all activities. Building on the knowledge and skills acquired in Eighth Grade Science, students in Ninth Grade Science will expand and deepen their understanding of major concepts such as energy interactions, genetic probabilities, chemical changes and mineral composition of local rock layers. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade 9 Science		Nature of Science			
Standard	Students will	Above Mastery	Mastery	Partial Mastery	Novice
SC.S.9.1	<p>Students will</p> <ul style="list-style-type: none"> demonstrate an understanding of history and nature of science as a human endeavor encompassing the contributions of diverse cultures and scientists. demonstrate the ability to use the inquiry process to solve problems. 	<p>Students at the above mastery level will analyze the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural and economic issues; use scientific methodology to design, conduct, communicate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from multiple data sources and models.</p>	<p>Students at the mastery level will examine the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural and economic issues; use scientific methodology to conduct, communicate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from data sources and models.</p>	<p>Students at the partial mastery level will describe the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural or economic issues; use scientific methodology to conduct and communicate experiments utilizing safe procedures and appropriate technology; select an appropriate conclusion from a list of possible conclusions drawn from experimental data.</p>	<p>Students at the novice level will identify the importance of scientific innovation and associate these innovations with advances in societal, cultural or economic issues; conduct experiments utilizing safe procedures and appropriate technology; differentiate between observations and conclusions.</p>
Performance Descriptors SC.PD.9.1					
Distinguished	Students at the distinguished level will analyze the importance of scientific innovation and relate these innovations to the utilization of scientific methodology, variability in experimental results to advances in societal, cultural and economic issues; design, conduct, communicate, evaluate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from multiple data sources and				

interpretation of models.		
Objectives	Students will	
SC.O.9.1.1	formulate scientific explanations based on historical observations and experimental evidence, accounting for variability in experimental results.	
SC.O.9.1.2	demonstrate how a testable methodology is employed to seek solutions for personal and societal issues (e.g., "scientific method").	
SC.O.9.1.3	relate societal, cultural and economic issues to key scientific innovations.	
SC.O.9.1.4	conduct and/or design investigations that incorporate the skills and attitudes and/or values of scientific inquiry (e.g., established research protocol, accurate record keeping, replication of results and peer review, objectivity, openness, skepticism, fairness, or creativity and logic).	
SC.O.9.1.5	implement safe procedures and practices when manipulating equipment, materials, organisms, and models.	
SC.O.9.1.6	use appropriate technology solutions within a problem solving setting to measure and collect data, interpret data, analyze and/or report data, interact with simulations, conduct research, and present and communicate conclusions.	
SC.O.9.1.7	design, conduct, evaluate and revise experiments (e.g., compose a question to be investigated, design a controlled investigation that produces numeric data, evaluate the data in the context of scientific laws and principles, construct a conclusion based on findings, propose revisions to investigations based on manipulation of variables and/or analysis of error, or communicate and defend the results and conclusions).	
SC.O.9.1.8	draw conclusions from a variety of data sources to analyze and interpret systems and models (e.g., use graphs and equations to measure and apply variables such as rate and scale, evaluate changes in trends and cycles; predict the influence of external variances such as potential sources of error, or interpret maps).	

Grade 9	Science

--	--	--	---	--

relative dating techniques.	Students will
SC.O.9.2.1	apply principles of Mendelian genetics to solve heredity problems.
SC.O.9.2.2	illustrate meiosis and mitosis and relate to chromosome number and production of sperm, egg and body cells.
SC.O.9.2.3	analyze cyclic changes in populations of organisms.
SC.O.9.2.4	design an environment that demonstrates the interdependence of plants and animals (e.g., energy and chemical cycles, adaptations of structures and behaviors).
SC.O.9.2.5	compare and contrast the structure and function of cells, tissues and systems of different organisms.
SC.O.9.2.6	diagram the transfer of matter and energy in the chemical/molecular processes of photosynthesis, respiration and fermentation.
SC.O.9.2.7	predict chemical and physical properties of an element using its position in the periodic table.
SC.O.9.2.8	compare the types of radioactive decay in terms of particles and energy generated.
SC.O.9.2.9	predict the changes in density as mass and volume change.
SC.O.9.2.10	relate molecular motion, kinetic energy and states of matter.
SC.O.9.2.11	write formulas and name compounds given oxidation numbers of monatomic and polyatomic ions.
SC.O.9.2.12	propose the results of changing the number of protons, neutrons or electrons on the properties of an atom.
SC.O.9.2.13	determine formulas and names for binary compounds.
SC.O.9.2.14	classify a binary chemical bond as ionic, nonpolar covalent or polar covalent.
SC.O.9.2.15	given a chemical equation deduce the coefficients and classify the reaction type (e.g., synthesis or combination, decomposition, single replacement, or double replacement and combustion).
SC.O.9.2.16	assess and provide evidence to justify the occurrence of a chemical reaction (e.g., production of color, light, heat, sound, smell, gas, or precipitate).
SC.O.9.2.17	differentiate various forms of energy and energy transformations including fission and fusion.
SC.O.9.2.18	assess absorption and dissipation of heat by various materials.
SC.O.9.2.19	experimentally deduce and diagram the magnetic field of a bar magnet.
SC.O.9.2.20	construct electric circuits and mathematically model electric circuits using Ohm's Law and power equations.
SC.O.9.2.21	establish the relationship between distance and the intensity of light, charge and gravitational attraction (e.g., inverse square law).
SC.O.9.2.22	interpret and draw conclusions from speed-distance-time data and graphs.
SC.O.9.2.23	analyze experiments to determine which variables affect the motion of pendulums.
SC.O.9.2.24	differentiate between transverse and longitudinal waves and model examples of each type (e.g., light, sound, or seismic).
SC.O.9.2.25	predict weather based on the relationships of temperature, air pressure, wind speed, wind direction and humidity as depicted on a weather map and meteorological data.
SC.O.9.2.26	analyze the relationships among latitude, altitude and climate.
SC.O.9.2.27	classify common rock forming minerals by examining their physical and chemical properties.
SC.O.9.2.28	analyze the processes of the rock cycle to predict the paleo-environment in which a rock sample is formed.
SC.O.9.2.29	examine seismographic and geologic evidence to determine the structure and composition of the Earth's interior.
SC.O.9.2.30	use relative dating techniques to determine the ages of stratigraphic layers.
SC.O.9.2.31	interpret a half-life graph to determine the absolute age of a given sample.
SC.O.9.2.32	compare and contrast theoretical models explaining forces driving lithospheric plate motion (e.g., slab pull, plate push, or convection).
SC.O.9.2.33	research and organize evidence to support the theory of plate tectonics.

SC.O.9.2.34 apply fusion, heat transfer, gravity, and electromagnetism to the sun, its evolution and its impact on earth.

Grade 9 Science	
Standard 3 Application of Science	
SC.S.9.3	<p>Students will</p> <ul style="list-style-type: none"> • demonstrate the ability to use inquiry process to explore systems, models, and changes. • demonstrate an understanding of the interdependence between science and technology. • demonstrate an understanding of the utilization of technology to gather data and communicate designs, results and conclusions. • demonstrate an understanding of personal and societal benefits of science, and an understanding of public policy decisions as related to health, population, resource and environmental issues.
Performance Descriptors SC.PD.9.3	
Distinguished	Above Mastery
Students at the distinguished level will construct, test and analyze complex systems, models, and changes across science disciplines; use a technology solution and analyze the science used in the technology; evaluate how a scientific discovery impacts public policy decisions regarding health, population resources and environmental issues.	Students at the above mastery level will construct, test and analyze data to explore systems, models, and changes across science disciplines; analyze technological innovations and identify the science that makes them possible; evaluate the personal and societal benefits of a scientific discovery; assess the impacts of a public policy decision regarding health, population resources or environmental issues.
Mastery	Partial Mastery
Students at the mastery level will test, record and analyze data to explore systems, models, and changes; analyze a technological innovation and identify the science that makes it possible; assess positive outcomes and unintended consequences of a scientific discovery; explain the impacts of a public policy decision regarding health, population resources or environmental issues.	Students at the partial mastery level will test and record data to explore systems, models, and changes; explain a technological innovation and identify the science that makes it possible; identify positive outcomes and unintended consequences of a scientific discovery; identify the impact of a public policy decision regarding health, population resources or environmental issues.
Novice	Students at the novice level will test and record data to explore systems, models or changes; identify a technological innovation and the science that makes it possible; identify positive outcomes or unintended consequences of a scientific discovery; identify the impact of a public policy decision regarding health, population resources or environmental issues.
Objectives	
SC.O.9.3.1	Students will synthesize concepts across various science disciplines to better understand the natural world (e.g., form and function, systems, or change over time).
SC.O.9.3.2	investigate, compare and design scientific and technological solutions to personal and societal problems.
SC.O.9.3.3	communicate experimental designs, results and conclusions using advanced technology tools.
SC.O.9.3.4	collaborate to present research on current environmental and technological issues to predict possible solutions.
SC.O.9.3.5	explore occupational opportunities in science, engineering and technology and evaluate the required academic preparation.
SC.O.9.3.6	given a current science-technology-societal issue, construct and defend potential solutions.

Tenth Grade Science Content Standards and Objectives

The Tenth Grade Science objectives conclude the development of foundational knowledge of biology, chemistry, physics, and the earth and space sciences. Through a spiraling, inquiry-based program of study, all students will demonstrate scientific literacy and use of 21st century skills in the fields of biology, chemistry, physics and earth/environmental science and astronomy. The subject matter is delivered through a coordinated, integrated approach with an emphasis on the development of the major science themes of systems, changes, and models. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50 percent of the instructional time to develop conceptual understanding and research laboratory skills. Safety instruction is integrated in all activities. Building on the knowledge and skills acquired in Ninth Grade Science, students in Tenth Grade Science will expand their depth of understanding of major concepts such as energy transformation qualifications; cellular biology; molecular genetics; embryology; physical, chemical and nuclear changes; fossils and environmental concerns. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade 10 Science				
Standard: 1	Nature of Science			
SC.S.10.1	<p>Students will</p> <ul style="list-style-type: none"> • demonstrate an understanding of history and nature of science as a human endeavor encompassing the contributions of diverse cultures and scientists. • demonstrate the ability to use the inquiry process to solve problems.

Students at the novice level will identify scientific innovations and associate these innovations with the utilization of scientific methodology in advancing societal, cultural or economic issues; conduct experiments utilizing safe procedures and appropriate technology and describe results; differentiate between observations and conclusions.

validate and draw conclusions from experimental results using historical and student collected data and constructed models.	multiple data sources and interpretation of models.	data sources and interpretation of models.	
Objectives Students will			
SC.O.10.1.1	formulate scientific explanations based on historical observations and experimental evidence, accounting for variability in experimental results.		
SC.O.10.1.2	demonstrate how a testable methodology is employed to seek solutions for personal and societal issues (e.g., "scientific method").		
SC.O.10.1.3	relate societal, cultural and economic issues to key scientific innovations.		
SC.O.10.1.4	conduct and/or design investigations that incorporate the skills and attitudes and/or values of scientific inquiry (e.g., established research protocol, accurate record keeping, replication of results and peer review, objectivity, openness, skepticism, fairness, or creativity and logic.)		
SC.O.10.1.5	implement safe procedures and practices when manipulating equipment, materials, organisms, and models.		
SC.O.10.1.6	use appropriate technology solutions within a problem solving setting to measure and collect data, interpret data, analyze and/or report data interact with simulations, conduct research, and present and communicate conclusions.		
SC.O.10.1.7	design, conduct, evaluate and revise experiments (e.g., compose a question to be investigated, design a controlled investigation that produces numeric data, evaluate the data in the context of scientific laws and principles, construct a conclusion based on findings, propose revisions to investigations based on manipulation of variables and/or analysis of error, or communicate and defend the results and conclusions).		
SC.O.10.1.8	draw conclusions from a variety of data sources to analyze and interpret systems and models (e.g., use graphs and equations to measure and apply variables such as rate and scale, evaluate changes in trends and cycles, predict the influence of external variances such as potential sources of error, or interpret maps).

<p>of DNA research; assess the statement "ontogeny recapitulates phylogeny"; construct a simple cladogram; explain interactions among biogeochemical cycles; associate diseases with chemical imbalances; analyze fossil and modern evidence of adaptations in response to changing environments; experimentally determine data to predict trends in characteristics among unknown substances; design experiments to demonstrate the relationships among temperature-pressure-volume and heat in substances during physical/chemical changes; relate the frequency of electromagnetic waves to energy; explain how electricity produces magnetism and how magnets produce electricity; assess error in measuring energy conservation; interpret calculations and graphs of rate, force, momentum, work and time; suggest a simple machine to provide optimum mechanical advantage; measure calculate the spring constant and relate</p>	<p>research leading to current DNA knowledge; compare ontogeny and phylogeny of a variety of animals; interpret a cladogram of a group of organisms; explain interactions between two biogeochemical cycles; describe the role of chemicals in human body systems; trace fossil and modern adaptations in response to changing environments; experimentally determine relationships among substances; experimentally and mathematically validate the relationships among temperature-pressure-volume and heat in substances during physical/chemical changes; calculate the frequency of electromagnetic waves; explain how electricity produces magnetism; describe conservation of all forms of energy; interpret calculations and/or graphs of rate, force, momentum, work and time; compare calculated mechanical advantage of similar simple machines; measure calculate the spring constant; evaluate the gravitational effects of the moon and sun on tidal phenomenon; predict the</p>	<p>heredity; compare ontogeny and phylogeny of an animal; compare traditional and modern classification systems; diagram biogeochemical cycles; describe how human body systems work together; describe fossil and modern adaptations of plant and animal populations to their changing environment; experimentally determine characteristics of substances; mathematically determine the relationships among temperature-pressure-volume and heat in substances during physical/chemical changes; characterize electromagnetic waves and their uses; describe the relationship between electricity and magnetism; quantitatively determine conservation of thermal energy; relate Newton's Laws of Motion to rate, force, momentum, work and time; calculate mechanical advantage of simple machines; compare the effect of different forces on vibrating systems; predict tidal phenomenon; determine impacts of geological and biological processes on climate; explain geological and</p>	<p>properties of DNA; trace ontogeny or phylogeny of an animal; identify a group of organisms whose historical classification has changed; diagram the carbon or nitrogen cycle; explain the interaction of two human body systems; recognize that populations change in response to environmental changes; experimentally determine characteristics of some substances; mathematically determine the relationships among temperature-pressure-volume; list electromagnetic waves and their uses; diagram a magnetic field around an electrical wire; recognize that energy is conserved in transformations; define Newton's Laws of Motion, rate, force, momentum, work and time; calculate mechanical advantage of some simple machines; recognize vibrating systems; explain that the moon causes tides; list geological and biological processes that affect climate; explain some processes that form fossils; state theories of cosmology.</p>	<p>material of heredity; recognize that embryos developmentally change; place organisms in a classification system; diagram the water cycle; identify human body systems; recognize that populations change over time; list characteristics of substances; state relationship among temperature-pressure-volume; list some electromagnetic waves; recognize that electricity and magnetism are interrelated; state that energy is conserved; state the three Laws of Motion; calculate mechanical advantage of a simple machine; recognize a pendulum is an example of a vibrating system; define tides; recognize that geological and biological processes affect climate; explain a process that forms fossils; state a scientifically accepted theory for the origin of the universe.</p>
---	--	---	--	--

to its properties; evaluate multiple gravitational effects of the Earth-Moon system; predict the effects of geological and biological events on climate; critique geological and chemical conditions to predict fossil formation; evaluate theories of cosmology using electromagnetic evidence.	effects of geological or biological event on climate; evaluate conditions necessary for fossil formation; compare theories of cosmology using electromagnetic evidence.	biological processes of fossil formation; explain theories of cosmology using electromagnetic evidence.	
Objectives Students will			
SC.O.10.2.1	relate the structure of cell organelles to their functions.		
SC.O.10.2.2	apply knowledge of cells to variations in cells, tissues, and organs of different organisms.		
SC.O.10.2.3	compare and contrast mechanisms for the movement of materials into and out of cells.		
SC.O.10.2.4	explore the discovery of DNA and its structure; examine nucleotide bonding to the importance of to the double helix structure.		
SC.O.10.2.5	apply DNA analysis to current societal and technological issues (e.g., DNA's role in protein synthesis, heredity, cell division, or cellular functions).		
SC.O.10.2.6	integrate DNA mutations, chromosomal crossing over and linkage with the principles of genetics.		
SC.O.10.2.7	compare the ontogeny and phylogeny using the embryonic development of invertebrate and vertebrate animals.		
SC.O.10.2.8	compare traditional and modern classification systems.		
SC.O.10.2.9	construct a scientific explanation for variation in the species and common ancestors using fossil records, homologous features and selective pressures.		
SC.O.10.2.10	compare and contrast theories for the development, diversity and/or extinction of a species (e.g., natural selection, Lamarckism, or catastrophism).		
SC.O.10.2.11	construct diagrams showing energy flow and cycles of matter between chemical and biological systems including photosynthesis, stored chemical energy, decomposition, carbon and nitrogen cycles.		
SC.O.10.2.12	integrate the human body systems to the functioning of the entire organism.		
SC.O.10.2.13	design an investigation in which the needs of growing plants are determined.		
SC.O.10.2.14	evaluate environmental factors that affect succession, populations and communities.		
SC.O.10.2.15	model the flow of matter and energy flow through the respiration process.		
SC.O.10.2.16	compare and contrast by investigation the properties of solutions including density, conductivity, solubility, concentration, pH and colligative properties.		
SC.O.10.2.17	compare and contrast the characteristics of physical, chemical and nuclear changes/reactions.		
SC.O.10.2.18	determine the relationships among temperature, pressure and volume in gases and interpret graphs that depict these relationships (e.g., Charles' Law, Boyle's Law, Gay-Lussac's Law).		
SC.O.10.2.19	characterize by investigation variance in thermal energy in physical and chemical changes.		
SC.O.10.4.20	compare and contrast the characteristics and uses of electromagnetic waves and relate the frequency of the wave to its application.		
SC.O.10.2.21	correlate the motion of a body to its Doppler shift.		

SC.O.10.2.22	qualitatively explain the relationship between electricity and magnetism.
SC.O.10.2.23	qualitatively and quantitatively describe the conservation of energy (e.g., thermal, chemical, or mechanical).
SC.O.10.2.24	apply Newton's Laws of Motion to depict the relationship among rate, force, momentum, work, and time using kinematics graph and mathematical models.
SC.O.10.2.25	describe and quantify how machines can provide mechanical advantage.
SC.O.10.2.26	determine the effect of different forces on vibrating systems (e.g., pendulums, or springs).
SC.O.10.2.27	apply the characteristics and behaviors of mechanical waves to earth processes.
SC.O.10.2.28	predict the amplitude and frequency of tides using the concepts of gravity and positions of the earth-sun-moon (e.g., spring and neap tides).
SC.O.10.2.29	evaluate the effects of geological events on weather and climate (e.g., volcanism and bolide impact).
SC.O.10.2.30	analyze the effects of mechanical and chemical weathering mechanisms on the earth's surface to produce sediments.
SC.O.10.2.31	relate the theories of electric and magnetic fields to the dynamics of the earth's magnetosphere.
SC.O.10.2.32	examine the effects of plate tectonics on geological and biological processes (e.g., rock cycle and paleo-geography).
SC.O.10.2.33	correlate geological and chemical processes to fossil formation (e.g., petrification, permineralization, or rapid burial).
SC.O.10.2.34	explain theories of cosmology using electromagnetic evidence.

---	---	---	---	---

Objectives	Students will
SC.O.PS.2.1	apply dimensional analysis and scientific notation in making metric calculations.
SC.O.PS.2.2	predict chemical and physical properties of an element using its position in the periodic table.
SC.O.PS.2.3	collect data to infer the relationships among density, mass and volume and apply to earth models: <ul style="list-style-type: none"> • plate tectonics • weather systems • ocean currents
SC.O.PS.2.4	relate molecular motion and the amount of kinetic energy to the temperature of a system.
SC.O.PS.2.5	characterize compounds as ionic, nonpolar covalent or polar covalent and distinguish the difference between molecular and ionic structures.
SC.O.PS.2.6	write formulas and name compounds given oxidation numbers of monatomic and polyatomic ions.
SC.O.PS.2.7	determine the coefficients and classify the reaction type of a chemical equation: <ul style="list-style-type: none"> • synthesis or combination • decomposition • single replacement or double replacement • combustion
SC.O.PS.2.8	cite evidence for the occurrence of a chemical reaction from student generated experimental data: <ul style="list-style-type: none"> • production of color • light • heat • sound • smell • gas • precipitate
SC.O.PS.2.9	qualitatively and quantitatively describe the law of conservation of mass/energy: <ul style="list-style-type: none"> • mechanical • thermal • chemical • electrical • nuclear
SC.O.PS.2.10	compare the types of particles liberated in nuclear decay and interpret half-life graphs: <ul style="list-style-type: none"> • radiometric dating • nuclear medicine • nuclear waste disposal
SC.O.PS.2.11	experimentally demonstrate the relationship between heat and temperature: <ul style="list-style-type: none"> • specific heat • melting point • latent heat

SC.O.PS.2.12	predict, experimentally determine and diagram magnetic fields of magnets.
SC.O.PS.2.13	construct and diagram DC circuits and solve for unknown variables using Ohm's Law and power equations.
SC.O.PS.2.14	qualitatively explain the relationship between electricity and magnetism.
SC.O.PS.2.15	conduct experiments to verify the inverse square relationship between gravity, distance and intensity of light and sound.
SC.O.PS.2.16	experimentally obtain data and apply graphs, vectors and mathematical models to quantify Newton's Laws of motion: <ul style="list-style-type: none"> • velocity • acceleration • force • momentum • time
SC.O.PS.2.17	conduct an experiment to calculate the mechanical advantages, work in/out and efficiencies of simple machines.
SC.O.PS.2.18	design, conduct and analyze experiments to determine variables affecting the period of pendulums.
SC.O.PS.2.19	differentiate between transverse and longitudinal waves and model examples of each type and relate to water, light and sound waves.
SC.O.PS.2.20	examine seismographic and geologic evidence to determine structure, composition and age of the Earth.
SC.O.PS.2.21	predict and present a weather forecast using a weather map and meteorological data.
SC.O.PS.2.22	analyze latitude, altitude and surface features to predict climatic conditions.
SC.O.PS.2.23	research and organize evidence to support the theory and effects of plate tectonics including: <ul style="list-style-type: none"> • density • force • mountain building • fossil • magnetic evidence
SC.O.PS.2.24	apply fusion, heat transfer, gravity, and electromagnetism to the sun's evolution and its impact on the solar system.
SC.O.PS.2.25	investigate theories for the origin and configuration of the solar system: <ul style="list-style-type: none"> • nebular theory • Earth-Moon formation • heliocentric • geocentric models

Biology Content Standards and Objectives

Biology is a course designed for students who desire a broader, in-depth study of the content found in many biological fields of endeavor. This course is designed to build upon and extend the Biology concepts, skills, and knowledge from the science program, using skills for the 21st Century. Students will explore occupational opportunities in health, engineering, and technology and evaluate the required academic preparations while expanding laboratory skills and experiences. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade Ten	Biology

SC.O.B.2.11	analyze karyotypes and pedigrees as diagnostic tools.
SC.O.B.2.12	construct and use models of DNA to explain replication and mutations.
SC.O.B.2.13	differentiate the structure and function of messenger, transfer and ribosomal RNA in the process of transcription and translation.
SC.O.B.2.14	research and debate the application of DNA technology in the context of social, ethical, and political issues.
SC.O.B.2.15	evaluate the evidence for natural selection including: <ul style="list-style-type: none"> • speciation • fossil record evidence • molecular similarities • homologous structures.
SC.O.B.2.16	evaluate the influence of the historical social context on the development of evolutionary theory.
SC.O.B.2.17	compare morphological, cladistic and other classification systems including domains, kingdoms and other taxa.
SC.O.B.2.18	justify the placement of viruses in classification systems.
SC.O.B.2.19	examine the cycle of viruses and compare disease prevention: <ul style="list-style-type: none"> • vaccinations

	<ul style="list-style-type: none"> • vector control • drug therapy.
SC.O.B.2.20	evaluate environmental factors that affect succession, populations and communities.
SC.O.B.2.21	propose ecosystem models that incorporate interactions of biotic and abiotic environmental variables in biogeochemical cycles.
SC.O.B.2.22	interpret changes in energy as it flows through an ecosystem to illustrate conservation of energy in the energy pyramid, food web, and food chain.
SC.O.B.2.23	<p>analyze interrelationships of organisms within an ecosystem</p> <ul style="list-style-type: none"> • competition • predation • symbiosis <ul style="list-style-type: none"> ○ commensalism ○ mutualism ○ parasitism.
SC.O.B.2.24	analyze graphs, GIS data and traditional maps reflecting changes in population to predict limiting factors in ecosystems as they determine carrying capacity.

Conceptual Biology Content Standards and Objectives

Conceptual Biology is an introductory course designed for students who are interested in the field of technical biology which will give them the scientific knowledge, opportunities to develop the inquiry, problem solving skills, and decision making abilities necessary for their future vocation. Conceptual Biology is an alternative to Biology and is designed to prepare students for entry-level careers, using skills for the 21st Century. Students will explore occupational opportunities in health, engineering, and technology and evaluate the required academic preparations while expanding their knowledge and laboratory experiences. The course will provide an in-depth study in the chemical nature of life, cellular functions, microbiology, ecology, biotechnology, zoology and botany with an emphasis on application. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Biology II Content Standards and Objectives

Biology II is an advanced course that is an elective designed for students who have completed Biology or Conceptual Biology and desire an in-depth and rigorous study of the content found in many biological fields of endeavor. This course is designed to build upon and extend the Biology and Conceptual Biology concepts, skills and knowledge from a science program, using skills for the 21st Century. Students interested in health and scientific related careers will build and expand their laboratory skills and experiences. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade 11/12 Biology II		Nature of Science			
Standard 1	Students will				
SC.S.BII.1	<ul style="list-style-type: none"> demonstrate an understanding of history and nature of science as a human endeavor encompassing the contributions of diverse cultures and scientists. demonstrate the ability to use the inquiry process to solve problems.

Biology II students at the distinguished level will analyze the importance of scientific innovation and relate these innovations to the utilization of scientific methodology, variability in experimental results to advances in societal, cultural and economic issues; design, conduct, communicate, evaluate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from multiple data sources and interpretation of models.	Biology II students at the above mastery level will analyze the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural and economic issues; use scientific methodology to design, conduct, communicate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from multiple data source and models.	Biology II students at the mastery level will examine the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural and economic issues; use scientific methodology to conduct, communicate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from data sources and models.	Biology II students at the partial mastery level will describe the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural or economic issues; use scientific methodology to conduct and communicate experiments utilizing safe procedures and appropriate technology; select an appropriate conclusion from a list of possible conclusions drawn from experimental data.	Biology II students at the novice level will identify the importance of scientific innovation and associate these innovations with advances in societal, cultural or economic issues; conduct experiments utilizing safe procedures and appropriate technology; differentiate between observations and conclusions.	
Objectives		Students will			

SC.O.BII.1.1	formulate scientific explanations based on historical observations and experimental evidence, accounting for variability in experimental results.
SC.O.BII.1.2	demonstrate how a testable methodology is employed to seek solutions for personal and societal issues (e.g., "scientific method").
SC.O.BII.1.3	relate societal, cultural and economic issues to key scientific innovations.
SC.O.BII.1.4	conduct and/or design investigations that incorporate the skills and attitudes and/or values of scientific inquiry (e.g., established research protocol, accurate record keeping, replication of results and peer review, objectivity, openness, skepticism, fairness, or creativity and logic).
SC.O.BII.1.5	implement safe procedures and practices when manipulating equipment, materials, organisms, and models.
SC.O.BII.1.6	use appropriate technology solutions with a problem solving setting to measure and collect data, interpret data, analyze and/or report data, interact with simulations, conduct research, and present and communicate conclusions.
SC.O.BII.1.7	design, conduct, evaluate and revise experiments (e.g., compose a question to be investigated, design a controlled investigation that produces numeric data, evaluate the data in the context of scientific laws and principles, construct a conclusion based on findings, propose revisions to investigations based on manipulation of variables and/or analysis of error, or communicate and defend the results and conclusions).
SC.O.BII.1.8	draw conclusions from a variety of data sources to analyze and interpret systems and models (e.g., use graphs and equations to measure and apply variables such as rate and scale, evaluate changes in trends and cycles, or predict the influence of external variances such as potential sources of error, or interpret maps).

<p>calculate the probability of phenotypic ratios of crosses involving pleiotropy, epistasis, multiple alleles and polygenic inheritance; examine the evidence that some viruses cause cancer; examine the importance of protists in scientific research in particularly microbiology; evaluate benefits and detriments of fungi to humans; evaluate the evidence of the evolutionary success of angiosperms; explain how primitive animals may have evolved from unicellular organisms; explain how the embryonic development of animals provide evidence of a shared ancestry; examine the roles of innate and learned animal behaviors in the evolution of a species.</p>	<p>compare and contrast historical and current treatments for varying viral infections; analyze the criteria for classifications of protists; compare the life cycle of zygomycetes, basidiomycetes, and ascomycetes; examine the differences between gymnosperms and angiosperms; analyze the similarities and differences of invertebrates and vertebrates; examine the common stages of embryonic development of animals; examine the historical study of innate and learned animal behaviors.</p>	<p>epistasis, multiple alleles and polygenic inheritance; evaluate treatment of viral diseases based on lytic and lysogenic cycles; analyze the criteria for classifications of protists; survey the fungi kingdom; compare and contrast members of the plant kingdom in terms of their reproductive systems; compare and contrast members of the animal kingdom in terms of their complexity (e.g., tissues, nervous and digestive systems); survey embryonic development of animals including gastrulation, development of different body cavities, and tissues develop from germ layers; examine types of innate and learned animal behaviors.</p>	<p>criteria for classifications of protists; describe the role of fungi mycorrhizae and lichens in the ecosystem; describe the alternation of generations in the sexual reproduction of plants; describe the differences in body structure and support, symmetry and segmentation in invertebrates and vertebrates; outline the embryonic development of animals from fertilization to embryo; compare and contrast innate and learned animal behaviors.</p>	<p>to embryo; identify type of innate behaviors and types of learned animal behaviors.</p>
Objectives				
SC.O.BII.2.1	Students will correlate functional groups to unique properties of organic molecules to biochemical pathways.			
SC.O.BII.2.2	describe the transfer of energy during condensation and hydrolysis reactions of organic molecules (e.g., ATP, enzyme substrate and active site).			
SC.O.BII.2.3	summarize the electrochemical gradients in various cells and their corresponding environments.			
SC.O.BII.2.4	analyze the properties of water and its importance in biological systems (e.g., polarity, solubility, specific heat, pH, and buffers).			
SC.O.BII.2.5	examine the flow of energy through specific molecules in light dependent and light independent photosynthesis reactions, glycolysis, Krebs' cycle, EPS, and fermentation.			
SC.O.BII.2.6	interpret important research leading to the current knowledge of molecular genetics (e.g., Griffith, Avery, Hershey & Chase, Chargaff, Franklin & Wilkins and Watson & Crick).			
SC.O.BII.2.7	explain the use of restriction enzymes, vectors, plasmids and probes in recombinant DNA.			
SC.O.BII.2.8	conduct and interpret DNA investigations such as RFLP and PCR.			
SC.O.BII.2.9	analyze the process of DNA replication including DNA polymerase, semi-conservative replication and base-pairing.			
SC.O.BII.2.10	apply the processes of transcription and translation to gene expression.			

SC.O.BII.2.11	demonstrate the role of DNA in determining phenotype and illustrate ways of controlling and regulating expression and function of genes.
SC.O.BII.2.12	distinguish between chromosomal and gene mutations and their potential effects.
SC.O.BII.2.13	analyze a karyotype to determine chromosomal abnormalities.
SC.O.BII.2.14	predict phenotypic ratios of crosses involving pleiotropy, epistasis, multiple alleles and polygenic inheritance.
SC.O.BII.2.15	evaluate treatment of viral diseases based on lytic and lysogenic cycles.
SC.O.BII.2.16	analyze the criteria for classifications of protists (e.g., motility, cellular structures, reproduction, energy sources).
SC.O.BII.2.17	survey the fungi kingdom (e.g., characteristics, reproduction, relationship to humans and the ecosystem).
SC.O.BII.2.18	compare and contrast members of the plant kingdom in terms of their reproductive systems.
SC.O.BII.2.19	compare and contrast members of the animal kingdom in terms of their complexity (e.g., tissues, nervous and digestive systems).
SC.O.BII.2.20	survey embryonic development of animals including gastrulation, development of different body cavities, and tissues develop from germ layers.
SC.O.BII.2.21	examine types of innate and learned animal behaviors (e.g., competitive, reproductive, social, cyclic, and communication).

Grade 11/12	Biology II
Standard 3	Application of Science
SC.S.BII.3	<p>Students will</p> <ul style="list-style-type: none"> • demonstrate the ability to use inquiry process to explore systems, models and changes. • demonstrate an understanding of the interdependence between science and technology. • demonstrate an understanding of the utilization of technology to gather data and communicate designs, results and conclusions. • demonstrate the ability to evaluate personal and societal benefits, the impact of different points of view, predict the long-term societal impact and an understanding of public policy decisions as related to health, population, resource and environmental issues.

SC.O.BII.3.1	synthesize concepts across various science disciplines to better understand the natural world (e.g., form and function, systems, and change over time).			
SC.O.BII.3.2	investigate, compare and design scientific and technological solutions to address personal and societal problems.			
SC.O.BII.3.3	communicate experimental designs, results and conclusions using advanced technology tools.			
SC.O.BII.3.4	collaborate to present research on current environmental and technological issues to predict possible solutions.			
SC.O.BII.3.5	explore occupational opportunities in science, engineering and technology and evaluate the required academic preparation.			
SC.O.BII.3.6	given current science-technology-societal issues, construct and defend potential solutions.			

Chemistry Content Standards and Objectives

Chemistry is an advanced level course designed for students who desire a broader, in-depth study of the content found in the science field of chemistry. Chemistry is the study of matter, its composition and its changes. This course is designed to build upon and extend the Chemistry concepts, skills and knowledge from the science program using skills for the 21st century. This course is designed to prepare a student for college chemistry, requiring a strong mathematical base. The relationship between chemistry concepts and mathematics will be emphasized. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Grade Eleven	Chemistry				
Standard: 1	Nature of Science				
SC.S.C.1	Students will <ul style="list-style-type: none"> demonstrate an understanding of history and nature of science as a human endeavor encompassing the contributions of diverse cultures and scientists. demonstrate the ability to use the inquiry process to solve problems. 				
Performance Descriptors SC.PD.C.1					
Distinguished	Above Mastery	Mastery	Partial Mastery	Novice	
Chemistry students at the distinguished level will analyze the importance of scientific innovation and relate these innovations to the utilization of scientific methodology, variability in experimental results to advances in societal, cultural and economic issues; design, conduct, communicate, evaluate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from multiple data sources and interpretation of models.	Chemistry students at the above mastery level will analyze the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural and economic issues; use scientific methodology to design, conduct, communicate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from multiple data sources and models.	Chemistry students at the mastery level will examine the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural and economic issues; use scientific methodology to conduct, communicate and revise experiments utilizing safe procedures and appropriate technology; draw conclusions from data sources and models.	Chemistry students at the partial mastery level will describe the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural or economic issues; use scientific methodology to conduct and communicate experiments utilizing safe procedures and appropriate technology; select an appropriate conclusion from a list of possible conclusions drawn from experimental data.	Chemistry students at novice level will identify the importance of scientific innovation and associate these innovations with advances in societal, cultural or economic issues; conduct experiment utilizing safe procedures and appropriate technology; differentiate between observations and conclusions.	
Objectives	Students will				

SC.O.C.1.1	formulate scientific explanations based on historical observations and experimental evidence, accounting for variability in experimental results.
SC.O.C.1.2	demonstrate how a testable methodology is employed to seek solutions for personal and societal issues (e.g., "scientific method").
SC.O.C.1.3	relate societal, cultural and economic issues to key scientific innovations.
SC.O.C.1.4	conduct and conduct and/or design investigations that incorporate the skills and attitudes and/or values of scientific inquiry (e.g., established research protocol, accurate record keeping, replication of results and peer review, objectivity, openness, skepticism, fairness, or creativity and logic.
SC.O.C.1.5	implement safe procedures and practices when manipulating equipment, materials, organisms, and models.
SC.O.C.1.6	use appropriate technology solutions within a problem solving setting to measure and collect data, interpret data, analyze and/or report data, interact with simulations, conduct research, and present and communicate conclusions.
SC.O.C.1.7	design, conduct, evaluate and revise experiments (e.g., compose a question to be investigated, design a controlled investigation that produces numeric data, evaluate the data in the context of scientific laws and principles, construct a conclusion based on findings, or propose revisions to investigations based on manipulation of variables and/or analysis of error; communicate and defend the results and conclusions).
SC.O.C.1.8	draw conclusions from a variety of data sources to analyze and interpret systems and models (e.g., use graphs and equations to measure and apply variables such as rate and scale, evaluate changes in trends and cycles, predict the influence of external variances such as potential sources of error, or interpret maps).

Grade Eleven Chemistry	
Standard 2 Content of Science	
SC.S.C.2	Students will <ul style="list-style-type: none"> demonstrate knowledge, understanding and applications of scientific facts, concepts, principles, theories and models as delineated in the objectives. demonstrate an understanding of the interrelationships among physics, chemistry, biology, earth/environmental science and astronomy. apply knowledge, understanding and skills of science subject matter/concepts to daily life experiences.

Chemistry students at the distinguished level will quantitatively determine the identity of a substance using physical properties such as density, melting points, specific heat, etc; develop a historical timeline and describe the evolution of the atomic theory based on the contributions of	Chemistry students at the above mastery level will qualitatively identify a substance by its physical and chemical properties; research the experimental procedures that lead to evidence of atomic theory; apply the Pauli Exclusion Principle to delimit the number of electrons
Mastery	Partial Mastery
Chemistry students at the mastery level will classify pure substances by their chemical and physical properties; research and evaluate the contributions of Dalton, Bohr, Heisenberg and Schrödinger to the evolution of the atomic theory; determine the proper set of quantum	Chemistry students at the partial mastery level will list the physical properties of a given pure substance; research the contributions of Dalton, Bohr, Heisenberg, and Schrödinger to the evolution of the atomic theory; determine shape (s, p, d, f) from the element's place on
Novice	Chemistry students at the novice level will define pure substances and chemical and physical properties; describe the limitations of Dalton's model in light of modern evidence; use data obtained from the periodic table to determine proton, neutron, and electron count; produce electron

<p>Dalton, Crookes, Thomson, Rutherford, Planck, Bohr, Einstein, deBroglie, Heisenberg, and Schrödinger; discuss the probabilistic shapes and energy content of s, p, d, and f orbitals and their relevance to shapes of molecular compounds; produce specified excited-state electron configurations for the element carbon and predict the bonding possibilities from the configuration; illustrate Lewis' dot structure for polyatomic ions and organic functional groups; generate the correct molecular formula and communicate the correct name for the aliphatic hydrocarbons; interpret periodic trends to create graphs and make inferences and predictions; predict the type of bonding that occurs between two nonmetallic elements and describe the polarity of the bonds; construct models of organic molecules and apply electronegativity values to classify the molecules as polar or nonpolar; given the reactants, anticipate the products and create balanced equations for the five general types of</p>	<p>occurring in any one orbital; produce electron configurations for ions and identify the element with which it is isoelectronic; illustrate Lewis' dot structures for ionic compounds and covalent molecules; generate the correct molecular formula for binary and oxy-acids and communicate the correct names; interpret periodic trends to create graphs and make inferences and predictions; predict the type of bonding that occurs between metallic and nonmetallic elements and write ionic formulas; construct models of organic molecules and apply electronegativity values to classify the bonds as polar and nonpolar; given the reactants, anticipate the products and create balanced equations for the five general types of chemical reactions; determine experimentally the effects of temperature and concentration on solution properties; calculate the quantities of energy required for exothermic and endothermic reactions; generate multi step mole conversions that require</p>	<p>numbers (n, l, ml, and ms) for any electron in any given element and apply those numbers to what they represent in quantum theory; produce electronic configurations and orbital diagrams for any element on the periodic table and predict the chemical properties of the element from the electron configuration; illustrate Lewis' dot structures for representative (main group) elements; generate the correct formula and/or name ionic or molecular compound analyze periodic trends in atomic size, ionic size, electronegativity ionization energy and electron affinity; predict the type of bonding that occurs between atoms and characterize the properties of the ionic, covalent or metallic substances; construct models to explain the structure and geometry of organic and inorganic molecules; given the reactants, anticipate the products and create balanced equations for the five general types of chemical reactions; determine experimentally the effects of temperature</p>	<p>the periodic table; produce electron configurations for elements with atomic number 1-54 and predict the chemical properties of the element from the electron configuration; match a Bohr model to the Lewis' dot structure for representative elements; generate the correct ionic or molecular formula and communicate the correct name for binary compounds to include roman numerals or prefixes as needed; compare two elements and describe differences in atomic size, ionic size, and ionization energy; define ionic, covalent and metallic bonds; differentiate among linear, trigonal planar, and tetrahedral shapes; write balanced equations when reactants and products are given and classify the reaction type; describe properties of solutions; classify reactions as exothermic and endothermic reactions; write conversion factors; perform calculations using Boyle's, Charles' or Gay-Lussac's Laws; calculate molarity and percentage composition; define Arrhenius and Bronsted-Lowry acids; select an appropriate</p>	<p>configurations for elements with atomic number 1-18 and predict the chemical properties of the element from the electron configuration; identify the number of valence electrons in atoms of representative metals and nonmetals; classify compounds as ionic w/main group elements, ionic w/transition metals, covalent molecules, or acids; distinguish between metals and nonmetals and describe the differences in their ionization energy; classify elements as metallic or nonmetallic; construct ball and stick models for simple molecules differentiate between organic and inorganic compounds; write balanced equations when reactants and products are given; define solute, solvent and solution; define exothermic and endothermic reactions; define the mole; identify pressure, temperature, and volume units; define molarity; classify solutions as acidic or basic; define pH; observe and record the pH of a solution; define polarity.</p>
--	---	--	---	--

<p>chemical reaction; determine experimentally the effects of temperature and concentration on solution properties; experimentally determine the quantities of energy required for exothermic and endothermic reactions; generate complex mole conversions that require three or more conversion factors; predict the behavior of an ideal gas and identify the reasons that real gasses do not react in the same way; perform all calculations that use the mole as a conversion factor; justify that the net ionic equation for the combination of a strong acid and a strong base is always the same; evaluate the appropriate use of technology in determining pH values and measuring equivalence points; predict the pH and/or pOH of a solution following a partial neutralization; identify the intermolecular forces between molecules as London dispersion, dipole-dipole and hydrogen.</p>	<p>three or more conversion factors; predict the outcome of changing a variable in a gaseous system and calculate the value of the responding variable; perform all calculations that use the mole as a conversion factor; balance equations that contain acids and bases as reactants; predict the color change of an indication given its starting and pH during a titration; conduct a neutralization experiment to construct a titration curve; investigate the solubility of various materials in water.</p>	<p>and concentration on solution properties; classify reactions as exothermic and endothermic reactions by the direction of heat flow in a chemical reaction; generate mole conversions that demonstrate the ability to convert from one type of quantity to another; perform calculations using the combined gas laws; perform the following "mole" calculations: molarity, percentage composition, empirical and molecular formula, formulas of hydrates and theoretical yield; compare and contrast the Arrhenius and Bronsted-Lowry definitions of acids and bases; compare methods of measuring pH; conduct a neutralization experiment to determine an unknown molarity, investigate and explain the water's role as a solvent based upon principles of polarity of substances..</p>	<p>indicator given the pH range of a solution; define neutralization in terms of mole equality; illustrate water as a polar molecule.</p>
<p>Objectives Students will</p>			
SC.O.C.2.1	classify pure substances by their chemical and physical properties.		
SC.O.C.2.2	research and evaluate the contributions of Dalton, Bohr, Heisenberg, and Schrödinger to the evolution of the atomic theory.		
SC.O.C.2.3	determine the proper set of quantum numbers (n , l , m_l , and m_s) for any electron in any given element.		
SC.O.C.2.4	produce electron configurations and orbital diagrams for any element on the periodic table and predict the chemical properties of the element from the electron configuration.		

SC.O.C.2.5	illustrate Lewis' dot structures for representative (main group) elements.
SC.O.C.2.6	generate the correct formula and/or name for ionic and molecular compounds.
SC.O.C.2.7	analyze periodic trends in atomic size, ionic size, electronegativity, ionization energy and electron affinity.
SC.O.C.2.8	predict the type of bonding that occurs between atoms and characterize the properties of the ionic, covalent or metallic substances.
SC.O.C.2.9	construct models to explain the structure and geometry of organic and inorganic molecules.
SC.O.C.2.10	given the reactants, anticipate the products and create balanced equations for the five general types of chemical reactions (e.g., synthesis or combination, decomposition, single replacement, or double replacement and combustion).
SC.O.C.2.11	determine experimentally the effects of temperature and concentration on solution properties (e.g., solubility, conductivity, density and colligative properties).
SC.O.C.2.12	classify reactions as exothermic and endothermic reactions by the direction of heat flow in a chemical reaction.
SC.O.C.2.13	generate mole conversions that demonstrate the ability to convert from one type of quantity to another (e.g., mass to number of particles, number of particles to volume, or volume to mass).
SC.O.C.2.14	perform calculations using the combined gas laws.
SC.O.C.2.15	perform the following "mole" calculations: molarity, percentage composition, empirical and molecular formula, formulas of hydrates and theoretical yield.
SC.O.C.2.16	compare and contrast the Arrhenius and Bronsted-Lowry definitions of acids and bases.
SC.O.C.2.17	compare methods of measuring pH (e.g., indicators, indicator papers, or pH meters).
SC.O.C.2.18	predict the product of an acid-base reaction.
SC.O.C.2.19	investigate and explain water's role as a solvent based upon principles of polarity of substances.

Grade Eleven	Chemistry
Standard 3	Application of Science
SC.S.C.3	Students will <ul style="list-style-type: none"> • demonstrate the ability to use inquiry process to explore systems, models, and changes. • demonstrate an understanding of the interdependence between science and technology. • demonstrate an understanding of the utilization of technology to gather data and communicate designs, results and conclusions. • demonstrate an understanding of personal and societal benefits of science, and an understanding of public policy decisions as related to health, population, resource and environmental issues.

Conceptual Chemistry Content Standards and Objectives

Conceptual Chemistry is an introductory level course designed for students in the skilled pathway who desire an alternative to a traditional college preparatory course emphasizing real life applications of chemical principles. Mathematical based problem solving is de-emphasized. Conceptual Chemistry is the study of matter, its composition and its changes. Emphasis is placed on the important role chemistry plays in a student's personal life, career opportunities, environment and society while developing 21st century skills. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Novice	Conceptual Chemistry
student at the novice level will define chemical and physical properties; define pure substance and mixture; define metals, nonmetals and metalloids; define states of matter; identify pressure, temperature and volume	

<p>of metals, nonmetals and metalloids; predict relative velocities of molecules with different masses at the same temperature; predict the behavior of an ideal gas and identify the reasons that real gasses do not react in the same way; produce and use electron configurations to predict the chemical properties of elements; generate the correct molecular formula for binary and oxy-acids and communicate the correct names; predict the type of bonding that occurs between atoms and characterize the properties of the ionic, covalent or metallic substances; given the reactants, anticipate the products and create balanced equations for the chemical reactions; utilize effective nuclear charge and electron pairing to explain deviations from general trends in ionization energies; illustrate Lewis' dot structures for polyatomic ions and organic functional groups; generate complex mole conversions that require three or more conversion factors; perform all calculations that use the mole as a conversion factor;</p>	<p>common objects based on their composition; use the kinetic molecular theory to explain changes of state at the molecular level; predict the outcome of changing a variable in a gaseous system and calculate the value of the responding variable; match the changes in chemical properties to the changes in electron configuration for elements in a period; generate the correct ionic or molecular formula and communicate the correct name for the compound to include roman numerals or prefixes as needed; predict the type of bonding that occurs between atoms and characterize the properties of the ionic, covalent or metallic substances; given the reactants, anticipate the products and create a balanced equations for the five general types of chemical reactions; utilize effective nuclear charge and electron energy states to explain trends in atomic size, ionic size, and ionization energies; illustrate Lewis' dot structures for ionic compounds and covalent molecules; generate multi step mole conversions that</p>	<p>nonmetal and metalloids; use the kinetic molecular theory to explain states of matter; perform calculations using the combined gas laws; produce and use electron configurations to explain chemical properties; generate the correct formula and/or name for simple ionic and molecular compounds; predict the type of bonding that occurs between atoms and characterize the properties of the ionic, covalent or metallic substances; given the reactants, anticipate the products and create balanced equations for the five general types of chemical reactions; analyze the periodic table to predict trends in atomic size, ionic size, electronegativity, ionization energy and electron affinity; illustrate Lewis' dot structures for representative elements; generate mole conversions that demonstrate the ability to convert from one type of quantity to another; perform the following "mole" calculations: molarity, percentage composition, empirical and molecular formula, formulas of hydrates and theoretical</p>	<p>locations on the periodic table; illustrates the states of matter at the molecular level; perform calculation for Boyle's, Charles' and/or Gay Lussac's law; produce an electron configuration; generate the correct formula or name for simple ionic and molecular compounds; define ionic, covalent and metallic bonds; given the formulas, place the coefficient to balance the chemical equation; compare two elements and describe differences in atomic size, ionic size, and ionization energy; match a Bohr model to the Lewis' dot structure for representative elements; write conversion factors; calculate molarity and percentage composition; differentiate among linear, trigonal planar, and tetrahedral shapes; describe properties of solutions; select an appropriate indicator given the pH range of a solution; define neutralization in terms of mole equality; illustrate water as a polar molecule; define Arrhenius and Bronsted-Lowry acids; classify reactions as exothermic and endothermic reactions.</p>	<p>units; match an element to its group and period on the periodic table; recognize that placement on the periodic table determines the common ionic charge of representative elements; classify elements as metallic or nonmetallic; identify the type of chemical reaction; distinguish between metals and nonmetals and describe the differences in their ionization energy; identify the number of valence electrons in atoms of representative metals and nonmetals; define the mole; calculate molar mass; construct ball and stick models for simple molecules; define solute, solvent and solution; define pH; observe and record the pH of a solution; define polarity; classify solutions as acidic or basic; define exothermic and endothermic reactions.</p>
---	--	--	---	--

<p>construct models of organic molecules and apply electronegativity values and molecular shape to classify the molecules as polar or nonpolar; determine experimentally the effects of temperature and concentration on solution properties; evaluate the appropriate use of technology in determining pH values and measuring equivalence points; conduct a neutralization experiment to determine an unknown molarity or volume; identify the intermolecular forces between molecules as London dispersion, dipole-dipole and hydrogen; justify that the net ionic equation for the combination of a strong acid and a strong base is always the same; calculate the enthalpy of reactions using Hess's Law and identify as being exothermic or endothermic.</p>	<p>require three or more conversion factors; perform all calculations that use the mole as a conversion factor; construct models of organic molecules and apply electronegativity values to classify the bonds as polar or nonpolar; determine experimentally the effects of temperature and concentration on solution properties; predict the color change of an indicator given its starting and ending pH during a titration; conduct a neutralization experiment to determine an unknown molarity or volume; investigate the solubility of various materials in water; balance equations that contain acids and bases as reactants; interpret a phase change diagram to calculate the heat flow.</p>	<p>yield; construct models to explain the structure and geometry of organic and inorganic molecules; determine experimentally the effects of temperature and concentration on solution properties; compare methods of measuring pH; conduct a neutralization experiment to determine an unknown molarity; investigate and explain the water's role as a solvent based upon principles of polarity of substances; compare and contrast the Arrhenius and Bronsted-Lowery definitions of acids and bases; classify reactions as exothermic and endothermic reactions by the direction of heat flow in a chemical reaction.</p>	
<p>SC.O.CC.2.1</p>	<p>Students will classify pure substances by their chemical and physical properties.</p>		
<p>SC.O.CC.2.2</p>	<p>classify examples of matter as pure substance or mixture.</p>		
<p>SC.O.CC.2.3</p>	<p>compare and contrast the properties of metals, nonmetals and metalloids.</p>		
<p>SC.O.CC.2.4</p>	<p>use the kinetic molecular theory to explain states of matter.</p>		
<p>SC.O.CC.2.5</p>	<p>perform calculations using the combined gas laws.</p>		
<p>SC.O.CC.2.6</p>	<p>produce and use electron configuration to explain chemical properties of elements.</p>		
<p>SC.O.CC.2.7</p>	<p>generate the correct formula and/or name for ionic and molecular compounds.</p>		
<p>SC.O.CC.2.8</p>	<p>predict the type of bonding that occurs between atoms and characterize the properties of the ionic, covalent or metallic bond formed.</p>		
<p>SC.O.CC.2.9</p>	<p>given the reactants, anticipate the products and create balanced equations for the five general types of chemical reactions (e.g., synthesis or combination, decomposition, single replacement, or double replacement and combustion).</p>		

SC.O.CC.2.10	analyze the periodic table to predict trends in atomic size, ionic size, electronegativity, ionization energy and electron affinity
SC.O.CC.2.11	illustrate Lewis' dot structures for representative (main group) elements.
SC.O.CC.2.12	generate mole conversions that demonstrate the ability to convert from one type of quantity to another (e.g., mass to number of particles, number of particles to volume, or volume to mass).
SC.O.CC.2.13	perform the following "mole" calculations: <ul style="list-style-type: none"> • molarity • percentage composition • empirical and molecular formula • formulas of hydrates • theoretical yields.
SC.O.CC.2.14	construct models to explain the structure and geometry of organic and inorganic molecules and the lattice structures of crystals.
SC.O.CC.2.15	determine experimentally the effects of temperature and concentration on solution properties (e.g., solubility, conductivity, or density and colligative properties).
SC.O.CC.2.16	compare methods of measuring pH (e.g., indicators, indicator papers, or pH meters).
SC.O.CC.2.17	investigate and explain water's role as a solvent based upon principles of polarity of substances.
SC.O.CC.2.18	compare and contrast the Arrhenius and Bronsted-Lowry definitions of acids and bases.
SC.O.CC.2.19	classify reactions as exothermic and endothermic reactions by the direction of heat flow in a chemical reaction.
SC.O.CC.2.20	given the reactants, anticipate the products and create balanced equations for nuclear reactions.

Grade Eleven	Conceptual Chemistry			
Standard 3	Application of Science			
SC.S.CC.3	Students will <ul style="list-style-type: none"> • demonstrate the ability to use inquiry process to explore systems, models, and changes. • demonstrate an understanding of the interdependence between science and technology. • demonstrate an understanding of the utilization of technology to gather data and communicate designs, results and conclusions. • demonstrate an understanding of personal and societal benefits of science, and an understanding of public policy decisions as related to health, population, resource and environmental issues

Objectives	Students will			
SC.O.CC.3.1	synthesize concepts across various science disciplines to better understand the natural world (e.g., form and function, or systems and change over time).			
SC.O.CC.3.2	investigate, compare and design scientific and technological solutions to address personal and societal problems.			
SC.O.CC.3.3	communicate experimental designs, results and conclusions using advanced technology tools.			
SC.O.CC.3.4	collaborate to present research on current environmental and technological issues to predict possible solutions.			
SC.O.CC.3.5	explore occupational opportunities in science, engineering and technology and evaluate the required academic preparation.			
SC.O.CC.3.6	given a current science-technology-societal issue, construct and defend potential solutions.			

Chemistry II Content Standards and Objectives

Chemistry II is an advanced level course that is an elective designed for students who have completed Chemistry and desire a broader, in-depth study of the content found in the science field of chemistry. Chemistry is the study of matter, its composition and its changes. This course is designed to prepare students to be critical and independent thinkers who are able to function effectively in a scientific and technological society, and to build upon and extend the chemistry concepts, skills and knowledge from the previous chemistry class. This course is designed not only to prepare a student for college chemistry but to make the college chemistry experience much easier as the student will have already studied much of the material reserved for college chemistry at the high school level. Students will engage in active inquiries, investigations and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates and 21st Century skills, technology tools and content standards and objectives.

Grade Twelve		Chemistry II	
Standard 1		Natural Science	
SC.S.CII.1	Students will <ul style="list-style-type: none"> • demonstrate an understanding of history and nature of science as a human endeavor encompassing the contributions of diverse cultures and scientists. • demonstrate the ability to use the inquiry process to solve problems.

Partial Mastery Chemistry II students at the partial mastery level will describe the importance of scientific innovation and recognize the role of these innovations in advancing societal, cultural or economic issues; use scientific methodology to conduct and communicate experiments utilizing the safe procedures and appropriate technology; select an appropriate conclusion from a list of possible conclusions drawn from experimental data.
			Novice Chemistry II students at the novice level will identify the importance of scientific innovation and associate these innovations with advances in societal, cultural or economic issues; conduct experiment utilizing safe procedures and appropriate technology; differentiate between observations and conclusions.

Interpretation of models.	
Objectives	Students will
SC.O.CII.1.1	formulate scientific explanations based on historical observations and experimental evidence, accounting for variability in experimental results.
SC.O.CII.1.2	demonstrate how a testable methodology is employed to seek solutions for personal and societal issues (e.g., "scientific method").
SC.O.CII.1.3	relate societal, cultural and economic issues to key scientific innovations.
SC.O.CII.1.4	conduct and/or design investigations that incorporate the skills and attitudes and/or values of scientific inquiry (e.g., established research protocol, accurate recording keeping, replication of results and peer review, objectivity, openness, skepticism, fairness, or creativity and logic).
SC.O.CII.1.5	implement safe procedures and practices when manipulating equipment, materials, organisms, and models.
SC.O.CII.1.6	use appropriate technology solutions within a problem solving setting to measure and collect data, interpret data, analyze and/or report data, interact with simulations, conduct research, and present and communicate conclusions.
SC.O.CII.1.7	design, conduct, evaluate and revise experiments (e.g., compose a question to be investigated, design a controlled investigation that produces numeric data, evaluate the data in the context of scientific laws and principles, construct a conclusion based on findings, or propose revisions to investigations based on manipulation of variables and/or analysis of error; communicate and defend the results and conclusions).
SC.O.CII.1.8	draw conclusions from a variety of data sources to analyze and interpret systems and models (e.g., use graphs and equations to measure and apply variables such as rate and scale, evaluate changes in trends and cycles, predict the influence of external variances such as potential sources of error, or interpret maps).

Grade Twelve	
Standard: 2	Content of Science
SC.O.CII.2	Students will <ul style="list-style-type: none"> demonstrate knowledge, understanding and applications of scientific facts, concepts, principles, theories and models as delineated in the objectives. demonstrate an understanding of the interrelationships among physics, chemistry, biology, earth/environmental sciences and astronomy. apply knowledge, understanding and skills of science subject matter/concepts to daily life experiences.

	Partial Mastery
	Chemistry II students at the partial mastery level will match types of binding forces; describe valence bond; explain the ideal gas laws on the basis of the kinetic-molecular theory; generalize Avogadro's hypothesis and its relation
	Novice
	Chemistry II students at the novice level will list types of binding forces; describe valence bonds; state the ideal gas laws and describe their basis on kinetic molecular theory; quote Avogadro's hypothesis; identify changes of state;

<p>interpret Avogadro's hypothesis and relationship to the mole concept; evaluate changes of state; design an experiment to illustrate the effect of changing concentration on the colligative properties of solutions; use calculations to evaluate results; predict the voltage using the Nernst equations and use this to design an effective battery; evaluate systems based on the physical and chemical dynamic equilibrium concepts; calculate equilibrium constants and apply Le Chatelier's principle to predict the effect of changes on systems and to the design of systems that favor a particular direction; design and conduct experiments to collect and graphically analyze data to investigate reaction; design and conduct experiments to; demonstrate applications of Hess's Law both experimentally and mathematically; apply the second law of thermodynamics to evaluate the free energy of reaction and relate the dependence of free energy on enthalpy and entropy changes; evaluate spontaneity of</p>	<p>produce examples of its relation to the mole concept; anticipate changes of state; calculate concentration; predict and justify the effect of changing concentration on the colligative properties of solutions; predict the voltage using the Nernst equation and use this to compare chemical cells; illustrate physical and chemical dynamic equilibrium concepts; calculate equilibrium constants and apply Le Chatelier's principle to predict the effect of changes on systems; demonstrate reactant order, rate constants, and reaction rate laws, calculate the rate of reaction and predict the effect of temperature on rate changes; demonstrate applications of Hess's Law both experimentally and mathematically; apply the second law of; identify spontaneous reactions; perform all calculations with attention given to significant figures based on precision of measured values; demonstrate correct use of logarithmic and exponential relationships; evaluate experiments for calculating molar masses; identify weak electrolytes and explain</p>	<p>changes of state; calculate concentration and explain the effect of changing concentration on the colligative properties of solutions; identify oxidation numbers for ions and for any element in a compound to calculate the electron movement in a redox reaction and calculate the voltage using the Nernst equation; explain the physical and chemical dynamic equilibrium concepts; calculate equilibrium constants and apply Le Chatelier's principle; determine reactant order, rate constants, and reaction rate laws, calculate the rate of reaction and describe the effect of temperature on rate changes; determine the heat of formation, heat of reaction, heat of vaporization and heat of fusion; match applications of Hess's Law; use the second law of thermodynamics; perform most calculations with attention given to significant figures, precision of measured values, and the use of logarithmic and exponential relationships; calculate molar masses identify weak electrolytes;</p>	<p>to the mole concept; define changes of state; calculate concentration and describe the effect of changing concentration on the colligative properties of solutions; use oxidation numbers for ions and for elements in a compound to calculate the electron movement in a redox reaction and calculate the voltage using the Nernst equation; describe the physical and chemical dynamic equilibrium concepts; calculate equilibrium constants and recognize applications of Le Chatelier's principle; estimate reactant order, rate constants, and reaction rate laws, calculate the rate of reaction and describe the effect of temperature on rate changes; match applications of Hess's Law; state the second law of thermodynamics; calculate the free energy of formation, describe the dependence of free energy on enthalpy and entropy changes; perform most calculations with attention given to significant figures, precision of measured values, and the use of logarithmic and exponential relationships; identify</p>	<p>match concentration with the effect of changing concentration of the colligative properties of solutions; use oxidation numbers for ions and for elements in a compound to calculate the electron movement in a redox reaction and match the voltage using the Nernst equation; define physical and chemical dynamic equilibrium concepts; calculate equilibrium constants and Chatelier's principle; match reactant order, rate constants, or reaction rate laws, calculate the rate of reaction and describe the effect of temperature on rate changes; recognize Hess's Law; recognize the dependence of free energy on enthalpy or entropy changes; perform calculations and match results to those expressed to correct significant figures, precision of measured values; use logarithmic and exponential relationships; match molar masses; name some weak electrolytes; define pH, pOH, pK, K_a, K_b, K_w, K_{sp}; calculate pH and pOH; measure pH with indicator papers or electronic meters; identify</p>
---	--	--	---	---

<p>reactions; perform all calculations with appropriate significant figures; justify significant figures based on precision of measured values; demonstrate correct use of logarithmic and exponential relationships; design and evaluate experiments for calculating molar masses; identify weak electrolytes and justify why they are weak; calculate and explain the relationships among pH, pOH, pK, K_a, K_b, K_w, ionization constant, percent ionization, K_{sp}; recognize salts that undergo hydrolysis, write a reaction for the ion with water and justify your choices, experimentally; interpret a titration curve to identify the equivalence point; appraise the effect of a buffer on an aqueous system; predict values for theoretical yield and to evaluate reactants to determine which is limiting and which is in excess in a given chemical reaction; design an experiment to justify results; determine percent yield and discuss sources of experimental error; evaluate organic structures and compounds based on functional groups.</p>	<p>what distinguishes them as weak; define pH, pOH, pK, K_a, K_b, K_w, ionization constants, percent, ionization, K_{sp}; calculate pH and pOH; recognize salts that undergo hydrolysis and write a reaction for the ion with water and interpret a titration curve to identify the equivalence; interpret the effect of a buffer on an aqueous system; predict values for theoretical yield and to evaluate reactants to determine which is limiting and which is in excess in a given chemical reaction; explain how choices could be determined experimentally; differentiate, classify and characterize simple organic functional groups and compounds.</p>	<p>define pH, pOH, pK, K_a, K_b, K_w, K_{sp}; calculate pH and pOH; measure pH with indicator papers and electronic meters; recognize salts that undergo hydrolysis and match the reaction for the ion with water and interpret a titration curve to identify the equivalence point; examine the importance of a buffer; perform stoichiometric calculations to produce values for theoretical yield and to decide the limiting reactant of a given chemical reaction; recognize and classify simple organic functional groups.</p>	<p>calculate molar masses identify weak electrolytes; define pH, pOH, pK, K_a, K_b, K_w, K_{sp}; calculate pH and pOH; measure pH with indicator papers and electronic meters; recognize salts that undergo hydrolysis and match the reaction for the ion with water and interpret a titration curve to identify the equivalence point; perform stoichiometric calculations to produce values for theoretical yield and to decide the limiting reactant of a given chemical reaction; identify simple organic functional groups and compounds.</p>	<p>the equivalence point on a titration curve; given the identity of the limiting reactant, calculate theoretical yield, or given amounts of reactants, decide the limiting reactant of a given chemical reaction; match simple organic functional groups and compounds.</p>
<p>Objectives Students will</p>				

SC.O.CII.2.1	identify types of binding forces such as: ionic, covalent, metallic, and van der Waals forces (including London) and relate binding forces to state, structure, and properties of matter.
SC.O.CII.2.2	investigate the valence bond including the concepts of hybridization of orbitals, resonance, and formation of sigma and pi bonds and demonstrate an understanding of the VSEPR theory.
SC.O.CII.2.3	interpret the ideal gas laws on the basis of the kinetic-molecular theory.
SC.O.CII.2.4	relate Avogadro's hypothesis and its relation to the mole concept.
SC.O.CII.2.5	define changes of state, including critical temperatures and triple points, based on the kinetic molecular theory.
SC.O.CII.2.6	calculate concentration and explain the effect of changing concentration on the colligative properties of solutions.
SC.O.CII.2.7	identify oxidation numbers for ions and for any element in a compound to calculate the electron movement in a redox reaction and calculate the voltage using the Nernst equation.
SC.O.CII.2.8	explain physical and chemical dynamic concepts; calculate equilibrium constants K_p , K_c , K_{sp} , K_a , and apply Le Chatelier's principle.
SC.O.CII.2.9	use experimental data and graphical analysis to determine reactant order, rate constants, and reaction rate laws, calculate the rate of reaction and explain the effect of temperature on rate changes.
SC.O.CII.2.10	determine the heat of formation, heat of reaction, heat of vaporization and heat of fusion; apply Hess's Law.
SC.O.CII.2.11	using the second law of thermodynamics, calculate the free energy of formation, free energy of reaction and the dependence of free energy on enthalpy and entropy changes.
SC.O.CII.2.12	perform all calculations with attention given to significant figures, precision of measured values, and the use of logarithmic and exponential relationships.
SC.O.CII.2.13	calculate molar masses from gas density, freezing-point, and boiling-point measurements.
SC.O.CII.2.14	identify weak electrolytes; define pH, pOH, pK_a , pK_b , K_w , K_a , K_b , K_{sp} , ionization constant, percent ionization, K_{sp} ; calculate pH and pOH; measure pH with indicator papers and electronic meters; recognize salts that undergo hydrolysis and write a reaction for the ion with water and interpret a titration curve to identify the equivalence point don't forget buffers.
SC.O.CII.2.15	perform stoichiometric calculations to produce values for theoretical yield and to decide the limiting reactant of a given chemical reaction.
SC.O.CII.2.16	recognize simple organic functional groups and classify simple organic compounds by name.

<p>Objectives Students will</p>				
SC.O.ES.2.1	identify and describe the structure, origin, and evolution of the lithosphere, hydrosphere, atmosphere and biosphere.			
SC.O.ES.2.2	analyze seismic, density, gravity, and magnetic data to explain the structure of the earth.			
SC.O.ES.2.3	characterize the eras, epochs and periods in relation to earth history and geologic development.			
SC.O.ES.2.4	analyze radiometric dating and rock and fossil evidence to determine the age of substances.			
SC.O.ES.2.5	use chemical and physical properties to distinguish between common minerals and explain their economic uses.			
SC.O.ES.2.6	use rock characteristics to predict paleoenvironments or geologic conditions which existed during the formation of a given rock sample.			
SC.O.ES.2.7	investigate and describe the properties of water, which contribute to its critical role in physical and chemical weathering.			
SC.O.ES.2.8	compare and contrast the effectiveness of agents and processes of degradation, i.e., <ul style="list-style-type: none"> • weathering by gravity, • wind, • water, • ice. 			
SC.O.ES.2.9	predict geologic activity associated with specific plate boundaries and interactions.			
SC.O.ES.2.10	analyze modern and historical seismic information to determine epicenter location and magnitude of earthquakes.			
SC.O.ES.2.11	evaluate current explanations for mechanisms, which drive the motion of plates (convection, slab-pull, plate push).			
SC.O.ES.2.12	relate the effect of degradation and tectonic forces on the earth's surface features, i.e., <ul style="list-style-type: none"> • weathering, • physical features of the ocean floor, 			

	<ul style="list-style-type: none"> • life with the oceans.
SC.O.E.S.2.13	construct and/or interpret information on topographic maps.
SC.O.E.S.2.14	identify and describe chemical and physical properties of oceans, i.e., <ul style="list-style-type: none"> • composition, • currents, • physical features of the ocean floor.
SC.O.E.S.2.15	compare and contrast characteristics of the various oceans, including their lateral and vertical motions.
SC.O.E.S.2.16	analyze the evolution of the ocean floor including ocean crust, sedimentation, active and passive continental margins.
SC.O.E.S.2.17	examine the stratification of the oceans, i.e., <ul style="list-style-type: none"> • temperature, • salinity zones, • biological zones.
SC.O.E.S.2.18	investigate to explain heat transfer in the atmosphere and its relationship to meteorological processes (e.g., pressure, winds, evaporation, condensation, or precipitation).
SC.O.E.S.2.19	predict the effects of ocean currents on climate.
SC.O.E.S.2.20	use meteorological evidence and weather maps (including air masses, wind, barometric pressure, and temperature data) to forecast weather.
SC.O.E.S.2.21	examine global change over time, i.e., <ul style="list-style-type: none"> • climatic trends, • global warming, • ozone depletion.
SC.O.E.S.2.22	apply Newton's Law of Universal Gravitation to the motion of celestial objects to explain phenomenon observed in the sun-earth-moon system.
SC.O.E.S.2.23	analyze several origin theories of the solar system and universe and use them to explain the celestial bodies and their movements.
SC.O.E.S.2.24	compare ancient and modern methods of studying and uses for astronomy (e.g., calendar, navigation).
SC.O.E.S.2.25	use various wavelengths of the electromagnetic spectrum to investigate the observable universe.
SC.O.E.S.2.26	compare the relationship between earth processes and natural disasters with their impact on humans.
SC.O.E.S.2.27	evaluate the potential conflicts, which arise between societal reliance on natural resources and the need to act as responsible stewards to reclaim the earth, including disposal of hazardous and non-hazardous waste.
SC.O.E.S.2.28	research alternative energy sources and evaluate the ecological, environmental and economic cost-benefit ratio.

Objectives				
SC.O.ES.3.1	Students will synthesize concepts across various science disciplines to better understand the natural world (e.g., form and function, system, or change over time).			
SC.O.ES.3.2	investigate, compare and design scientific and technological solutions to address personal and societal problems.			
SC.O.ES.3.3	communicate experimental designs, results and conclusions using advanced technology tools.			
SC.O.ES.3.4	collaborate to present research on current environmental and technological issues and predict possible solutions.			
SC.O.ES.3.5	explore occupational opportunities in science, engineering and technology and evaluate the required academic preparation.			
SC.O.ES.3.6	given a current science-technology-societal issue, construct and defend potential solutions.			

Human Anatomy and Physiology Content Standards and Objectives

Human Anatomy and Physiology is an advanced course that is an elective designed for those students wanting a deeper understanding of the structure and function of the human body. The body will be viewed as a whole using anatomical terminology necessary to describe location. Focus will be at both micro and macro levels reviewing cellular functions, biochemical processes, tissue interactions, organ systems and the interaction of those systems as it relates to the human organism. Systems covered include integumentary, skeletal, muscular, respiratory, circulatory, digestive, excretory, reproductive immunological, nervous and endocrine. This course will develop 21st century skills and be appropriate for college bound students as well as those choosing a health services career cluster. Students will engage in active inquiries, investigation, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Objectives Students will				
SC.O.HAP.2.1	apply directional terminology (proximal, dorsal, medial, lateral, visceral, superficial, deep, etc.) to locate human body structures.			
SC.O.HAP.2.2	describe the organizational levels, interdependency and the interaction of cells, tissues, organs, and organ systems.			
SC.O.HAP.2.3	categorize, by structure and function, the various types of human tissue (e.g., muscle, epithelial, connective, or nervous).			
SC.O.HAP.2.4	relate the structure of the integumentary system to its function as a sensory organ, environmental barrier and temperature regulator.			
SC.O.HAP.2.5	relate how bone tissue is important to the development of the human skeleton.			
SC.O.HAP.2.6	correlate the structure and function of the elements of the skeletal system (bone, articulations and insertions).			
SC.O.HAP.2.7	model the mechanisms of muscular contraction on the cellular and molecular levels.			
SC.O.HAP.2.8	integrate the skeletal, muscular and nervous systems to the functioning of the organism.			
SC.O.HAP.2.9	model the muscular system including locations, origins, insertions, muscle groups and types of muscles.			
SC.O.HAP.2.10	classify the various types of neurons emphasizing the relationship of structure and function.			
SC.O.HAP.2.11	model the mechanism of a nerve impulse at the cellular and molecular levels.			
SC.O.HAP.2.12	compare and contrast the parts and functions of the central and peripheral nervous system including the autonomic portions.			
SC.O.HAP.2.13	apply the structure of the ear and eye to their function/dysfunction in relation to environmental perception.			
SC.O.HAP.2.14	apply the action of specific enzymes to their roles in bodily functions.			
SC.O.HAP.2.15	incorporate the role of endocrine glands and their hormones into the overall functions and dysfunctions of the body.			
SC.O.HAP.2.16	analyze the role of components and processes of the digestive system in supplying essential nutrients.			

SC.O.HAP.2.17	explain how structures of the respiratory system are essential to cellular respiration, gas exchange and communication.
SC.O.HAP.2.18	illustrate the structure of the circulatory and lymphatic systems and the function of blood to the role of transportation, cellular support and defense.
SC.O.HAP.2.19	compare the compatibility of blood types and assess the molecular basis for blood functions.
SC.O.HAP.2.20	integrate the functions of the excretory system to the maintenance of the other body systems.
SC.O.HAP.2.21	compare and contrast the structure and function of male and female reproductive systems.
SC.O.HAP.2.22	outline the events of reproduction for the formation of gametes through fertilizations and embryological development.
SC.O.HAP.2.23	assess the role of components of the immune system in defending the body.
SC.O.HAP.2.24	research disease causative factors, symptoms, prevention and treatment.

SC.O.HAP.3.6	given a current science-technology-societal issue, construct and defend potential solutions.

Physics Content Standards and Objectives

Physics is an advanced level course that is an elective designed for students desiring a broader, in-depth study of the content found in the science field of physics. As a college preparatory course, Advanced Physics is a laboratory driven, advanced study of nature's universal laws with emphasis on process skills, using 21st century skills. This course is designed to build upon and extend the Physics concepts, skills, and knowledge from the science program. The course emphasizes a mathematical approach to the areas of kinematics, dynamics, thermodynamics, light and optics, electricity and magnetism and modern physics. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

---	---	--	---	--

<p>caused by Doppler shift and interpret the results; differentiate mathematically the properties concave or convex mirrors or lenses; construct and analyze electrical circuits and calculate Ohm's law problems for complete circuits; calculate kilowatt-hours for an alternating current and determine the cost of using that current; apply knowledge of projectile motion to determine horizontal and vertical velocities and/or distances.</p>	<p>construct and analyze electrical circuits and calculate Ohm's law problems for complex circuits; calculate power of direct and alternating current using resistance, current and voltage; determine the forces acting on the projectile.</p>	<p>an approaching or receding source in wave propagation; apply ray optics diagrams to lenses and mirrors; use the lens/mirror equation and the magnification equation to solve optics problems; construct and analyze electrical circuits and calculate Ohm's law problems for series and parallel circuits; distinguish between direct and alternating current and identify ways of generating each type; analyze the motion of a projectile.</p>	
Objectives			
Students will			
SC.O.P.2.1	construct and interpret graphs of position versus time, velocity versus time and acceleration versus time.		
SC.O.P.2.2	appraise data, either textbook generated or laboratory collected, for motion in one and/or two dimensions, then select the correct mathematical method for communicating the value of unknown variables.		
SC.O.P.2.3	develop solutions for multi-step problems involving velocity, acceleration, momentum and net force.		
SC.O.P.2.4	interpret graphical, algebraic and/or trigonometric solutions to prove the values for vector components and resultants.		
SC.O.P.2.5	justify Newton's Laws of Motion in terms of equilibrium and net force situations.		
SC.O.P.2.6	evaluate the conservation of energy and momentum and deduce solutions for elastic and inelastic collisions.		
SC.O.P.2.7	assess the magnitude of buoyant force on submerged and floating objects.		
SC.O.P.2.8	compare the pressure exerted by a fluid to the depth of an object in the fluid.		
SC.O.P.2.9	anticipate the effects of Bernoulli's principle on fluid motion.		
SC.O.P.2.10	examine the reflective, refractive and diffractive properties of mechanical and transverse waves.		
SC.O.P.2.11	perform calculations to determine wavelength, frequency, velocity or energy of a wave.		
SC.O.P.2.12	compare and contrast the physical properties of mechanical and transverse waves.		
SC.O.P.2.13	research applications of Doppler shift in determining an approaching or receding source in wave propagation.		
SC.O.P.2.14	apply ray optics diagrams to lenses and mirrors; use the lens/mirror equation and the magnification equation to solve optics problems.		
SC.O.P.2.15	justify the image results obtained by diagramming the ray optics of lenses and mirrors and/or by deducing the image information from the lens/mirror equation.		
SC.O.P.2.16	construct and analyze electrical circuits and calculate Ohm's law problems for series and parallel circuits.		
SC.O.P.2.17	distinguish between direct and alternating current and identify ways of generating each type.		

SC.O.P.2.18 analyze the motion of a projectile.

SC.O.P.3.1	synthesize concepts across various science disciplines to better understand the natural world (e.g., form and function, systems, or change over time).			
SC.O.P.3.2	investigate, compare and design scientific and technological solutions to address personal and societal problems.			
SC.O.P.3.3	communicate experimental designs, results and conclusions using advanced technology tools.			
SC.O.P.3.4	collaborate to present research on current environmental and technological issues to predict possible solutions.			
SC.O.P.3.5	explore occupational opportunities in science, engineering and technology and evaluate the required academic preparation.			
SC.O.P.3.6	given a current science-technology-societal issue, construct and defend potential solutions.			

Conceptual Physics Content Standards and Objectives

Conceptual Physics is an advanced level course that is an elective designed for students who desire a physics course that will prepare them for technical careers. This course is an alternative to the traditional mathematical approach to physics. This approach covers the physics principles in a traditional sequence with an emphasis on conceptual understanding. While mathematics is de-emphasized, laboratory work will require traditional physics measurements to be made. Emphasis will be on the concepts that underlie the natural laws of the universe. Students will engage in active inquiries, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

Physics II Content Standards and Objectives

Physics II advanced level course that is an elective designed for students who have completed Physics and desire a broader, in-depth study of physics content beyond those studied in Physics. As a college preparatory course, Physics II is a laboratory driven, advanced study of nature's universal laws with emphasis on process skills, using 21st century skills. This course is designed to build upon and extend the Physics concepts, skills, and knowledge from the science program. The course emphasizes a mathematical approach to the area of mechanics, thermodynamics, light and optics, electricity and magnetism and modern physics. Students will engage in active inquires, investigations, and hands-on activities for a minimum of 50% of the instructional time to develop conceptual understanding and research/laboratory skills. Safety instruction is integrated into all activities. The West Virginia Standards for 21st Century Learning include the following components: 21st Century Content Standards and Objectives and 21st Century Learning Skills and Technology Tools. All West Virginia teachers are responsible for classroom instruction that integrates learning skills, technology tools and content standards and objectives.

describe electromagnetic induction; investigate the applications of semiconductors and superconductors in the advancement of electronics through the development of diodes, transistors, and integrated circuits; calculate the kinetic and/or potential energies of the oscillating system; list wave properties and their interactions; list optical and acoustical devices and identify the property that is the basis of the device; arrange the models of the atom historically, list evidence for the historical development of the quantum mechanical theory; calculate an atom's binding energy; define stable and unstable nuclei and list types of decay that the unstable nuclei could display.</p>
--	--	--	--	--

<p>advancement of electronics through the development of diodes, transistors, and integrated circuits; assess and contrast the kinetic and potential energies and energy transformations of different oscillating systems; evaluate wave properties and their interactions; predict how optical and acoustical devices will incorporate new materials to improve their effectiveness; appraise the role of technology in the development of historical models of the atom; summarize and critique evidence for the historical development of the quantum mechanical theory; justify an atom's binding energy as related to Einstein's special theory of relativity, and interpret the nuclear forces present; categorize nuclei based on their placement on the periodic table and proton to neutron ratio to demonstrate different types of decay processes.</p>	<p>through the development of diodes, transistors and integrated circuits; compare and contrast the kinetic and potential energies and energy transformations of different oscillating systems; analyze wave properties and their interactions; compare and contrast optical and acoustical devices for their effective application of wave properties; analyze the role of technology in the development of historical models of the atom; categorize evidence for the historical development of the quantum mechanical theory; analyze an atom's binding energy as related to Einstein's special theory of relativity, and interpret the nuclear forces present; using the proton to neutron ratio, predict the type of nuclear decay that could occur for nuclei.</p>	<p>knowledge of simple harmonic motion to calculate the kinetic and potential energies of the oscillating system; examine wave properties and their interactions; evaluate the application of wave properties of the development of optical and acoustical devices; critique the role of technology in the development of historical models of the atom; examine evidence for the historical development of the quantum mechanical theory; calculate an atom's binding energy as related to Einstein's special theory of relativity, and interpret the nuclear forces present; differentiate between stable and nuclear nuclei, and if the nucleus is unstable predict the type(s) of nuclear decay.</p>	<p>properties to the development of optical and acoustical devices; research the development of historical models of the atom; describe evidence for the historical development of the quantum mechanical theory; calculate an atom's binding energy as related to Einstein's special theory of relativity; differentiate between stable and unstable nuclei and list types of decay that the unstable nuclei could display.</p>
<p>Objectives Students will</p>			
<p>SC.O.P.II.2.1</p>	<p>apply graphical analysis to interpret motion in terms of position, velocity, acceleration, and time.</p>		
<p>SC.O.P.II.2.2</p>	<p>use data to deduce mathematical relationships involving one and two dimensional motion.</p>		
<p>SC.O.P.II.2.3</p>	<p>experimentally verify laws of motion including Newton's Laws, Conservation of Momentum (linear and angular), and Conservation of Energy.</p>		
<p>SC.O.P.II.2.4</p>	<p>using knowledge of linear motion equations, synthesize concepts of rotational motion (e.g., angular speed and acceleration, centripetal acceleration, Newtonian gravitation, Kepler's Laws, torque).</p>		
<p>SC.O.P.II.2.5</p>	<p>predict and verify the effect of variables on the properties and dynamics of fluids.</p>		

SC.O.PII.2.6	interpret and apply concepts of thermal physics (e.g., distinction of heat and temperature, thermal expansion, properties of ideal Gases, Kinetic Theory, specific heat, and energy transfer).
SC.O.PII.2.7	deduce the relative values of electric force and field strength based on the magnitude of and the distance from the point charge (e.g., Coulomb's Law and inverse square law).
SC.O.PII.2.8	construct, diagram and evaluate complex electrical circuits.
SC.O.PII.2.9	predict and interpret magnetic forces and magnetic fields, and apply their effect on the motion of a point charge and to the electric current in a wire or coil.
SC.O.PII.2.10	critique electromagnetic induction and evaluate its application to electric circuits and various devices.
SC.O.PII.2.11	investigate, analyze, and evaluate the concepts of solid-state physics and the application of semiconductors and superconductors in the advancement of electronics through the development of diodes, transistors, and integrated circuits.
SC.O.PII.2.12	apply knowledge of simple harmonic motion (e.g., springs, pendulums and other oscillating objects) to calculate the kinetic and potential energies of the oscillating system.
SC.O.PII.2.13	examine wave properties and their interactions (e.g., reflection, refraction, dispersion, total internal deflection, interference, diffraction, Doppler Shift, beats, and polarization).
SC.O.PII.2.14	evaluate the application of wave properties to the development of optical and acoustical devices.
SC.O.PII.2.15	critique the role of technology in the development of historical models of the atom (e.g., radioactivity, atomic spectra, particle accelerators, etc.).
SC.O.PII.2.16	examine evidence for the historical development of the quantum mechanical theory (e.g., Planck's blackbody radiation, Einstein's photoelectric effect, deBroglie's duality).
SC.O.PII.2.17	calculate an atom's binding energy as related to Einstein's special theory of relativity, and interpret the nuclear forces present.
SC.O.PII.2.18	differentiate between stable and unstable nuclei, and if the nucleus is unstable predict the type(s) of nuclear decay.

High School	Physics II
Standard 3	Application of Science
SC.S.PII.3	<p>Students will</p> <ul style="list-style-type: none"> demonstrate the ability to use inquiry process to explore systems, models, and changes. demonstrate an understanding of the interdependence between science and technology. demonstrate an understanding of the utilization of technology to gather data and communicate designs, results and conclusions. demonstrate an understanding of personal and societal benefits of science, and an understanding of public policy decisions as related to health, population, resource and environmental issues.
Performance Descriptors SC.PD.PII.3	
Distinguished	Above Mastery
Physics II students at the distinguished level will construct, test and analyze complex systems, models, and changes across science disciplines; use a	Physics II students at the above mastery level will construct, test and analyze data to explore systems, models and changes across science disciplines; analyze
Mastery	Partial Mastery
Physics II students at the mastery level will test, record and analyze data to explore systems, models, and changes; analyze a technological innovation	Physics II students at the partial mastery level will test and record data to explore systems, models, and changes; explain a technological innovation
Novice	Novice
Physics II students at the novice level will test and record data to explore systems, models or changes; identify a technological innovation	

technology solution and analyze the science used in the technology; evaluate how a scientific discovery impacts public policy decisions regarding health, population resources and environmental issues.	technological innovations and identify the science that makes them possible; evaluate the personal and societal benefits of a scientific discovery; assess the impacts of a public policy decision regarding health, population resources or environmental issues.	and identify the science that makes it possible; assess positive outcomes and unintended consequences of a scientific discovery; explain the impacts of a public policy decision regarding health, population resources or environmental issues.	and identify the science that makes it possible; identify positive outcomes and unintended consequences of a scientific discovery; identify the impact of a public policy decision regarding health, population resources or environmental issues.	and the science that makes it possible; identify positive outcomes or unintended consequences of a scientific discovery; identify the impact of a public policy decision regarding health, population resources or environmental issues.
Objectives Students will				
SC.O.PII.3.1	synthesize concepts across various science disciplines to better understand the natural world (e.g., form and functions, systems, or change over time).			
SC.O.PII.3.2	investigate, compare and design scientific and technological solutions to address personal and societal problems.			
SC.O.PII.3.3	communicate experimental designs, results and conclusions using advanced technology tools.			
SC.O.PII.3.4	collaborate to present research on current environmental and technological issues to predict possible solutions.			
SC.O.PII.3.5	explore occupational opportunities in science, engineering and technology and evaluate the required academic preparation.			
SC.O.PII.3.6	given a current science-technology-societal issue, construct and defend potential solutions.			

FISCAL NOTE FOR PROPOSED RULES

Rule Title: **W. Va. 126CSR44R, Policy 2520.35 Science 9-12 Content Standards and Objectives for West Virginia Schools**

Type of Rule: Legislative Interpretive Procedural

Agency: West Virginia Board of Education

Address: Capitol Building 6, Room 608

 1900 Kanawha Boulevard, East

 Charleston, WV 25305

Phone Number: 304.558.5325

Email: mburke@access.k12.wv.us

Fiscal Note Summary

Summarize in a clear and concise manner what impact this measure will have on costs and revenues of state government.

No costs or revenues will be impacted by the proposed amendment of W. Va. 126CSR44R, Policy 2520.35 Science 9-12 Content Standards and Objectives

Fiscal Note Detail

Show over-all effect in Item 1 and 2 and, in Item 3, give an explanation of Breakdown by fiscal year, including long-range effect.

FISCAL YEAR			
Effect of Proposal	Current Increase/Decrease (use "-")	Next Increase/Decrease (use "-")	Fiscal Year (Upon Full Implementation)
1. Estimated Total Cost	0	0	0
Personal Services	0	0	0
Current Expenses	0	0	0
Repairs & Alterations	0	0	0
Assets	0	0	0
Other	0	0	0
2. Estimated Total Revenues	0	0	0

Rule Title: **W. Va. 126CSR44R, Policy 2520.35 Science 9-12 Content Standards and Objectives for West Virginia Schools**

Rule Title: W. Va. 126CSR44R, Policy 2520.35 Science 9-12 Content Standards and Objectives for West Virginia Schools

3. **Explanation of above estimates (including long-range effect);**
Please include any increase or decrease in fees in your estimated total revenues.

No costs or revenues will be impacted by the proposed amendment of W. Va. 126CSR44R, Policy 2520.35 Science 9-12 Content Standards and Objects for West Virginia Schools.

MEMORANDUM

Please identify any areas of vagueness, technical defects, reasons the proposed rule **would not** have a fiscal impact, and/or any special issues **not** captured elsewhere on this form.

When Policy 2520.35 was last submitted to the WV Board of Education for approval, we submitted a cash estimate of \$2,250,000 due to increased science graduation requirements. However these revisions will not impact costs and revenues.

2/14/09	Name: Linda Geronilla, Ph.D. Organization: WV State University	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives</p> <hr/> <p>When looking at the physics content I noticed that most of the curriculum was based on Newtonian physics which is now outdated and very little was dedicated to quantum physics which is now the growing research. If we want our children to think innovatively then we need to teach content that is on the cutting edge to challenge them.</p> <p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Biology Content Standards and Objectives</p> <hr/> <p>Everything in the curriculum was dedicated to allopathic anatomy and physiology. Nothing in the biological sciences was dedicated to CAM (complementary and alternative energy systems). Over 1/3 of consumers are now using CAM techniques to stay healthy. National Institute of Health's CAM division has biofields (meridians, chakras, auras, etc.) on its web site and has grants for research in these fields. 21st century skills are suppose to embrace the diversity of cultures to emphasize a global economy in which our students are going to have to compete. I'd be glad to help</p>	NA-	Ninth Grade Physical Science is an introduction course to the physical sciences. Quantum physics is addressed in the physics, conceptual physics and physics II.

		<p>develop this section. I teach a class for WVUSU on healing energy systems from other cultures. Linda Geronilla, Ph.D. 304 741-3433 or 342-2260</p>	
2/17/09	<p>Name: Stefan L Smolski Organization: Oak Glen High School</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives</p> <p>As a teacher who has taught this course since its days as CATS 9, these changes to Ninth Grade Physical Science represent a significant upgrade to the current CSO's. I welcome the changes and improvements as written as they allow the content to more easily be adapted to the use of research based instructional techniques such as PBL, UbD-DI, and case-based reasoning. This will not require any changes to the way that I currently teach the course. Thanks.</p>	<p>N+</p> <p>This is supportive of our changes.</p>
2/20/09	<p>Name: Tina Coo Organization: Preston High School</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Biology Content Standards and Objectives</p> <p>I am pleased to see that the biology CSOs are more specific in nature. The bullets under the CSO covering the specific topic make it easier to verify in our lesson plans. Thank you for summarizing and make the performance descriptors shorter and more precise.</p> <p>I am not sure if one CSO does justice for covering the topic of organ structure and functions.</p>	<p>N+</p> <p>NA-</p> <p>This is the design that the committee felt was user friendly for teachers.</p> <p>The rigor and relevance of the CSO will require additional time for all of the learning targets in the CSO to be addressed.</p>
3/2/09	<p>Name: Lenora Richardson Organization: Cabell County Schools</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives</p> <p>Check for "site" in Above Mastery. Should be "cite"</p> <p>Due to the changes expected in creating depth of</p>	<p>A+</p> <p>NA-</p> <p>Typing error has been corrected.</p> <p>This would require a</p>

		<p>knowledge and rigor using PBL or Quad D lesson, the Earth Science objectives need to be removed from the Physical Science curriculum. There is just not enough time to teach all the current CSO's at the level needed. Earth science standards are taught at all preceding grade levels and students who wish to do so have the opportunity to take the Earth Science course later in high school.</p> <p>Teacher have stated the way the performance descriptors are written is confusing. Is there not a better format that could be used? Bullets or separating the statements with double spacing?</p>	A+	<p>rewriting of the WESTEST 2.</p> <p>A committee has been working on changing this and policy will be resubmitted to the State Board requesting to make these suggested changes.</p>
3/2/09	<p>Name: tiffani Smith Organization: Cabell County Schools</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives</p> <p>You need to remove the earth science cso's. There are too many to cover if we are expected to teach 21st century skills. We cannot do project based learning and webquests, ect, if we have to cover so many cso's. You need to take away some if we are to teach the students any in depth knowledge of science. If we have to cover so many, we can only skim the surface.</p>	NA-	<p>This would require a rewriting of the WESTEST 2.</p>
3/2/09	<p>Name: Rebekka McDaniel Organization: Cabell County Schools</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives</p> <p>I feel that Earth Science could be cut out of the content and the students would not miss it. It is covered in primary and intermediate grades and offered again in 11/12th grade and there are not as many fields of study after high school that require in depth earth science. We are expected to prepare the students for chemistry which is now a requirement and to take them further into physics. These concepts are more difficult to teach because thier math skills are still not strong, so it takes longer then in theory to teach the concepts of</p>	NA-	<p>This would require a rewriting of the WESTEST 2.</p>

		<p>chemistry and physics even if its not to a deep understanding. I really enjoy doing Project based learning and labs, I find that I am rushing through these lessons though to fit everything in. I feel its too much.</p> <p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Biology Content Standards and Objectives</p> <p>I think biology should be taught in the 9th grade, Chemistry in the 10th grade and physics in the 11/12th grade. Our 9th graders really need that extra year of math to complete the calculations for physics and chemistry.</p>	NA-	Policy 2510 identifies the target populations for these courses.
3/5/09	<p>Name: Patricia Williams Organization: Roane County High School</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives</p> <p>I feel that there are Content Standards that have no business in the Physical Science area and would be better served to be in Biology and or Earth Science. The standards in question are: SCOPS 2.20 composition and age of the Earth, SCOPS 2.21 weather forecasting, SCOPS 2.22 surface features relating to climatic conditions, SCOPS 2.25 origin and configuration of solar system. If we are going to teach the individual sciences then put these where they belong not overlapping in an attempt to integrate science.</p>	NA-	This would require a rewriting of the WESTEST 2.
3/5/09	<p>Name: Elizabeth Richardson Organization: Capital High School</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives</p> <p>It is very heavy in the Earth Sciences. Focus should be more toward purely physical science</p> <p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for</p>	NA-	This would require a rewriting of the WESTEST 2.

		<p>West Virginia Schools at Biology Content Standards and Objectives</p> <hr/> <p>Biology and Conceptual Biology is very close and should be considered the same class.</p>	NA-	<p>A percentage of these course CSOs must be the same for the creation of the WESTEST2 the course difference is in the rigor and relevance of the courses.</p>
3/5/09	<p>Name: Jenny Nash Organization: Cabell County Schools</p>	<p>Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Conceptual Biology Content Standards and Objectives</p> <hr/> <p>Biology and Conceptual Biology content is very close and should be considered the same class or acceptable for college bound track.</p>	NA-	<p>A percentage of these course CSOs must be the same for the creation of the WESTEST2 the course difference is in the rigor and relevance of the courses. Higher Education makes the determination of what courses they will accept admission.</p>
3/6/09	<p>Name: Marsha Crowe Organization: Riverside HS</p>	<p>I feel that the Earth science standards need to be removed from the curriculum in ninth grade. There is not enough time to complete these standards on top of the chemistry and physic based standards. Now that all students will be required to take chemistry as 11th graders, we must hit the chemistry objectives harder to prepare students. Also, students have already covered these same Earth science standards in middle grades.</p>	NA-	<p>This would require a rewriting of the WESTEST 2.</p>

Comments for section 126-44R-1 General

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

I feel that the Earth science standards need to be removed from the curriculum in ninth grade. There is not enough time to complete these standards on top of the chemistry and physic based standards. Now that all students will be required to take chemistry as 11th graders, we must hit the chemistry objectives harder to prepare students. Also, students have already covered these same Earth science standards in middle grades.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

It is very heavy in the Earth Sciences. Focus should be more toward purely physical science

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Biology Content Standards and Objectives

Biology and Conceptual Biology is very close and should be considered the same class.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Conceptual Biology Content Standards and Objectives

Biology and Conceptual Biology content is very close and should be considered the same class
or acceptable for college bound track.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

I feel that there are Content Standards that have no business in the Physical Science area
and would be better served to be in Biology and or Earth Science. The standards in question
are: SCOPS 2.20 composition and age of the Earth, SCOPS 2.21 weather forecasting, SCOPS 2.22
surface features relating to climatic conditions, SCOPS 2.25 origin and configuration of
solar system. If we are going to teach the individual sciences then put these where they
belong not overlapping in an attempt to intergrate science.

Comments for section 126-44R-1 General

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

I feel that Earth Science could be cut out of the content and the students would not miss it. It is covered in primary and intermediate grades and offered again in 11/12th grade and there are not as many fields of study after high school that require in depth earth science. We are expected to prepare the students for chemistry which is now a requirement and to take them further into physics. These concepts are more difficult to teach because thier math skills are still not strong, so it takes longer then in theory to teach the concepts of chemistry and physics even if its not to a deep understanding. I really enjoy doing Project based learning and labs, I find that I am rushing through these lessons though to fit everything in. I feel its too much.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives for West Virginia Schools at Biology Content Standards and Objectives

I think biology should be taught in the 9th grade, Chemistry in the 10th grade and physics in the 11/12th grade. Our 9th graders really need that extra year of math to complete the calculations for physics and chemistry.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

You need to remove the earth science cso's. There are too many to cover if we are expected
to teach 21st century skills. We cannot do project based learning and webquests, ect, if we
have to cover so many cso's. You need to take away some if we are to teach the students any
in depth knowledge of science. If we have to cover so many, we can only skim the surface.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

Check for "site" in Above Mastery. Should be "cite"

Due to the changes expected in creating depth of knowledge and rigor using PBL or Quad D lesson, the Earth Science objectives need to be removed from the Physical Science curriculum. There is just not enough time to teach all the current CS0's at the level needed. Earth science standards are taught at all proceeding grade levels and students who wish to do so have the opportunity to take the Earth Science course later in high school.

Teacher have stated the way the performance descriptors are written is confusing. Is there not a better format that could be used? Bullets or separating the statements with double spacing?

I am pleased to see that the biology CSOs are more specific in nature. The bullets under the CSO covering the specific topic make it easier to verify in our lesson plans. Thank you for summarizing and make the performance descriptors shorter and more precise.

I am not sure if one CSO does justice for covering the topic of organ structure and functions.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

As a teacher who has taught this course since its days as CATS 9, these changes to Ninth Grade Physical Science represent a significant upgrade to the current CSO's. I welcome the changes and improvements as written as they allow the content to more easily be adapted to the use of research based instructional techniques such as PBL, UbD-DI, and case-based reasoning. This will not require any changes to the way that I currently teach the course. Thanks.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Ninth Grade Physical Science Content Standards and Objectives

When looking at the physics content I noticed that most of the curriculum was based on Newtonian physics which is now outdated and very little was dedicated to quantum physics which is now the growing research. If we want our children to think innovatively then we need to teach content that is on the cutting edge to challenge them.

Comments for section 126-44R 21st Century Science 9-12 Content Standards and Objectives
for West Virginia Schools at Biology Content Standards and Objectives

Everything in the curriculum was dedicated to allopathic anatomy and physiology. Nothing in the biological sciences was dedicated to CAM (complementary and alternative energy systems). Over 1/3 of consumers are now using CAM techniques to stay healthy. National Institute of Health's CAM division has biofields (meridians, chakras, auras, etc.) on its web site and has grants for research in these fields. 21st century skills are suppose to embrace the diversity of cultures to emphasize a global economy in which our students are going to have to compete. I'd be glad to help develop this section. I teach a class for WVSU on healing energy systems from other cultures.

Subject: Policy 2520 Explanation of Terms
Attachments: Policy 2520 Explanation of Terms.docx

I have attached the pages we need to change at the beginning of each content area Policy 2520 when these go to the board. The changes are all additions and I have underlined the changes for your review. Please review these pages and make sure we have taken care of addressing the changes we have made to this point.

Thanks!

Carla

Explanation of Terms

Content Standards are broad descriptions of what students should know and be able to do in a content area. Content standards describe what students' knowledge and skills should be at the end of a K-12 sequence of study.

Objectives are incremental steps toward accomplishment of content standards. Objectives are listed by grade level and are organized around the content standards. Objectives build across grade levels as students advance in their knowledge and skills.

Performance Descriptors describe in narrative format how students demonstrate achievement of the content standards. Line brakes within the narrative format indicate clusters of concepts and skills. West Virginia has designed five performance levels: distinguished, above mastery, mastery, partial mastery and novice. Performance Descriptors serve two functions. Instructionally, they give teachers more information about the level of knowledge and skills students need to acquire. Performance levels and descriptors are also used to categorize and explain student performance on statewide assessment instruments.

Distinguished: A student at this level has demonstrated exemplary performance. The work shows a distinctive and sophisticated application of knowledge and skills that go beyond course or grade level applications .

Above Mastery: A student at this level has demonstrated effective performance and exceeds the standard. The work shows a thorough and effective application of knowledge and skills.

Mastery: A student at this level has demonstrated adequate knowledge and skills that meet the standard. The work is accurate, complete and fulfills all requirements. The work shows solid academic performance at the course or grade level.

Partial Mastery: A student at this level has demonstrated limited knowledge and skills toward meeting the standard. The work shows basic but inconsistent application of knowledge and skills characterized by errors and/or omissions. Performance needs further development.

Novice: A student at this level has demonstrated minimal fundamental knowledge and skills needed to meet the standard. Performance at this level is fragmented and/or incomplete and needs considerable development.

Numbering of Standards

The number for each content standard is composed of four parts, each part separated by a period:

- the content area code is RLA for Reading and English Language Arts,
- the letter S, for Standard,
- the grade level (exceptions are Journalism and Speech I), and
- the standard number.

Illustration: RLA.S.4.1 refers to fourth grade reading and English language arts content standard #1.

Numbering of Objectives

The number of each objective is composed of five parts, each part separated by a period:

- the content area code (RLA for Reading and English Language Arts),
- the letter O is for Objective,
- the grade level (exceptions are Journalism and Speech I),
- the number of the content standard addressed, and
- the objective number.

Illustration: RLA.O.6.2.3 refers to a reading and English language arts sixth grade objective that addresses standard #2 in reading and English language arts, the third objective listed under that standard.

Numbering of Performance Descriptors

The number for each group of three performance descriptors is composed of four parts, each part separated by a period:

- the content area (RLA for Reading and English Language Arts),
- the letters PD are for Performance Descriptors,
- the grade level (See exceptions noted above for grade level under numbering of objectives), and
- the standard number.

Illustration: RLA.PD.9.2 refers to reading and English language arts performance descriptors for ninth grade, content standard #2.

Unique Electronic Numbers (UENs)

Unique Electronic Numbers (or UENs) are numbers that help to electronically identify, categorize and link specific bits of information. Once Policy 2520.1 is available on the Web, each standard, each objective and each group of five performance descriptors will have a Unique Electronic Number (UEN) that will always remain the same.

The codes printed in Policy 2520.1 form the basis of the UENs. The only additional set of numbers that will be added to each code to formulate its UEN will be a prefix that indicates the year and month that a particular version of Policy 2520.1 is approved by the State Board of Education.

The prefix for the UENs for each content area in Policy 2520.1 is noted at the top of each page containing standards, objectives and performance descriptors. As sections of 2520.1 are revised, UENs will be changed to reflect the new approval date.

UENs (Unique Electronic Numbers) are unique numbers that facilitate implementation of WV Standards into Electronic formats such as Databases and XML Files. The WV Department of Education encourages everyone who is going to use the WV 21st Century Content Standards in any kind of electronic distribution, alignment, or software development to use the UENs so that all efforts can be cross-referenced and there is consistency across initiatives.

Illustration: The UEN for fifth grade reading and English language arts standard #2 will be "200602.RLA.S.5.2".
